Important note
This manual explains how to safely operate the VPC-S6.

Please read these instructions carefully before using the camera. Make sure to read and understand the separate booklet “SAFETY MANUAL”. Keep this manual in a safe place for later reference.
Warning
TO PREVENT THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT
EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE

FOR AMERICAN USERS
The following advisory is included in accordance with the laws of the State of California (USA):

WARNING:
This product contains chemicals, including lead, known to the State of California to cause cancer, birth defects or other reproductive harm. Wash hands after handling.

• This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
  • Reorient or relocate the receiving antenna.
  • Increase the separation between the equipment and receiver.
  • Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
  • Consult the dealer or an experienced radio/TV technician for help.
• Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Declaration of Conformity
Model number: VPC-S6
Trade Name: SANYO
Responsible party: SANYO FISHER COMPANY
Address: 21605 Plummer Street, Chatsworth, California 91311
Telephone No.: (818) 998-7322
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.
FOR CANADIAN USERS

- This Class B digital apparatus complies with Canadian ICES-003.

FOR EU USERS

Note:
- This symbol mark and recycle system apply only to EU countries and do not apply to countries in other areas of the world.

Your SANYO product is designed and manufactured with high quality materials and components which can be recycled and reused. This symbol means that electrical and electronic equipment, at their end-of-life, should be disposed of separately from your household waste. Please dispose of this equipment at your local community waste collection/recycling centre. In the European Union there are separate collection systems for used electrical and electronic products. Please help us to conserve the environment we live in!

Symbols used in this manual

HINT Points giving some extended instructions or special points to pay attention to.

CAUTION Points that require special attention.

(page xx) Refer to the page indicated for detailed information.

You may find the answers to questions or problems concerning camera operation in the sections “COMMONLY ASKED QUESTIONS” (page 128) and “TROUBLESHOOTING” (page 134).
GETTING UP AND RUNNING

Install the battery

1. Open the battery/card cover, and insert the batteries.
   - The battery/card cover is located on the bottom of the camera.

2. Press the ON/OFF button to turn the camera on.
   - The Still Image Shooting Screen appears.
Shooting

Still image photography

1 Press the shutter button.
   • The image is captured.

Video clip recording

1 Press the MENU button, and press the [►] button.
   • The camera changes to the video clip recording mode.

2 Press the MENU button.

3 Press the shutter button.
   • Recording begins.
   • To stop recording, press the shutter button again.
   • Press the MENU button, press the [◄] button, and press the MENU button. The camera changes to the still image shooting mode.

CAUTION
This camera does not record sound.
• For video clip playback, only video data is played back.
Playback

Still image playback

1 Press the playback button [►].
   • The display switches to the Playback Screen.
   • To view other images, press the [◄] or [►] button.
   • If the playback button [►] is pressed, the display returns to the Shooting Screen.

Video clip playback

1 Press the playback button [►].
   • The display switches to the Playback Screen.
   • Press the [◄] or [►] button to display the video clip you wish to play back.
   • Video clips are indicated by a video clip pattern along the top and bottom of the screen.

2 Press the SET button.
   • Playback of the selected video clip begins.
   • If the playback button [►] is pressed again, the display changes to the Shooting Screen.

When you are finished taking pictures...

Press the ON/OFF button to turn the camera off.
QUICK SEARCH BY OPERATION

Your camera has an abundance of convenient features and functions. From creating precisely the photo you want, to viewing images using various techniques, you can locate the exact operation for your purposes in the following table.

CHECKING THE INCLUDED ACCESSORIES

- Handstrap: 1

- SANYO Software Pack (CD-ROM): 1

- AA alkaline batteries: 2 (batteries made exclusively to be used as included accessories)

- Dedicated USB interface cable: 1

- “SAFETY MANUAL” (safety precautions booklet) Please read this booklet carefully before using the digital camera.

- Quick Guide
Attaching the handstrap

Media cards that can be used with this camera

The types of card that can be inserted into and used with this camera are:
- SD Memory Card
- Multi Media Card

What “card” means in this manual

- In this manual, SD Memory Cards and Multi Media Cards that can be used in this digital camera are referred to as “card”.
- The cards in the illustrations in this manual are SD Memory Cards, but all installation, removal, and formatting procedures are the same for both SD Memory Cards and Multi Media Cards.
GETTING THE MOST OUT OF YOUR CAMERA

Your camera can take still photos and record video clips. It’s loaded with lots of functions that are possible only in a digital camera, including a super-quick focus, an easy-to-understand guidance display on a large screen, a more extensive Scene Select feature, and more.

You’ll never miss a photo opportunity, thanks to the quick focus: Touch focus (see page 22)

Just touch the shutter button lightly, and the touch sensor automatically focuses the image (touch focus).
Mode Select Screen
Switch between the still photo shooting and video clip recording modes with a single on-screen action. Accessing the Shooting Setting Screen has never been so fast.
SYSTEM MAP

The included accessories can be used to connect your camera to a computer or printer. By connecting the camera to your computer, you can, for example, copy your photos to the computer’s hard disk. You can connect it to a printer for direct printing of your photos. Or take the card to a photo shop to have your photos printed there.

- Dedicated USB interface cable
- Computer
- Printer
- AC adaptor (sold separately)

- Separately sold or commercially available SD Memory Card/Multi Media Card
- Internet
- Card reader
- DPOF-compatible printer
- Photo shop

- [▼] button
- SET button
- [▼] button
- Access light
- [◄] button

Bottom

- Battery/card cover
- DC IN terminal
  - Use only the SANYO-specified AC adaptor.
- Tripod stand hole
INSTALLING THE CARD AND BATTERIES

Your camera has an internal 15MB memory, which means that you can take photos (record image data) even when no card is installed. By using a card, however, you will be able to take many more photos. The card can be used after it has been formatted with the camera (page 113).

1. **Open the battery/card cover.**
   - While gently pressing the battery/card cover, slide it open.

2. **Insert the card.**
   - Firmly insert the card until it clicks into place.
INSTALLING THE CARD AND BATTERIES

3 Insert the batteries.
   • Make sure that the batteries’ polarities (+ and −) are correct.

4 Close the battery/card cover.

When removing the card...
   • To remove the card, press it down, and then release. The card will protrude slightly, and you can then pull it out.
CAUTION

Be careful when removing the card.

- Do not attempt to forcibly remove the card.
- Never remove the card when the access light is flashing quickly. In doing so, you risk losing the data stored in the card.

Manganese batteries cannot be used.

- Not only do manganese batteries have a short battery life, but there is the danger of their overheating and causing damage to the digital camera.

Other batteries

- If you wish to use batteries other than the alkaline batteries (LR6), we recommend the following.
  - AA-size nickel metal hydride (NiMH) batteries (SANYO HR-3UF) × 2
  - AA-size Ni-Cd batteries (SANYO N-3UV) × 2

  When installing the batteries, make sure that they are oriented correctly.

Do not open the battery/card cover when the camera is turned on.

- If the battery/card cover is opened while the power is on, important data may be lost. Sanyo Electric shall not be held responsible for any losses that result from failure to comply with this warning.

HINT

Shooting without a card installed

- The camera has a 15MB internal memory that lets you photograph and play back images even when there is no card installed. When the camera is turned on with no card installed, the internal memory icon 📸 is shown on the LCD monitor to let you know that the images you capture will be saved to the camera’s internal memory.

About the internal backup battery

- This camera’s internal battery serves to maintain the date and time settings, as well as the shooting settings. The backup battery will be fully charged when the batteries are kept in the camera continuously for about 2 days. In the fully charged state, the backup battery will maintain the camera settings for about 7 days.

When not using the camera for a long time, remove the batteries.

- A small amount of power is still used even if the camera is turned off, and it is therefore recommended that the batteries be removed from the camera if it is not going to be used for a long time. Note that when the batteries are removed for a long period, the time and date settings may be cleared. Before using your camera again, be sure to confirm that the camera settings are correct.
TURNING THE CAMERA ON AND OFF

Turning on the camera

In the shooting mode

1. Press the ON/OFF button.
   - The camera turns on.
   - The camera turns on in the shooting mode that was active before it was last turned off.

In the playback mode

1. Press the playback button [▶] for at least one second.
   - The Playback Screen appears on the LCD monitor (page 29).

Turning off the camera

1. Press the ON/OFF button.
   - The camera turns off.
   <If the camera was turned on by pressing the playback button [▶]>
   - When the playback button [▶] or ON/OFF button is pressed, the camera turns off.
Turning on the camera when the power save (sleep) function is active

In order to preserve battery power, the power save (sleep) function will automatically turn off the camera after one minute of no use during shooting, or five minutes of no use during playback (factory-preset setting).

- When the power save function is active, you can restore the power by any of the following methods:
  - Press the playback button [➡].
  - Press the SET or MENU button.
  - Press the shutter button.
  - Press the ON/OFF button.

- When the AC adaptor (sold separately) is connected, the power save function will become active about 10 minutes after the camera is turned on (factory-preset setting).
- The user can specify the time elapsed before the power save function is activated (page 108).
- When the camera is connected to a computer or printer using the dedicated USB interface cable, the power save function is disabled, and the camera turns off after about 12 hours.

HINT
If the 📊 icon appears...

- When a picture is taken, the date and time it was captured is recorded with it. When the date and time cannot be recorded with the image because the date and time have not yet been set (page 19), the 📊 icon appears. To have the date and time recorded with images, please make this setting before capturing images.
DATE AND TIME SETTING

The camera will record the date and time an image is captured so that you can display them during playback. Therefore, before capturing images, make sure the correct date and time are set.

