GETTING TO KNOW YOUR CAMERA

1. ATTACHING THE CAMERA STRAP
   Thread the short loop of the strap under the Strap Post (11); pull the long loop through the short loop and pull it tight.

2. LOADING THE BATTERY
   This camera uses a 3-volt lithium KODAK K123LA (or equivalent) Battery that supplies power for all camera operations.
   NOTE: This camera automatically turns off after approximately 3 minutes to conserve battery energy.

3. LOADING THE FILM
   If in sunlight, turn your back to the sun and load the film into the shade of your body.
   1. Slide the Film-Door Latch (9) down to open the Film Door (20).
   2. Insert the flat end of the film cartridge over the Film Spindle (23). Push the other end of the film cartridge down into the Film Chamber (24) until it snaps into place. Do not force it into the film chamber.
   3. Pull out the film leader until the tip reaches the Film-Load Mark (21). Lay the film flat between the film-guide rails.
   4. Close the film door. The film automatically advances to the first frame and the LCD Panel (3) displays “8.” Do not open the film door after you start taking pictures or you will ruin the film.

4. TAKING PICTURES
   1. Press the On/Off Button (2) to turn the camera ON. When you turn the camera on, the lens cover automatically opens.
   2. Hold the camera steady. Be careful not to cover the flash, lens, and auto-focus windows with your fingers.
   3. Slide the panoramic switch down to return to the normal position.
   4. Load Mark

Using the Focus Lock
This camera automatically focuses on whatever is within the auto-focus brackets of the Viewfinder eyepiece. If you want to take a picture with the subject positioned outside of the auto-focus brackets, use the auto-focus lock as follows:
1. Place the auto-focus brackets on the subject you want focused in the picture.
2. Partially depress and hold the Shutter Button (1) to lock the focus.
3. While still partially depressing the shutter button, move the camera until your subject is where you want it within the Viewfinder Eyepiece (15).

Battery Tips
• Keep a spare battery with you at all times. Lithium batteries perform consistently until they suddenly die.
• Read and follow all warnings and instructions supplied by the battery manufacturer.
• Keep batteries away from children.
• Do not try to take apart, recharge or short circuit the battery, or subject it to high temperature or fire.
• Store batteries in their original packaging prior to use.

Low-Battery Indicator
It’s time to replace the battery when—
• the Battery Symbol (31) appears on the LCD Panel (3);
• the battery symbol on the LCD panel “blinks...”;
• none of the indicators appear on the LCD panel.

NOTE: Your model camera has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits provide reasonable protection against harmful interference in a residential environment. This equipment generates, uses and can radiate radio frequency energy and, if not used in accordance with the instructions, may cause interference to radio communications. There is no guarantee that interference will not occur. If this camera does cause interference to radio or television reception, which can be determined by turning the camera off and on, you may reduce the interference by the following:
• Remotely or relocate the receiving antenna.
• Increase the separation between the camera and the receiver.
• Consult the dealer or an experienced radio/television technician for help.

Chances or modifications not approved by the party responsible for compliance could void the user’s authority to operate the equipment.

SPECIFICATIONS
Type: Compact, auto-focus 35 mm camera
LCD Panel: Display indicators for red-eye reduction, fill-flash/flash-charging, flash-off, infinity-focus, self-timer, and the frame number and battery symbol
Lenses: 28 mm, f/4.5, 3-element glass lens
Focus System: 4 zone active infrared AF system with focus lock, optional infinity-focus mode
Viewfinder: Reverse-Galilean with bright line field of view and frame number and battery symbol
Film Speed: DX (ISO) 100 – 1000 for color or black-and-white print film
DX (ISO) 100 – 200, 400, 800, 1000 for black-and-white print film
Flash: Electronic with ISO 100/21˚, guide number of 26 ft (8 m); flash automatically turns on at low-light levels
Film-Load Mark

4 TAKING PICTURES

(Continued)

Using the Self-Timer

1. When you want to include yourself in the picture, use the self-timer feature.
2. Use the Tripod Socket (19) to attach the camera to a tripod, or place the camera on another firm support.
3. Press the On/Off Button (2) to turn the camera ON.
4. Press the Shutter Button (1) to take the picture.

NOTE: If you want to stop the self-timer operation before the picture is taken, press the self-timer button or turn the camera off.

