Getting the camera ready

Load batteries
Open the battery compartment. Slide the cover lock to the unlocked position and push forward to open. Insert four AA batteries into the compartment.

Do not mix old batteries with new batteries, or different manufacturer’s batteries together.

To extend battery life, use the AC adapter whenever possible or purchase rechargeable batteries.

Connect one end of the AC adapter to the AC power connector on the camera. Connect the other end to a grounded electrical outlet.

Attach wrist strap
Attach the wrist strap to the camera as shown.

Insert memory card
Turn the camera power off. Insert the memory card into the slot (with the label side of the card facing the rear of the camera). Use the clip to remove the memory card from the camera.

Do not insert or remove the memory card while the camera power is on.

You must insert the memory card before you can turn on the camera.

Taking photos
You can take a photo using the optical viewfinder or the LCD display.

Use the optical viewfinder to save battery power.

Attach the wrist strap to the camera as shown.

Transferring photos to your computer
The are two ways of transferring digital photos to your computer.

RS-232 Serial port connection.

To connect using the serial cable
1 Turn off your computer and all peripherals (scanner, printer).
2 Connect the serial cable to the serial port on the camera and then to your computer.
3 Connect the AC adapter to the AC power connection on the camera.
4 Plug the AC adapter into a grounded electrical outlet.
5 Turn on your computer.
6 Turn on your camera.
7 Double click the Polaroid PhotoMAX icon on your desktop.

USB port connection. USB supported only for Windows 98.

To connect using the USB cable
1 Connect the USB cable to the USB port on the camera and then to your computer.
2 Connect the AC adapter to the AC power connection on the camera.
3 Plug the AC adapter into a grounded electrical outlet.
4 Turn on your computer.
5 Double click the Polaroid PhotoMAX icon on your desktop.

Press shutter button half-way to focus.

Frame photo using optical viewfinder or LCD display.

Flash range = 3ft -10 ft
(1m - 3m)

The red LED light appears and the photo appears on the LCD display while it processes. Wait until the image is fully processed before taking another photo.

The green LED light appears. The camera is now focused and ready to take a photo.

Wait until the green LED light appears. The camera is now focused and ready to take a photo.

4 Hold the camera steady and press the shutter button down firmly.

The red LED light appears and the photo appears on the LCD display while it processes. Wait until the image is fully processed before taking another photo.

The green LED light appears. The camera is now focused and ready to take a photo.

Wait until the green LED light appears. The camera is now focused and ready to take a photo.

1 Slide the power switch up to turn on the camera.
2 Slide the LCD display switch up to turn on the LCD display if needed.
3 Wait until the flash has charged. The flash icon blinks on the Status panel display while the flash is charging. You cannot take a photo while the flash is charging.

Press shutter button half-way to focus.

Use the LCD display to frame photos when using the Macro lens setting. See the User’s Guide (included in kit) for more information on changing camera settings. Insert memory card
Turn the camera power off.
Insert the memory card into the slot (with the label side of the card facing the rear of the camera). Use the clip to remove the memory card from the camera.

Do not insert or remove the memory card while the camera power is on.

You must insert the memory card before you can turn on the camera.