Example: To set the clock to 7:30 p.m. on December 24, 2005

1 Press the ON/OFF button to turn the camera on, and press the MENU button.

2 Press the [▼] button.
   • The Shooting Setting Screen appears (page 47).

3 Display the Option Screen (page 98).

4 Press the [▲] or [▼] button to select the clock set icon ◇, and press the SET button.
   • The Clock Set Screen appears.
   • The current date and time settings are shown.
   • Follow the procedures below to enable or disable the date display during playback, to set the display format for the date, and to set the date and time.
   • To return to the Option Screen, press the MENU button, or select “EXIT” and press the SET button.
5 Set the date.
   ① Select “DATE”.
   ② Press the SET button.
      • The Set Date Screen appears.
   ③ Set the date to “2005/12/24”.
      • The date is set in the following order: Set the year → Set the month → Set the day.
      • Press the [◄] or [►] button to select the year, month or day. Press the [▲] or [▼] button to increase or decrease the number.
   ④ Press the SET button.

6 Set the time.
   ① Select “TIME”.
   ② Press the SET button.
      • The Set Time Screen appears.
   ③ Set the time to “19:30”.
      • The time is set in the following order: Set the hour → Set the minute.
      • A 24-hour clock is used for the time display.
   ④ Press the SET button.

7 Set the order in which the date is displayed during playback.
   ① Select “DISP”.
   ② Press the SET button.
      • The Set Date Format Screen appears.
   ③ Press the [▲] or [▼] button.
      • Press the [▲] button to change the displayed date order as follows:
        year/month/day → month/day/year → day/month/year → DISP OFF (no display)
      Press the [▼] button to change it in the reverse order.
DATE AND TIME SETTING

- If “DISP OFF” is selected, the date the image was captured is not shown during playback.

4 Press the SET button.

8 Select “EXIT”, and press the SET button.
  - The date and time setting is completed, and you are returned to the Option Screen.
  - To return to the Shooting Screen, press the MENU button.

HINT

- Under normal conditions, while the batteries are being replaced, an internal battery will maintain the date and time settings. However, there is a small chance the settings may be lost. (The backup will last for about 7 days.) It is recommended to check that the date and time settings are still correct after replacing the batteries and before shooting or recording of any type (follow steps 1 and 4).

To correct the date and time settings

- After steps 1 and 4, select the line of the setting that you want to change, press the SET button, and follow the steps in the respective paragraphs above to change the setting.
BEFORE TAKING PICTURES

How to hold the camera

Hold the camera securely, keeping your elbows close to your body and making sure the camera is stable.

Correct hold

Incorrect hold

A finger is blocking the lens or flash.

Make sure that the lens and flash are not blocked by your fingers or the handstrap.

HINT

- Images captured in the still image shooting mode can be rotated when they are played back (page 84).
- When the optical zoom is used or when the autofocus is operating, the image may appear to waver, but this is not a malfunction.

About the touch sensor (touch focus)

With the touch sensor, the image is focused simply by a light finger-touch on the shutter button (focus lock). With the subject in focus, just gently press the shutter button to take the picture for a perfectly focused image.

At the same time, the touch sensor is temporarily deactivated whenever the Mode Select Screen (page 25) or Shooting Setting Screen (page 47) is displayed, thereby facilitating operation of these screens.

Furthermore, you can also deactivate the touch sensor so that the autofocus operates only when you press the shutter button halfway (page 57).
BEFORE TAKING PICTURES

Using the autofocus

The autofocus will work in almost all situations; however, there are certain conditions that may cause the autofocus function to not work properly. If the autofocus function is not working properly, set the focus range to capture images (page 59).

■ Conditions that may cause incorrect focus
The following examples are some of the situations where the autofocus function may not work.

• **Subjects with low contrast, very bright subjects at the center of the image or dark subjects or locations**
  Use the focus-lock function to lock the focus on an object with contrast at the same distance as the desired subject.

• **Subjects without vertical lines**
  Use the focus-lock function to lock the focus on the subject while holding the camera vertically.
The following examples are some of the situations where the autofocus function may work, but not as desired.

- **When both near and far objects are present**
  Use the focus-lock function to lock the focus on an object at the same distance as the desired subject, then reposition the camera to compose the picture.

- **Fast-moving subjects**
  Use the focus-lock function to lock the focus on an object at the same distance as the desired subject, then reposition the camera to compose the picture.
BEFORE TAKING PICTURES

How to switch the shooting mode

Your camera can both capture still photos (still image shooting mode) and record video clips (video clip recording mode). When shooting, you can switch the shooting mode on the Mode Select Screen.

1  Press the ON/OFF button to turn the camera on, and press the MENU button.
   • The Mode Select Screen appears.

2  Press the [◄] or [►] button.
   • The shooting mode is switched.

3  Press the MENU button.
   • The display changes to the Shooting Screen.
**Hints for taking pictures**

**Muting the operation sounds**
- The operation sounds that are generated, for example, when the shutter button, MENU button or SET button is pressed, can be muted (page 101).

**Where is the image data saved?**
- All the image and sound data is recorded in the camera’s internal memory or on the card installed in the camera.
- When a card is installed in the camera, the data is recorded on the card. If no card is installed, the data is recorded in the camera’s internal memory.

**Taking pictures in backlight conditions...**
- When taking pictures with the light coming from behind the subject, due to the characteristics of the CCD, light lines or ghost patterns (flare phenomenon) may appear in the captured image. In this situation, it is recommended that you avoid taking pictures with the subject lit from behind.

**While the image data is being recorded...**
- While the access light is flashing quickly, the image data is being written to the memory, during which time it is not possible to capture another image. Another image can be captured after the access light turns off. However, even when the access light is flashing, depending on the camera’s internal memory remaining capacity, in some cases the next image can be captured about 2 seconds after shooting.
CAPTURING AND PLAYING BACK STILL IMAGES

There are two modes for capturing still images. In the normal still image mode, one image is captured each time the shutter button is pressed. In the sequential shots mode, when you press the shutter button, several successive images are captured. For more information about taking sequential shots, please see page 64.

**Shooting single shots**

1. Press the ON/OFF button to turn the camera on.
   - The Still Image Shooting Screen appears.

2. Rest your finger on the shutter button.
   - If the touch sensor (page 57) has been set to ON, when the shutter button is touched, the autofocus operates and the image is focused (focus lock).

   <If the touch sensor is set to OFF>
   - Engage the autofocus by pressing the shutter button halfway.

   <Still Image Shooting Screen>
3 Gently press the shutter button.
- Press the shutter button gently, taking care not to move the camera.
- The image that was captured appears on the LCD monitor as long as the shutter button is kept pressed (post view).

4 Release your finger from the shutter button.
- The captured image is recorded.

HINT
What is the camera focusing on?
- A target mark [ ] on the LCD monitor shows the area the camera is focusing on.
- The camera automatically determines the correct focus by measuring from 9 different focus points within the shooting area. If the target mark is at a position that is different from the point you wish to focus on, you can refocus, for example, by changing the shooting angle.
- The large target mark appears when the camera focuses on a wide area in the center of the screen.

About the focus indicator
- A green focus indicator appears when the subject is successfully focused, or a red focus indicator when the camera was not able to focus the subject.

The shutter speed and aperture are displayed
- When the camera focuses and the target mark appears, at the same time, the shutter speed and aperture settings are also displayed. You can use them as a reference when shooting.

If the motion alert icon appears...
- During still image shooting, if the shutter speed is slow and the possibility that the image may be blurred due to camera shake becomes high, the motion alert icon may appear on the LCD monitor. In this case, use a tripod to stabilize the camera when shooting, or set the flash operation mode to automatic (page 37).
- When shooting with the scene select function set to the fireworks mode, the motion alert icon always appears, but this is normal.
CAPTURING AND PLAYING BACK STILL IMAGES

Viewing still images

The steps for viewing both single shots and sequential shots are the same.

5 Press the playback button [▶].
   • If the playback button [▶] was pressed to turn the camera on, however, press the playback button [▶] for at least 1 second.
   • The image most recently captured appears on the LCD monitor.

6 View other images.
   • Press the [◀] or [▶] button to display the previous or next image.
     To display the previous image:
       Press [◀].
     To display the next image:
       Press [▶].
   • To return to Shooting Screen, press the playback button [▶]. (However, if the camera was turned on by pressing the playback button [▶], the camera will turn off.)

When you are finished viewing images...
   • Press the ON/OFF button to turn the camera off.
9-image display playback

1 Press the playback button [▶].

   • The 9-image display appears.

3 Select the image to play back.
   • Press the arrow buttons to move the orange frame to the desired image, and press the SET button.
   • Instead of pressing the SET button, you can press [T] ([ ]) on the zoom switch to show the image full screen.
CAPTURING AND PLAYING BACK STILL IMAGES

Magnifying (zooming in) the image

1 Display the image that you want to magnify.

   • Magnification is enabled.
   • The image is magnified, and the central portion of image is displayed.
   • Press the arrow buttons to view different parts of the magnified image.
     To magnify:
     Magnification increases with each press of [T] ([ ]) on the zoom switch.
     To return to normal size:
     Magnification decreases with each press of [W] ([ ]) on the zoom switch.
   • Press the SET button to return to the normal (100%) view.

HINT
The magnified portion of the image can be saved as a separate image.
• Press the shutter button. The magnified portion is saved as a new still image.
VIDEO CLIP RECORDING AND PLAYBACK

Recording a video clip

1. Press the ON/OFF button to turn the camera on.

2. Press the MENU button.
   • The Mode Select Screen appears.

3. Press the [►] button to select “MOVIE”, and press the MENU button.
   • The Video Clip Recording Screen appears.

4. Press the shutter button.
   • Video clip recording begins. During recording, the recording time is shown on the LCD monitor.
   • It is not necessary to continue pressing the shutter button while shooting.

5. End the recording.
   • Press the shutter button again to stop recording and save the video clip.

CAUTION
• This camera records video signals only; it does not record sound.
Playing back the video clip

6 Press the playback button [▶].
   • If the playback button [▶] was pressed to turn the camera on, however, press the playback button [▶] for at least 1 second.
   • The video clip just recorded appears on the LCD monitor.
   • Video clips are indicated by a video clip pattern along the top and bottom of the screen.