Using the Infinity-Focus Mode

1. Press the Shutter Button (1) to take the picture.
2. To cancel the red-eye-reduction feature, turn the camera off or press the mode-selection button to return to the auto-flash-standby position.

NOTE: When you take flash pictures using this feature, the camera fires a short flash before the picture is taken. The subject's eye pupil closes partially to reduce the red-eye effect.

Using the Fill Flash and Flash Off

Fill Flash — Bright light outdoors or indoors from backgrounds that can cause dark shadows (especially on faces) in high-contrast scenes. Use fill flash to lighten these shadows.

Flash Off — When you do not want to use the flash, especially indoors where flash is prohibited such as in theaters and museums, or in dim lighting situations, use flash off. Use a tripod (Tripod Socket (19)) or place the camera on another firm support.

1. Press the On/Off Button (2) to turn the camera ON.
2. Press the Self-Timer Button (6). The Self-Timer Indicator (28) appears on the LCD Panel (3) and the Self-Timer Lamp (12) glows red.
3. Compose your picture and press the Shutter Button (1). The Self-timer lamp "blinks" approximately 10 seconds before the picture is taken. After you take the picture, the self-timer automatically turns off.

Using the Red-Eye Reduction

Some people’s eyes (and some pets’) can reflect flash light with a red glow. To minimize red eye in flash or fill-flash pictures, use the red-eye-reduction feature.

1. Press the On/Off Button (2) to turn the camera ON.
2. Press the Mode-Selection Button (4) once to move to the infinity-focus position. Make sure the Red-Eye-Reduction Indicator (32) appears on the LCD Panel (3).

Using the Slow Shutter

1. If you want to take pictures on the entire roll of film, you can automatically rewind the film by pressing the Rewind Button (9).

Using the Rewind Button 9.55

1. Press the Mode Button (b) to select the desired data type. To take the picture. Following the exposure, the Print Indicator (4) blinks in the lower left corner for approximately two-to-three seconds to confirm imprinting.

NOTE: The imprinted data may be difficult to read if the subject area over which it is superimposed is bright or non-uniform. If the data panel is considered too dark, reduce the date-back battery (see Replacing the Date-Back Battery below).

Replacing the Date-Back Battery

1. Press the Mode Button (b) to the red-eye-reduction position. Make sure the Red-Eye-Reduction Indicator (32) appears on the LCD Panel (3).
2. Press the Shutter Button (1) to take the picture.

NOTE: The camera automatically returns to the auto-flash-standby position after you take the picture.

TROUBLESHOOTING

What happened Probable cause Solution

Camera will not operate Power off Press on/off button

Flash not ready Wait for the flash-charging indicator on LCD panel to stop blinking

Film not loaded See LOADING THE FILM

There are no more pictures remaining Remove the film

LCD panel is blank Battery weak, dead, missing, or improperly inserted Replace or reload the battery, see LOADING THE FILM

Warranty Information

This Warranty applies only to cameras purchased in the United States.

Warranty coverage

If this camera does not function properly within the warranty period, upon submission of a copy of a dated sales receipt (keep the original for your records), Kodak will repair it without charge.

How to obtain service

For assistance in using the camera, contact a dealer in Kodak products. For service on this camera, return it through a dealer in Kodak products, or call 1 (800) 242-2424 for the authorized warranty repair location nearest you. When sending a camera for service, enclose a note giving the complete name and address and phone number where you can be reached during the day to help the repair location return the camera promptly.

Limitations

This warranty does not apply to the battery used in this camera.

This warranty does not cover circumstances beyond Kodak's control, nor problems caused by failure to follow the care and operation instructions in the manual.

Warranty service will not be provided without a copy of a dated sales receipt (always keep the original for your records).

Kodak makes no other express warranty for this product.

Repair and the option of replacement or refund, in the event that Kodak is unable to repair the camera, are Kodak's only obligations. Kodak will not be responsible for any consequential or incidental damages resulting from the loss of this camera, regardless of the cause of such damages.

Your rights under state law

Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion of liability may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Outside the United States

In countries other than the United States, the terms of this warranty may be different. Unless a specific Kodak warranty is communicated to the purchaser in writing by a Kodak company, no warranty or liability exists beyond any minimum requirements imposed by law, even though defect, damage, or loss may be by negligence or other act.