7 Press the SET button.
   • Video clip playback begins.
   • To stop playback, press the SET button again.
Outline of playback operation

</tbody>
</table>

When you are finished viewing video clips...

- Press the ON/OFF button to turn the camera off.
VIDEO CLIP RECORDING AND PLAYBACK

HINT

Adjusting the LCD monitor brightness
• While the Shooting Screen is active, you can quickly access the screen for adjusting the brightness of the LCD monitor by pressing the MENU button for at least 1 second.

Display the video clip playback point
• During video clip playback, press the MENU button for at least 1 second to display a bar showing the current playback point in the video clip.
• Press the MENU button for about 1 second to cancel the bar.

To play back data from the internal memory
• Remove the card from the camera.

CAUTION

If no audio is heard...
• Audio cannot be played back.

The data for a video clip is very large.
• Therefore, be aware that if the video clip is uploaded to a computer to be played back, the computer may not be able to play back the video fast enough, making it appear jerky. (The video will always be displayed properly on the LCD monitor.)

When the remaining card memory becomes 10 percent or less of the total card capacity...
• The remaining memory icon appears on the LCD monitor.
• Depending on the card, shooting may end even before the possible shooting time indicated.
USING THE ZOOM

Your camera has two zoom functions: optical zoom and digital zoom. You can specify whether or not the digital zoom is enabled (page 105).

1  Point the camera lens at the subject.

2  Press the zoom switch to compose the desired image.
   [T]: Zoom in on the subject.
   [W]: Zoom out.
   • When the zoom switch is pressed, the zoom bar appears on the LCD monitor.
   • When the optical zoom factor is at maximum, zooming stops temporarily. When [T] on the zoom switch is pressed again, the mode changes to the digital zoom mode and zooming continues.

3  Take the picture.
FLASH SETTING

The flash is used not only for taking pictures where there is insufficient light, but also when the subject is in shade or in backlight conditions. Your camera’s flash has four modes of operation (automatic flash mode, forced flash mode, flash off mode and red-eye reduction mode). Select the flash mode that is appropriate for the surrounding conditions. The flash can be enabled only when taking single-shot still images.

1 Display the Still Image Shooting Screen (page 27).

2 Press the [▲] ([ ] button.
   - The flash setting changes.
   - The flash setting appears on the LCD monitor.
   - The flash setting can also be changed from the Shooting Screen (page 50).

No flash indication:
The camera will detect the subject brightness and use the flash only when required. In a backlight situation, if only the center of the image is very dark, the flash will operate to compensate (auto flash).

[ ]: The flash will operate with every image captured regardless of the conditions. Use this setting under backlight conditions, when the subject is in shade, under fluorescent lighting conditions, etc. (forced flash).

[ ]: The flash will not operate even in dark situations. Use this setting when capturing an image in a location where flash photography is prohibited, or when shooting a night landscape scene (flash off).

[ ]: The digital camera will detect the subject brightness and use the flash only when required. At this time the flash will operate in a manner that reduces the red reflection (“red-eye”) in the subject’s eyes (red-eye reduction).
3 Press the [▲] ([ ] button to set the flash mode.
   • Each time the [▲] ([ ]) button is pressed, the flash mode changes.
   • Display the icon for the desired flash mode.

4 Press the shutter button.
   • The picture is snapped and the flash operates according to the selected mode.

HINT
In the automatic flash mode...
   • In the automatic flash mode, when the subject is in focus, a [ ] icon appearing on the LCD monitor indicates that the flash will operate.
EXPOSURE CORRECTION

When capturing images, you can make the image lighter or darker.

1  Point the camera lens at the subject.
   • If the Mode Select Screen or a menu screen (Shooting Setting Screen) is active, press the MENU button to exit it.

2  With the Shooting Setting Screen not showing, press the [ ] button.
   • The exposure correction bar appears.

3  Press the [ ] or [ ] button to adjust the exposure.
   • The exposure setting numerical value is shown at the left end of the exposure bar. The exposure can be set to a value from –1.8EV to +1.8EV.
   • To cancel the exposure correction bar, press the MENU button.
   • The exposure correction setting can also be accessed from the Shooting Setting Screen (page 52).

HINT
The exposure correction setting is canceled in the following cases:
• When the pointer is set to the center position.
• When the Option Screen is accessed.
• When the playback button [ ] is pressed.
• After the power is turned off.
EASY SETTINGS SCREEN

With the Easy Settings Screen, it’s a cinch to get beautiful photos every time, simply by selecting the setting that matches your shooting conditions.

1. Press the ON/OFF button to turn the camera on, and press the MENU button.
   - The Mode Select Screen appears.

2. Press the [◄] or [►] button to select the desired shooting mode.

3. Press the [▲] button.
   - The Easy Settings Screen appears.
   - Press the [▲] or [▼] button to choose either the scene select menu or the filter menu.

To exit the Easy Settings Screen
Press the MENU button to return to the Mode Select Screen. Press the MENU button again to return to the Shooting Screen.
OVERVIEW OF THE EASY SETTINGS SCREEN

1 Scene select menu (page 42)
   - AUTO: Full auto photography
   - Sports photography
   - Portrait photography
   - Landscape photography
   - Night view photography (Available only when shooting single shots)
   - Fireworks photography (Available only when shooting single shots)

   - No filter
   - Cosmetic filter
   - Monochrome filter
   - Sepia filter
   - Sharpness filter
   - Contrast filter
   - Color filter

3 Remaining battery power (page 117)

4 HELP display (page 103)
SCENE SELECT

You can select from various preset settings (aperture, shutter speed, etc.) for specific shooting conditions.

1. Display the Easy Settings Screen (page 40).

2. Select the scene select menu.

- **AUTO**: The camera automatically makes the optimum settings suitable for the surrounding conditions (full auto).
- ** şiţ**: Capture a split-second image of a fast-moving subject (sports mode).
- ** şt**: Enhance the 3D feeling of the subject by blurring the background (portrait mode).
- ** şt**: For beautiful shots of distant scenery (landscape mode).
- ** şt**: Photograph the subject while keeping the background night scenery (night view mode).
- ** şt**: For capturing fireworks at night (fireworks mode).
SCENE SELECT

3 Select the desired icon from the scene select menu, and press the SET button.
   • This completes the scene select setting.

4 Take the picture.
   For video clip recording, see page 32.
   For still image shooting, see page 27.
   • To return to normal photography, select AUTO from the scene select menu, and press the SET button.
Scene select and operation mode

The scene select functions that are available depend on the active operation mode (page 63).

O: Available  —: Not available

**CAUTION**

- When capturing images using the fireworks 🌡️ or night view 🌃 setting, use a tripod or other method to stabilize the camera.
- A table showing the limitations for settings corresponding to scene select icons other than **AUTO** is on page 139.
FILTERS

The filter feature changes image characteristics such as color tones, to apply unique effects to the photographed image.

1 Display the Easy Settings Screen (page 40).

2 Select the filter menu.
   - : No filter is used (none).
   - : Skin tones are enhanced in close-up shots (cosmetic filter).
   - : Snap black-and-white photos (monochrome filter).
   - : Create a sepia-tone photo (sepia filter).
   - : Accentuates the outlines in the image (sharpness filter).
   - : Accentuates the light and dark areas in the image (contrast filter).
   - : Accentuates the colors in the image (color filter).
3 Select the desired icon from the filter menu, and press the SET button.
   • This completes the filter setting.

4 Take the picture.
   For video clip recording, see page 32.
   For still image shooting, see page 27.
   • To return to normal photography, select ☑️ from the filter menu, and press the SET button.

HINT
   • A table showing the limitations for settings corresponding to filter icons other than ☑️ is on page 139.
ACCESSING THE SHOOTING SETTING SCREEN

The Shooting Setting Screen is used to adjust the focus range and self-timer settings; to select the single-shot, sequential shots, composite photo, or ID photo operation mode; and to manage various settings such as turning the shutter button touch sensor ON/OFF.

1. Press the ON/OFF button to turn the camera on, and press the MENU button.
   • The Mode Select Screen appears.

2. Press the [◄] or [►] button to select the desired shooting mode.

3. Press the [▼] button.
   • The Shooting Setting Screen appears.

To cancel the Shooting Setting Screen
Press the MENU button once to return to the Mode Select Screen. Press the MENU button again to return to the Shooting Screen.
Switching the page

The Shooting Setting Screen consists of two pages: PAGE 1 and PAGE 2.

1. Display the Shooting Setting Screen.

2. Press the [◄] button.
   - The Shooting Setting Screen PAGE changes.
   - Each time the [◄] button pressed, the PAGE changes.

---

- When you specify multiple functions that cannot be simultaneously enabled, the function which was last set becomes the active setting, and the other settings accordingly change automatically.
TOUCH SENSOR (TOUCH FOCUS) SETTING

The touch sensor function, by which the autofocus is activated by a finger-touch on the shutter button, can be set to ON or OFF. When the touch sensor function is set to OFF, the autofocus is activated when you press the shutter button halfway; then gently press the shutter button to snap the picture.

1. Display PAGE 1 of the Shooting Setting Screen (page 47).

2. Select the touch sensor menu.
   - The sensor menu appears.
     
     • The touch sensor function is set to ON.
     • The touch sensor function is set to OFF.

3. Select the desired icon, and press the SET button.
   - The selected touch sensor function is set.

CAUTION

• When the camera is attached to a tripod, the touch sensor sensibility may be diminished. This happens because the touch sensor works by detecting changes in the capacitance when the camera is touched with bare hands. The touch sensor sensibility will also be diminished, for example, if you hold the camera with gloved hands.
• When the camera is used near inverter-type fluorescent lights, the touch sensor sensitivity may be diminished.
RESOLUTION SETTING
By setting the image resolution (pixels) to a higher setting, image detail is enhanced for a smoother, finer picture. However, the file size also becomes large and uses more memory. Select the resolution setting that suits your purpose.

1 Display PAGE 1 of the Shooting Setting Screen (page 47).

2 In the still image shooting mode, select the resolution menu; in the video clip recording mode, select the video clip mode menu.
   • The resolution menu or video clip mode menu appears.
   <Still image shooting mode>
   6M-H: Shoot image at 2,816 × 2,112 resolution (low compression)
   10M: Shoot image at 3,680 × 2,760 resolution
   6M-S: Shoot image at 2,816 × 2,112 resolution (standard compression)
   4M: Shoot image at 2,288 × 1,712 resolution
   2M: Shoot image at 1,600 × 1,200 resolution
   0.3M: Shoot image at 640 × 480 resolution
   <Video clip recording mode>
   320: Shoot at 320 × 240 pixels (15 frames/second, standard compression)
   160: Shoot at 160 × 120 pixels (15 frames/second, standard compression)

3 Select the desired icon, and press the SET button.
   • The selected resolution setting or video clip mode setting is set.
FOCUS RANGE

1 Display PAGE 1 of the Shooting Setting Screen (page 47).

2 Select the focus range menu.
   • The focus menu appears.
     - : The camera automatically focuses on the subject within a range of 10 cm (3.94 in.) (Wide end) or 40 cm (15.75 in.) (Tele end) to infinity (autofocus).
     - : You can focus on a subject within a range of 5 cm (1.97 in.) (Wide end) or 40 cm (15.75 in.) (Tele end) to 70 cm (27.56 in.) (macro).
     - : You can focus on a subject in the distance (infinity).
     - : The focus can be manually set to any distance from 5 cm (1.97 in.) to 8 m (26.25 ft), as well as to infinity (manual focus).
     - : The camera continuously focuses on the subject (continuous AF: still image shooting mode only).

3 Select the desired icon, and press the SET button.
   • This completes the focus range setting.

HINT
• When the focus range is set to macro , the zoom is set to the wide end.
• You can also change the focus range setting from the Shooting Screen by pressing the [▼] button.
How to use the manual focus

1 Display PAGE 1 of the Shooting Setting Screen (page 47).

2 Select the manual focus icon \( \text{MF} \) from the focus menu, and press the SET button.

3 Press the SET button.
   • The focus distance adjustment bar appears.

4 Press the [\(<\)] or [\(\rightarrow\)] button to adjust the focus distance, and press the SET button.
   • The focus distance is set, and you are returned to the Shooting Screen.

HINT
About the focus range
• The focus distance indication shows the distance between the lens surface and the subject.
• In some cases there may be a slight variance between the distance (numerical figure) you set in the manual focus mode and the actual distance. Use the LCD monitor to confirm the focus and compose the photo.

About zoom movement when using the manual focus
• If the focus distance is set to 30 cm (11.81 in.) or less, the zoom changes to the largest setting that is suitable for that focus distance.
• When the focus distance is set to 30 cm (11.81 in.) or less, the zoom will function only within the range at which the image is focused.
SELF-TIMER

1 Display PAGE 1 of the Shooting Setting Screen (page 47).

2 Select the self-timer menu.
   • The self-timer icons are shown.
     - OFF: Turns off the self-timer function.
     - 2: The image is captured about 2 seconds after the shutter button is pressed.
     - 10: The image is captured about 10 seconds after the shutter button is pressed.

3 Select the desired icon from the self-timer menu, and press the SET button.
   • This completes the self-timer setting.
HINT

To pause or cancel the self-timer function...

- If the shutter button is pressed again before the shutter is released, the self-timer countdown temporarily stops. Press the shutter button one more time to restart the self-timer.
- To cancel self-timer photography, set the self-timer setting to off  
- After the self-timer picture is snapped, the self-timer is automatically reset to off  

When  is selected...

- When the shutter button is pressed, the self-timer indicator flashes for approximately 10 seconds, after which shooting begins.
- About 3 seconds before shooting, the self-timer indicator flashes faster.
SHUTTER OPERATION SETTING

Select how the camera operates when the shutter button is pressed.

1 Set the camera to the still image shooting mode, and display PAGE 1 of the Shooting Setting Screen (page 47).

2 Select the operation mode menu.
   - : When the shutter button is pressed, a single still image is captured (single shot).
   - : When the shutter button is pressed, several still images are captured in succession (sequential shots).
   - : Successive still images are captured as the exposure changes (bracket series).
   - : Capture a background image and a foreground image, and combine them to create a single image (composite photo).
   - : Take ID photos (ID photos).

3 Select the desired icon, and press the SET button.
   - The selected shutter operation is set.

HINT
Why can’t the flash be enabled?
- The flash cannot be used for sequential shots and bracket series photography.
Shooting sequential shots

When the shutter button is pressed, still images are captured in succession.

1. Select the sequential shots icon from the operation mode menu, and press the SET button.
   - If the resolution is set to $10\text{M}$, the setting changes automatically to $6\text{M-H}$.

2. Press the shutter button to start shooting.
   - Sequential shots shooting begins.
   - Maximum number of sequential shots:
     - $6\text{M-H}$, $6\text{M-S}$: 5 images
     - $4\text{M}$, $2\text{M}$, $0.3\text{M}$: 7 images
   - Note that if the shutter button is released during shooting, shooting stops immediately.
SHUTTER OPERATION SETTING

How to use the auto bracket shots (bracket series) feature

Successive still images are captured as the exposure changes (bracket series).

1. Select the bracket series icon from the operation mode menu, and press the SET button.
   - If the resolution is set to 10M, the setting automatically changes to 6M-H.

2. Press the shutter button.
   - When the shutter button is pressed, shooting begins.
   - It is not necessary to keep the shutter button depressed.
   - During shooting, 7 successive images (or 5 images, if the resolution was set to 6M-H or 6M-L) are captured and shooting ends automatically.
Composite photo

Shoot two separate still images, and combine them to create a composite still image.

1. Select the composite icon  from the operation mode menu, and press the SET button.
   - If the resolution is set to 10M, the setting changes automatically to 6M.

2. Press the SET button again.
   - The frame selection display appears.

3. Press the [◄] or [►] button to select a composite pattern, and press the SET button.
   - The selected frame shape fills the display.

4. Capture the image for the background (frame).
   - Point the lens at the background subject, and snap the picture.

5. Next, capture the image that will be superimposed in the frame.
   - Take the photo of the image inside the frame.
SHUTTER OPERATION SETTING

ID photos
You can create ID photos to use in circulars, ads, and other publications, as well as in identification documents.

1 Select the ID photo icon from the operation mode menu, and press the SET button.

2 Press the MENU button twice.
   • The ID photo outline appears on the LCD display.

3 Align the subject with the ID photo outline, and snap the picture.
   • After the preview screen for the captured image appears, you are returned to the Shooting Setting Screen.
   • Three images are shown in each of two sizes on the Playback Screen.

CAUTION
Restrictions regarding sequential shots, composite photos, and ID photos
• The resolution setting is not available for sequential shots. In addition, the flash cannot be used.
• The resolution setting is not available for composite photos. In addition, the macro focus range is not available, and the self-timer cannot be used.
• The resolution setting is not available for ID photos. In addition, the macro and distant object focus ranges are not available.
FOCUS AREA SETTING

You can choose from the following 2 types of autofocus (still image shooting only):

9-point range finder focus: The correct focus is determined from 9 different focus points within the shooting area visible on the LCD monitor. When the image is focused, a target mark [ ] appears.

Spot focus: The camera focuses on the subject in the center of the LCD monitor.

1 Display the Shooting Setting Screen (page 47).

2 Select the focus mode menu.
   - The focus mode menu appears.
     - [9-AF]: 9-point range finder focus is selected.
     - [S-AF]: Spot focus is selected.
   - When the spot focus setting is selected, the focus mark [ ] appears in the center of the LCD monitor.

3 Select the desired icon, and press the SET button.
   - The focus area is set.
LIGHT-MEASURING MODE SETTING

You can select from 3 types of light-measuring modes.

**Multi-section light-measuring:**
The exposure is adjusted after sampling from multiple areas of the entire shooting screen.

**Center-weighted light-measuring:**
The exposure is adjusted after light is measured from the entire image, but with emphasis on the center area.

**Spot light-measuring:**
You can compose the picture and capture the image after first measuring the light only at the center spot of the LCD monitor.

1. Display the Shooting Setting Screen (page 47).

2. Select the light-measuring mode (EXP MEASURE) menu.
   - The light-measuring mode menu appears.
   - : Multi-section light-measuring
   - : Center light-measuring
   - : Spot light-measuring

3. Select the desired icon, and press the SET button.
   - This completes the light-measuring mode setting.
   - When spot light-measuring is selected, the light-measuring spot mark  appears in the center of the LCD monitor.
ISO SENSITIVITY

With the initial settings, the ISO sensitivity is automatically set according to the brightness of the subject. However, the ISO sensitivity can be set to a fixed setting.

1 Display PAGE 2 of the Shooting Setting Screen (page 47).

2 Select the ISO sensitivity menu.
   • The ISO sensitivity menu appears.

   - ISO-A: Sets the ISO sensitivity automatically (equivalent to ISO50 to 200 [video clip recording mode: ISO100 to 400]).
   - 50: Sets the sensitivity to ISO50 equivalent (video clip recording mode: ISO100).
   - 100: Sets the sensitivity to ISO100 equivalent (video clip recording mode: ISO200).
   - 200: Sets the sensitivity to ISO200 equivalent (video clip recording mode: ISO400).
   - 400: Sets the sensitivity to ISO400 equivalent (video clip recording mode: ISO800).

3 Select the desired icon, and press the SET button.
   • This ISO sensitivity is set.

HINT
   • By setting a higher ISO sensitivity, you can set higher shutter speeds and capture images in darker locations, but noise in the captured images may increase.
WHITE BALANCE

This camera automatically adjusts the white balance under most lighting conditions. However, if you want to specify the lighting conditions or change the overall tone of the image, the white balance can be manually set.

1 Display PAGE 2 of the Shooting Setting Screen (page 47).

2 Select the white balance menu.
   • The white balance menu appears.

   ![White Balance Menu]

   **AWB**: The camera will make the white balance adjustment automatically based on the natural and artificial light conditions. This is the setting used in the auto mode.
   ![Sun Icon]
   ![Cloud Icon]
   ![Fluorescent Icon]
   ![Incandescent Icon]
   ![Manual Icon]

   ![Manual Icon]: For more accurate adjustment or when the light source cannot be specified (one-push).

   **Setting procedure**
   ① Select the ![Icon] and press the SET button.
      • The ![Icon] icon moves to the left end of the line.
   ② Fill the entire screen with a plain white card (or piece of paper, etc.), and press the SET button.
3 Select the desired icon, and press the SET button.
- This completes the white balance setting.
- Once the white balance setting is programmed for the icon, it is retained even if another white balance setting (AWB, ☀, ☁, ☀, or ☑) is selected. If you changed to another setting, whenever you select the icon and press the SET button, the previously programmed setting is recalled.

**HINT**

To cancel the white balance setting
- Perform step 1, select AWB, and then press the SET button.
FLICKER-REDUCTION SETTING

The flicker-reduction setting reduces the flicker phenomenon that results when filming video clips under fluorescent lights and the like where the background lighting pulsates at the frequency of the power supply. The flicker-reduction setting is set for a frequency of 50 Hz.

1 Set the camera to the video clip recording mode, and display PAGE 2 of the Shooting Setting Screen (page 47).

2 Select the flicker-reduction menu.
   - The flicker-reduction menu appears.
     - FR: Turns off the flicker-reduction setting.
     - FR: Turns on the flicker-reduction setting.

3 Select the desired icon, and press the SET button.
   - The flicker-reduction is set.

HINT
- Note that although the flicker-reduction setting decreases the image flicker that occurs under fluorescent lighting, the image quality may deteriorate slightly.
- If the flicker-reduction setting is used outdoors on a very bright day, a halation effect may occur.
- If the flicker-reduction is set to FR, then the ISO sensitivity setting becomes fixed at ISO .
DISPLAYING THE PLAYBACK SETTING SCREENS

The Playback Setting Screens are used to adjust your camera’s playback settings.

1. Press the playback button [ ].
   - The display changes to the Playback Screen.

2. Press the MENU button.
   - The Playback Setting Screen appears.

To cancel the Playback Setting Screen
When the MENU button is pressed, you are returned to the Playback Screen.
DISPLAYING THE PLAYBACK SETTING SCREENS

Switching the page

The Playback Setting Screen consists of two pages: **PAGE 1** and **PAGE 2**.

1. Display a Playback Setting Screen.

2. Press the [◄] button.
   - The Playback Setting Screen changes to the other PAGE.
   - Each time the [◄] button is pressed, the PAGE changes.
Overview of the Playback Setting Screens

PAGE 1

1 Protect (page 78)
   - Protect data from accidental erasure (write protect).

2 Erase (page 80)
   - Delete images from the card memory.

3 Zoom jump playback (page 82)
   - Magnify the image for a better view of the details.

4 Resize (page 83)
   - Reduce the resolution of a still image.

5 Rotate image (page 84)

IMAGE PROTECT

Prevent accidental erasure of data.

1 Display the data that you want to protect from accidental erasure, and display PAGE 1 of the Playback Setting Screen (page 74).

2 Select the protect icon A, and press the SET button.
   • “LOCK?” appears.
   • If the protect mode has already been enabled for the data, then “UNLOCK?” appears.

3 Press the [▲] or [▼] button to select “YES”, and press the SET button.
   • The protect mode is set for the data.
   • The protect mark B indicates that the data is locked.
   • To return to the Playback Setting Screen, press the MENU button.
CAUTION
• Even if the protect mode is set for certain data files, they will be erased if the card is reformatted (page 113).

HINT
To select a different image in steps 2 and 3...
• Press the [%] or [▲] button.
To cancel the protect mode for an image...
• Display the desired data and repeat steps 1 to 3. The protect mark will disappear and the protect mode is canceled.
ERASING DATA

You can erase data that is stored on the card if you no longer need it. You can erase the data one at a time, or all at once.

1 To erase data from the card, perform the erase procedure with the card installed in the camera. To erase data from the camera’s internal memory, remove the card before performing the erase procedure.

2 Display PAGE 1 of the Playback Setting Screen (page 74).

3 Select the erase icon \[ \text{ ERASE } \], and press the SET button.
   • The Erase Mode Screen appears.
     ONE ERASE: Erases one data at a time.
     ERASE ALL: Erases all the data.
     EXIT: Returns to the Playback Setting Screen.

4 Press the [▲] or [▼] button to select the erase mode, and press the SET button.
   • The Erase Confirmation Screen appears.
     <ONE ERASE>
     • Press the [◄] or [►] button to select the data you wish to erase.
     <ERASE ALL>
     • Press the [◄] or [►] button to make sure that it is all right to erase all the data.
ERASING DATA

5  Select “YES” and press the SET button.
   <ONE ERASE>
   • The currently displayed image is deleted.
   • To erase other data, select the data, and press the SET button.
   <ERASE ALL>
   • The Erase Confirmation Screen again appears. To erase the data,
     select “YES”, and press the SET button. When data erase is
     completed, “NO IMAGE” is shown.

CAUTION
About protected images
• Data which is protected from accidental erase cannot be erased. To erase
  protected data, set the protect setting for the data to off (page 78), and
  then follow the data erase procedure.

HINT
• You can also access the One Erase Confirmation Screen from the
  Playback Screen by pressing the [▲] button.
ZOOM JUMP PLAYBACK

You can magnify a portion of a still image to check the accuracy of the focus.

1  Display a still image to view using zoom jump playback.

2  Press the SET button.
   • The image is magnified.
   • If the magnified view appears to be in focus, then the overall image will be in focus.

3  Press the arrow buttons to move to the part you wish to magnify, and press [T] ([]) on the zoom switch.
   • The displayed area is further magnified.
   To magnify further: Magnification increases with each press of [T] ([]) on the zoom switch.
   To go back: Magnification decreases with each press of [W] ([]) on the zoom switch.
   • Press the SET button again to return to the normal size (100%) screen.

HINT
• Zoom jump playback can also be accessed from the Playback Setting Screen.
CHANGING IMAGE SIZE (RESIZE)

The size of a still image that has already been captured at a resolution of 2M or more can be changed to 1,600 × 1,200 pixels or 640 × 480 pixels. The resized image is saved as a separate image.

1. Display the still image whose size you want to change.

2. Display PAGE 1 of the Playback Setting Screen (page 74).

3. Select the resize icon  and press the SET button.
   - The Resize Screen appears.

4. Select the new image size.
   - 2M (1600 × 1200): The saved image will be 1,600 × 1,200 pixels.
   - 0.3M (640 × 480): The saved image will be 640 × 480 pixels.
   - EXIT: Return to the Playback Setting Screen.

5. Press the SET button.
   - Resizing begins.

HINT
Why can’t the image be resized?
- An image can be resized only to a smaller (or the same) size, not to a larger size.
ROTATE IMAGE

Captured still images can be rotated to the correct orientation for viewing.

1 Display the image you wish to rotate, and display PAGE 1 of the Playback Setting Screen (page 74).

2 Select the rotate icon [ROTATE], and press the SET button.
   - The Rotate Image Screen appears.
     RIGHT: Rotates image clockwise 90 degrees.
     LEFT: Rotates image counterclockwise 90 degrees.
     EXIT: Return to the Playback Setting Screen.

3 Select “RIGHT” or “LEFT”, and press the SET button.
   - Each time the SET button is pressed, the image is rotated another 90 degrees.

HINT
- On the 9-image display playback, rotated images are shown in their original orientation.
EXTRACTING A STILL IMAGE FROM A VIDEO CLIP

You can select one image (scene) from a video clip, copy it, and save it as a still image (the original data remains unchanged).

1 Play back a video clip, and pause at the point you wish to copy and save.

2 Display PAGE 1 of the Playback Setting Screen (page 74).

3 Select the extract still icon 🔄, and press the SET button.
   - The screen to extract an image appears.

   YES: The image is copied and saved as a still image (the original data is left unchanged).

   EXIT: You are returned to the Playback Setting Screen.

4 Select “YES” and press the SET button.
   - The image is extracted.

HINT
To select a different image (frame) in step 3...
- Press the [◄] or [►] button.
COPY DATA

Images recorded in the camera’s internal memory can be copied to the card, and likewise from the card to the internal memory.

1 Insert the card in the camera (page 14).

2 Display PAGE 2 of the Playback Setting Screen (page 74).

3 Select the copy image icon thumbnail, and press the SET button.
   - The Copy Image Screen appears.

4 Press the [▲] or [▼] button to select the copy direction.

   INT MEM ► CARD:
   Copy image data from the internal memory to the card.

   CARD ► INT MEM:
   Copy image data from the card to the internal memory.

* If no card is set in the camera, you cannot copy data.
COPY DATA

5 Press the SET button.
   • The screen to select the type of copy appears.
   • The copy source is shown in the background on the screen.

COPY SINGLE:
Copy the data for one image.

COPY ALL:
Copy all the data from the copy source to the copy destination.

6 Select the desired type of copy.
   <When selecting COPY SINGLE>
   ① Press the [ ] or [ ] button to display the image you wish to copy.
   ② Press the [ ] or [ ] button to select “COPY SINGLE”.
   <When selecting COPY ALL>
   ① Press the [ ] or [ ] button to select “COPY ALL”.

7 Press the SET button.
   • The Copy Confirmation Screen appears.
   • To continue the copy procedure, select “YES” and press the SET button.
   • To discontinue the copy procedure and return to the screen in step 5, select “EXIT” and press the SET button, or press the MENU button.
PRINT SETTINGS

In addition to using your printer to print out still images captured with your camera, as with conventional film, you can have prints made at shops offering digital print services. Moreover, this camera is DPOF-compatible, so you can use the camera to specify the number of prints, whether or not the date is displayed on the print, and also to specify an index print.

Display the Print Settings Screen

1. Display PAGE 2 of the Playback Setting Screen (page 74).

2. Select the print settings icon and press the SET button.
   - The Print Setting Screen appears.
     ALL IMAGES:
     The specified print settings apply to all the still images on the card.
     EACH IMAGE:
     The print settings are specified for each individual image.
     INDEX:
     All the still images are printed as miniature images (thumbnail images), several images on one print.
     ALL CLEAR:
     Clear all the print settings. This cannot be selected if no print settings have been made for the image.
     EXIT:
     Return to the Still Image Playback Setting Screen.
PRINT SETTINGS

HINT

Printing a single frame from a video clip
- To print with a printer or have the digital print service shop print out a still image from a video clip, you must first save it (save frame [page 85]) as a still image.

About the DPOF format
- DPOF (Digital Print Order Format) is a print order format. You can connect your camera to a DPOF-compatible printer to produce your prints. You can also set the print settings (page 125) for the desired images, and then have the reserved images printed automatically.

About the finished prints
- Images that have been rotated will be printed in their original orientation.
- The quality of the print output will differ depending on the print service and printer used.
Specifying date imprinting and number of prints

You can specify print settings for each individual image (EACH IMAGE), or apply the print settings to all the images on the card (ALL IMAGES).

1 Display the Print Setting Screen (page 88).

2 Select ALL IMAGES or EACH IMAGE.
   ALL IMAGES:
   The set print settings are applied to all the still images on the card.
   EACH IMAGE:
   The set print settings are applied only to the image currently displayed.

3 Press the SET button.
   • The Date/Copies Print Screen appears.
   • If “EACH IMAGE” was selected, press the [◄] or [►] button to display the desired image to print.
   • Under “SETTINGS” the settings that are currently active for the displayed image are shown. You can press the [◄] or [►] button to confirm the print settings for each image.
PRINT SETTINGS

4 Specify whether the date is displayed on the print, and the number of prints.

<Specifying dated prints>
① Press the [▲] or [▼] button to select “DATE”.
② Press the SET button.
   • The Print Date Screen appears.
③ Press the [▲] or [▼] button to select the desired option.
   YES: Print the date.
   NO: Do not print the date.
④ Press the SET button.
   • You are returned to the Date/Copies Print Screen.

<Specifying the number of prints>
① Press the [▲] or [▼] button to select “COPIES”.
② Press the SET button.
   • The Print Number Screen appears.
③ Press the [▲] or [▼] button to specify the number of prints.
   • Press the [▲] or [▼] button until the desired number of prints is displayed.
④ Press the SET button.
   • You are returned to the Date/Copies Print Screen.
5 Select “ADD TO PRINT SETTING” and press the SET button.
   • The Confirm Print Settings Screen appears.

   If the print settings are correct:
   Select “EXIT”, and press the SET button.

   If the print settings were changed:
   Select “MODIFY PRINT SETTING”, and press the SET button.

Index print
Printing out many small images on one sheet is called an “index print”. This is convenient for use as a list of the images you have captured.

1 Display the Print Setting Screen (page 88).

2 Select “INDEX”. 
PRINT SETTINGS

3 Press the SET button.
   • The Index Print Screen appears.
     YES:
     Specify an index print copy.
     EXIT:
     Discontinue the setting procedure, and return to the Print Setting Screen.

4 Select “YES”, and press the SET button.
   • This completes the setting for the index print. You are returned to the Print Setting Screen.

Changing the print settings

1 Follow steps 1 to 4 on pages 90 and 91.

2 Select “MODIFY PRINT SETTING”, and press the SET button.
Clearing all the print settings

Delete the print settings for all images.

1 Display the Print Setting Screen (page 88).

2 Select “ALL CLEAR”.

3 Press the SET button.
   • The Confirm All Clear Screen appears.
   YES: Clear the print settings for all images.
   EXIT: Cancel the clear procedure and return to the Print Setting Screen.

4 Select “YES”, and press the SET button.
   • All the print settings are cleared and you are returned to the Print Setting Screen.
SLIDESHOW PLAYBACK

1 Display PAGE 2 of the Playback Setting Screen (page 74).

2 Select the slideshow icon 🎯, and press the SET button.
   • The Slideshow Screen appears.

   TIME: Adjust the transition speed (the period that an image is displayed before it changes to the next image).

   EFFECT: Select a transition effect as an image changes to the next image.

   START: Begin slideshow playback.

   EXIT: Return to the Playback Setting Screen.

<Changing the transition speed or transition effect>

① Select “TIME” or “EFFECT”, press the SET button.
② Press the [▲] or [▼] button to change the setting.
③ Press the SET button.
Select “START”, and press the SET button.
• Slideshow playback starts.
• To stop slideshow playback, press the SET button or MENU button.
DISPLAYING IMAGE PROPERTIES (INFORMATION SCREEN)

On the Information Screen you can check what the settings were when an image was captured.

1. Display the desired image (pages 29 and 33).

2. Press and hold the MENU button for at least 2 seconds.
   - The Information Screen appears.
   - If the MENU button is pressed again, the Information Screen is canceled.

OPERATION SOUNDS

This setting allows you to set whether or not a confirming audio signal sounds when the operation buttons (shutter button, SET button, MENU button, etc.) are pressed.

1. Display the Option Screen (page 98).

2. Select the operation beep icon [ ], and press the SET button.
   - The Operation Beep Setting Screen appears.
   - The current settings are shown on the screen.
   - If “ALL OFF” is selected and the SET button pressed, all the operation sounds are muted.
   - If “EXIT” is selected and the SET button pressed, you are returned to the Option Screen.

SHUTTER:
Select the sound that is produced when the still image shooting button is pressed, or when a photo is taken using the self-timer.

KEY SW:
Select the sound that is produced when a camera button (SET button, MENU button, etc.) is pressed.
3 Select “CHANGE SETTINGS”, and press the SET button.
   • The screen to select the operation buttons appears.
   SHUTTER:
   Set the sound for the shutter button.
   KEY SW:
   Set the sounds of the operation buttons (except for the ON/OFF button and shutter button).
   EXIT:
   Return to the Operation Sounds Screen.

4 Select the desired operation button, and press the SET button.
   • The screen to change the setting appears.

5 Press the [▲] or [▼] button to change the setting.
   ON: Activates the sound.
   OFF: Deactivates the sound.

6 Press the SET button.

7 Select “EXIT”, and press the SET button.
   • The operation sound settings are completed.
HELP DISPLAY

You can set whether or not the help messages are shown on the LCD monitor.

1  Display the Option Screen (page 98).

2  Select the help display icon and press the SET button.
   • The Help Setting Screen appears.
     ON: The HELP messages are enabled.
     OFF: The HELP messages are disabled.

3  Select the desired setting, and press the SET button.
   • This completes the help display setting.
POST-VIEW SETTING

Specify the duration that the captured image appears on the LCD monitor (post-view) after the shutter button is pressed.

1  Display the Option Screen (page 98).

2  Select the post-view icon [PV], and press the SET button.
   • The Post-view Screen appears.
     1 SEC:
     The post-view image is displayed for 1 second.
     2 SEC:
     The post-view image is displayed for 2 seconds.
     OFF:
     The post-view image is not displayed.

3  Select the desired setting, and press the SET button.
   • This completes the post-view setting.
DIGITAL ZOOM SETTING

Set the digital zoom setting to ON or OFF. If the deterioration of image quality characteristic of the digital zoom function is not to your liking, you may choose to disable the digital zoom (OFF) and shoot using only the optical zoom.

1 Display the Option Screen (page 98).

2 Select the digital zoom icon \( \text{DIGITAL ZOOM} \) and press the SET button.
   - The Digital Zoom Screen appears.
   - ON: Digital zoom is enabled.
   - OFF: Digital zoom is disabled.

3 Select the desired function, and press the SET button.
   - This completes the digital zoom setting.

HINT

Why doesn’t the digital zoom work even though it is set to ON?
- The digital zoom does not function in the following situation:
  When the resolution is set to 10M.
LCD MONITOR BRIGHTNESS

Adjust the brightness of the camera’s LCD monitor display. Use this adjustment when the monitor image is difficult to view because of ambient lighting.
In addition, in very bright surroundings, such as outdoors on a sunny day, you can turn the backlight OFF to preserve battery power.

1 Display the Option Screen (page 98).

2 Select the LCD brightness icon  and press the SET button.
   • The brightness control display appears.

3 Press the [◄] or [►] button to set the brightness, and press the SET button.
   • The LCD monitor brightness is set.

HINT
• The display in step 2 can also be accessed from the Shooting Screen. Press and hold the MENU button for at least 1 second; the brightness control display will appear, and you can then adjust the monitor brightness.
SCREEN LANGUAGE

You can set the LCD monitor of your camera to display the messages in any one of several languages.

1. Display the Option Screen (page 98).

2. Select the language icon and press the SET button.
   - The Language Screen appears.
     DEUTSCH: German
     ENGLISH: English
     ESPAÑOL: Spanish
     FRANCAIS: French
     ITALIANO: Italian
     NEDERLANDS: Dutch
     ПУССКИЙ: Russian
     日本語: Japanese
     한국어: Korean
     中文（繁）: Chinese (traditional)
     中文（简）: Chinese (simplified)

3. Select the desired language, and press the SET button.
   - The selected display language is set.
POWER SAVE FUNCTION

Your camera has a “power save” function whereby the power automatically turns off after a specified period of inactivity. The power save function works to conserve the battery power when the camera is not being used, or to prevent the batteries from dying if the camera has accidentally been left on. You can specify the elapsed time (standby time) before the power save function is activated.

1. Display the Option Screen (page 98).

2. Select the power save icon [PS], and press the SET button.
   - The Power Save Setting Screen appears.
   - **BATT/CAM:**
     Set the standby time for the shooting modes when the battery is used.
   - **BATT/PB:**
     Set the standby time for the playback modes when the battery is used.
   - **EXT.PWR/CAM.PB:**
     Set the standby time for the shooting and playback modes when using an AC power source.
   - **EXIT:**
     Return to the Option Screen.

[PS POWER SAVE]

- BATT/CAM ➤ 1 min
- BATT/PB ➤ 5 min
- EXT.PWR/CAM.PB ➤ 10 min
- EXIT
POWER SAVE FUNCTION

3 Select the desired option, and press the SET button.
   • The Set Standby Time Screen appears.

4 Press the [▲] or [▼] button to set the standby time.

5 Press the SET button.
   • The power save function is set.

<Example: When “BATT/CAM” is selected>
FILE No. RESET FUNCTION

If a newly formatted (page 113) card is used, the file name (image number) of the captured image automatically begins from 0001. If the card is subsequently reformatted, or if a different reformatted card is used, the file names again begin from 0001. This is because the file number reset function is set to “ON”, and consequently it results in more than one card containing images with the same numbers. By setting the file number reset function to “OFF”, even if the card is reformatted or the card is replaced with another card, the consecutive numbering of file names continues from the last number recorded by the camera.

<File number reset function “ON”>

<table>
<thead>
<tr>
<th></th>
<th>File name (image number)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Card A</td>
<td>0001, 0002...... 0012, 0013</td>
</tr>
<tr>
<td></td>
<td>Replace card</td>
</tr>
<tr>
<td>Card B</td>
<td>0001, 0002...... 0012, 0013</td>
</tr>
</tbody>
</table>

<File number reset function “OFF”>

<table>
<thead>
<tr>
<th></th>
<th>File name (image number)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Card A</td>
<td>0001, 0002...... 0012, 0013</td>
</tr>
<tr>
<td></td>
<td>Replace card</td>
</tr>
<tr>
<td>Card B</td>
<td>0014, 0015.......0025, 0026</td>
</tr>
</tbody>
</table>
FILE No. RESET FUNCTION

- If Card B already has image data in it when it replaces Card A, file names are assigned as follows.

_When the highest image number on Card B (before replacing) is lower than the highest image number on Card A:_ the file name of the next recorded image continues from last file name recorded on Card A.

<table>
<thead>
<tr>
<th>Card A</th>
<th>0001, 0002 ..... 0012, 0013</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Replace card</td>
</tr>
<tr>
<td>Card B</td>
<td>0001, 0002, 0014, 0015 ......0025, 0026</td>
</tr>
</tbody>
</table>

Previously recorded images

_When the highest image number on Card B (before replacing) is higher than the highest image number on Card A:_ the file name of the next recorded image continues from last file name recorded on Card B.

<table>
<thead>
<tr>
<th>Card A</th>
<th>0001, 0002 ..... 0012, 0013</th>
</tr>
</thead>
<tbody>
<tr>

<td>Replace card</td>
</tr>
<tr>
<td>Card B</td>
<td>0020, 0021, 0022, 0023 ......0025, 0026</td>
</tr>
</tbody>
</table>

Previously recorded images

**HINT**

What about the internal memory?

- The file number reset function works the same for the internal memory.
1 Display the Option Screen (page 98).

2 Select the file number reset icon.

3 Press the SET button.
   • The File Number Reset Screen appears.
     ON:
     The file number reset function is “ON”.
     OFF:
     The file number reset function is “OFF”.

4 Select “OFF”, and press the SET button.
   • The file number reset function was set to OFF.

HINT
• Until the file number reset function is turned “ON”, consecutive file names are assigned. It is recommended that the file number reset function be returned to “ON” at the end of each photography session.
INITIALIZING THE CARD MEMORY AND INTERNAL MEMORY

The supplied card must be formatted with this camera. In addition, a card must be formatted with this camera:
- After purchasing, when used for the first time, or
- If it was formatted using a personal computer or another digital camera.

The card cannot be reformatted if the lock switch is set to the “LOCK” position. Proceed with the reformat procedure after setting the lock switch to the unlocked position.

1 To reformat a card, install it in the camera. To reformat the camera’s internal memory, remove the card from the camera.

2 Display the Option Screen (page 98).

3 Select the format icon [ ], and press the SET button.
   - The screen to select the type of format appears.
   - In normal use, a full format is not necessary. However, in case a card error occurs even after normal formatting, executing a full format may resolve the problem.

   **FORMAT:**
   A normal formatting is executed.

   **FULL FORMAT:**
   The entire card is scanned and reformatted. It is not possible to select this when there is no card installed, or when the remaining battery charge is low.
4 Select the desired format option, and press the SET button.
   • The Confirm Format Screen appears.

5 Select “YES”.

6 Press the SET button.
   • Formatting begins.
   • During formatting, “FORMATTING” and “DO NOT POWER OFF” are shown on the LCD monitor.

CAUTION
Caution during reformatting
   • Please do not turn off the camera or insert/remove the card while the card is being formatted.

Reformatting erases the data
   • When the card or internal memory is initialized, all the recorded data is erased. Protected data is also erased, so before reformatting a card, any data you want to keep should be copied to your personal computer’s hard disk or other storage medium.

Can data be restored after a card is formatted?
   • It may be possible to restore data from a reformatted card by using application software designed to restore data. However, even such application software cannot restore data after a full format has been executed. It is recommended that a full format be executed before you dispose of a card or transfer it to someone else.

HINT
To cancel reformatting
   • In step 5, select “NO”, and press the SET button.
RESETTING THE CAMERA SETTINGS

Reset the camera to the factory-preset settings.

1. Display the Option Screen (page 98).

2. Select the reset settings icon and press the SET button.
   - The Reset Settings Screen appears.
     YES: Reset to the factory-preset settings.
     NO: Do not change the settings, and return to the Option Screen.

3. Select “YES”, and press the SET button.
   - The camera settings are reset to the factory-preset settings.

HINT
- Note that the following settings do not change with this procedure:
  Date and time setting
  Language setting
CHECKING THE REMAINING INTERNAL MEMORY AND CARD MEMORY

You can check how many images can be captured on the card. For a table showing the maximum number of images and recording time for the internal memory and for a specific card, please see “Possible No. of Images/Possible Shooting Time” on page 146.

1. Press the ON/OFF button to turn the camera on, and press the MENU button.
   • The Mode Select Screen appears.
   <To check the remaining number of still images>
   Select PHOTO, and press the MENU button.
   <To check the remaining video clip recording time>
   Select MOVIE, and press the MENU button.
   • The remaining number of still images or video clip recording time is shown on the LCD monitor.
   • The remaining number of images and video recording time will differ depending on the resolution setting.

HINT
• When the remaining number of images or the remaining video recording time is “0”, you cannot capture any more images. To capture more images, either install a new card, or save the images to a computer and then erase them (page 80) from the card.
• When the remaining number of images or the remaining video recording time is “0”, it may be possible to capture a few more images by setting a lower resolution setting (page 58).
CHECKING THE REMAINING BATTERY CHARGE

When using batteries, the remaining battery charge can be checked on the LCD monitor. Make sure to check this indicator before capturing an image. For an indication of the possible length of time for battery operation, see page 145.

1 Display a Shooting or Playback Setting Screen (pages 47 and 74).
   • The battery remaining charge indicator appears in the lower right corner of the LCD monitor.
   • Due to the battery characteristics, when the ambient temperature is low, \( \square \) may appear early for an incorrect indication of the remaining charge.
   Also, depending on the conditions of use of the camera or the ambient conditions (temperature, etc.), the indicated remaining charge may change. Therefore, this indication can only be used as a general approximation of the remaining charge.

<table>
<thead>
<tr>
<th>Battery remaining charge indicator</th>
<th>Battery remaining charge</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Approx. full.</td>
</tr>
<tr>
<td></td>
<td>Power is low.</td>
</tr>
<tr>
<td></td>
<td>It will soon be impossible to capture or playback images.</td>
</tr>
<tr>
<td></td>
<td>If this icon flashes when the shutter button is pressed, images cannot be captured. Replace the batteries.</td>
</tr>
</tbody>
</table>
HINT
• If any data is present, you can also check the remaining battery charge on the Playback Setting Screen or Information Screen.
• Battery life may differ even among batteries of the same type.
• Depending on the usage of the camera (such as the number of times the flash is used, etc.) or the ambient temperature (temperatures below 10°C [50°F]) the number of images that can be saved on fully charged batteries will vary greatly.
• It is recommended that you prepare extra batteries when taking pictures at a wedding or while traveling, for example, so you don't miss capturing images of important moments due to the battery power running out. The same is recommended for taking photos in cold environments. (In a ski area, for example, the batteries can be kept warm in your pocket until ready to use.)
DIRECT PRINTING

Your camera supports the PictBridge function. By connecting the camera directly to a PictBridge-enabled printer, the camera’s LCD monitor can be used to select images and initiate printing (PictBridge printing).

Print preparations

1. Insert the card containing the images you wish to print in the camera.

2. Turn the printer on, and use the supplied USB interface cable to connect the camera to the printer.
   - Connect the camera’s USB terminal to the printer’s USB connector.
   - The USB Connection Screen appears on the camera’s LCD monitor.

USB Connection

CARD READER  PictBridge  CANCEL

Supplied dedicated USB interface cable

USB terminal  To USB connector on the printer
3 Select “PictBridge”, and press the SET button.
- The Print Settings Screen appears.

**CAUTION**

**Caution when connecting a printer**
- If the power to the printer is turned off while it is connected, the camera may not operate correctly. If the camera does not operate correctly, disconnect the USB interface cable, turn off the camera, and then reconnect the cable.
- During PictBridge printing, the camera’s button operation response is slower.
- If the camera is powered by batteries for printing, make sure that the remaining battery charge is sufficient.

**Insert and pull out the cable carefully**
- When connecting the cables, make sure that the cable plugs are correctly oriented and that they match the shapes of the terminal sockets on the devices. Push the plugs in straight when connecting them. If undue force is used to connect a cable, it may permanently damage the connector pins in the terminal socket.
- Do not use excessive force when connecting and disconnecting cables.
DIRECT PRINTING

To select one image and print it (one image)

Procedure to select one still image and print it.

1 Complete the printing setup (page 119).

2 Select the one image icon, and press the SET button.
   • The screen to select images for printing appears.

3 Press the [◄] or [►] button.
   • Specify the image to print.
4 Specify the number of prints.
   ① Select “COPIES”, and press the SET button.
   ② Press the [▲] or [▼] button to specify the number of prints.
   ③ Press the SET button.
      • “PRINT” is selected.

5 Press the SET button.
   • Printing begins.

HINT
To cancel printing
   ① During printing, press the [▼] button.
      • The Confirm Cancel Printing Screen appears.
   ② Select “YES”, and press the SET button.
      • If “EXIT” is selected and the SET button is pressed, printing resumes.
DIRECT PRINTING

To print all the images (all images)
Print all of the images.

1 Complete the printing setup (page 119).

2 Select the all images icon [ALL], and press the SET button.
   • The Print All Images Screen appears.

3 Select “PRINT”, and press the SET button.
   • Printing begins.

CAUTION
Printing is not possible if there are more than 999 still images in the card.
• Delete unwanted images before printing.
Thumbnail prints (index)
Make an index print of all the images.

1. Complete the printing setup (page 119).

2. Select the index print icon INDEX, and press the SET button.
   - The Index Print Screen appears.

3. Select “PRINT”, and press the SET button.
   - Printing begins.
DIRECT PRINTING

To print the images that are set to print (print reserved images)

Procedure to print all the images that are set to print.

1. Make the print settings (page 88), and complete the printing setup (page 119).

2. Select the DPOF icon \[\text{DPOF}\] , and press the SET button.
   - The Print Scheduled Images Screen appears.

3. Select “PRINT”, and press the SET button.
   - Printing begins.
   - Printing begins about 1 minute after the SET button is pressed.

HINT
- In step 2, if you press the [\[\] or [\[\]] button, you can confirm the images that are set to print and their DPOF settings.

CAUTION
- Reserved images printing [\[\text{DPOF}\] is not possible if a printer is used that does not support your camera’s DPOF function.
To change the printer settings and print images (change printer settings)

Images are printed according to settings specified by the camera, such as paper type, size, layout, printing quality, etc.

1 Complete the printing setup (page 119).

2 Select the printer settings icon and press the SET button.
   - The Printer Settings Screen appears.
     MEDIA TYPE:
     Specify the type of paper used for printing.
     PAPER SIZE:
     Specify the size of paper used for printing.
     LAYOUT:
     Specify how the images are to be arranged on the paper.
     QUALITY:
     Select the print quality for the images.
     DATE STAMP:
     Print the date the photo was taken.
     EXIT:
     Return to the PictBridge Screen.
DIRECT PRINTING

3 Adjust the printer settings.
   ① Press the [▲] or [▼] button to select a printer setting parameter, and press the SET button.
      • The screen to set the selected parameter appears.
   ② Press the [▲] or [▼] button to adjust the setting, and press the SET button.
      • The selected parameter is set, and you are returned to the Printer Settings Screen.
      • Follow the same procedure to adjust the other parameters, as desired.
      • The contents of the settings that can be made for each parameter will differ depending on the printer.
   <When “PRINTER VALUE” is selected>
      • The images will be printed according to the settings specified on the printer side.

4 Select “EXIT”, and press the SET button.
   • You are returned to the Printing Mode Screen.

HINT
   • The printer setting parameters will differ depending on the printer that is connected.
   • To use printer functions which do not appear on your camera’s Printer Settings Screen, select “PRINTER VALUE”.
   • If a function set by the camera is not available in the printer, the camera’s printer settings will automatically change to “PRINTER VALUE”.

- Sanyo Electric declines all responsibility for damages due to improper use of the camera, failure to adhere to the instructions given in this manual, or repairs or changes done by those other than a technician authorized by the manufacturer.
- Sanyo Electric shall not be held responsible for any damage caused by optional devices or consumable items used with the camera other than those supplied with the camera or those specified by Sanyo Electric.
- Sanyo Electric shall not be held responsible for any losses or loss of revenue resulting from the loss of data caused by the malfunction, or the repairing of a malfunction, of the camera.
- The images captured with this camera will differ in quality from pictures taken with a standard film camera.
HINTS FOR TAKING PICTURES

Taking great pictures in difficult surroundings is easier than you might think. By keeping a few points in mind and choosing the correct settings, you can create photos that you’ll be proud to display and share.

If images are blurred even when the autofocus is used

Your camera employs an autofocus function. When you snap a picture using the autofocus, the camera automatically adjusts the settings so that the image will be in focus. If you are getting blurred images even when using the autofocus, one or more of the following might be the reason.

■ How the autofocus works

The autofocus is activated when the shutter button is lightly touched. Press the shutter button slightly, and the target mark will appear on the LCD monitor to indicate that the autofocus has been activated. Next, continue to gently press the shutter button all the way to snap the picture. This two-step method is the way to ensure that your photos are perfectly focused.

■ Reasons for unfocused images

1. The shutter button was pressed before the image was focused.
2. After the image was focused, the subject moved.
   - Even if camera focuses the subject once, if the distance between the camera and the subject is changed, the subject may become out of focus.
3. The focus setting is not set for the correct distance.
   - If you shoot a close-up subject with the camera set to the normal focus mode, or if you shoot a subject at normal distance with the camera set to the macro (close-up) mode, the image will not be in focus.

■ Preventing blurred images

1. Confirm that the camera is set to the correct focus mode for your subject.
2. Hold the camera correctly, and lightly touch the shutter button.
3. Wait for the target mark to appear in the LCD monitor, and holding the camera steady, gently continue to press the shutter button all the way down.

Following these steps for a gentle but firm pressing of the shutter button will ensure that you get beautifully focused photos.

■ When the correct exposure setting is in doubt

When taking pictures with the light coming from behind the subject or through a window, it is usually necessary to adjust the exposure setting before shooting. Not only may it be difficult to determine the ideal exposure setting, but in addition, having to correct the exposure for each and every shot can be a bother. This is where the “auto bracket shots” function can prove to be a great convenience.

When the auto bracket shots mode is selected, one press of the shutter button captures a series of 7 successive images (or 5 images if the resolution is set to [6M]+ or [6M-]) as the exposure automatically changes. Later you can view all the images in the bracket series to decide which one has the best exposure, and select one image to save.
Photographing a moving subject

Situation: You would like to snap an action shot of a moving child or pet. The autofocus is activated, but because the subject is moving, the image may be blurred. In particular, when the distance between the camera and the subject is changing, it is difficult to lock the focus on the subject. Here are some hints for successfully capturing images of moving subjects.

- **Reasons for unfocused images**
  When the shutter button is touched lightly, the camera’s autofocus works by determining the distance between the camera and the subject. Once the subject is in focus, if it then moves before the picture is snapped, the image may be out of focus. This often happens when you once lock the focus on a subject and then wait for the right moment to snap the picture. And, conversely, a blurred image may result if you press the shutter button all the way in one step in an attempt to quickly capture an action scene, thus failing to activate the autofocus in time.

- **Preventing blurred images (How to use the manual focus [page 60])**
  In addition to the autofocus, a manual focus mode is also incorporated in your camera. In the autofocus mode, the distance between the camera and the subject is automatically determined when you press the shutter button halfway. In contrast to this, with the manual focus mode, you manually set the focus by specifying the correct distance between the camera and the subject before taking the picture.

- **How to photograph a moving subject**
  ① Set the camera’s focus mode to the manual focus. Set the focus distance to the correct distance between the camera and the subject.
  ② When the subject is at the set focus distance, gently press the shutter button all the way down.

  **<Advantage of using the manual focus>**
  - Images can be quickly captured without waiting for the autofocus to activate.
  - Because you are presetting the focus distance, the focus can be more accurate.

  **<Using the manual focus effectively>**
  - When photographing a moving subject, press the shutter button just before the subject reaches the focus distance, and the shutter will be released when the subject is at the correct distance.
  - Use manual focus to avoid incorrectly focused images when there is an object between the camera and the subject you wish to focus on.
HINTS FOR TAKING PICTURES

Shooting portraits (portrait mode 🖼️)

Points:
- Choose a background that doesn’t detract from your subject.
- Move in close to your subject.
- Pay attention to lighting and how it affects your subject.

NOTE
- If the background is distracting, it will not show your subject to his best advantage. Move in closer to your subject or zoom in so that the background does not compete with the subject.
- In portrait photography your subject is clearly the central figure, so try techniques that allow the subject to stand out.
- If light is coming from behind your subject (backlit), his face will appear dark. You can get a better picture by using the flash, for example, or changing the exposure setting.

Photographing moving subjects (sports mode 🏃‍♂️)

Points:
- Match the camera’s movement with that of the subject.
- Set the zoom to the Wide end (wide-angle).
- Don’t be too hesitant to press the shutter button, or you’ll miss the action.

NOTE
- Tips to not missing those great action shots: Make sure you’re holding the camera correctly. Keep the subject in the lens at all times, moving the camera with him while waiting for the right shot. Move your whole body—not just your arms—with the camera while shooting.
- Blurred images are more likely when the zoom is set to the Tele end than the Wide end. Set the zoom as close as possible to the Wide end.
- Learn to press the shutter button quickly yet smoothly the instant your photo chance occurs.
Night photography (night view mode 🌃)

Points:
• Avoid camera shake.
• Increase the ISO sensitivity.

NOTE
• Camera shutter speed during night photography is considerably slower, so there is a much greater chance that your photographed images will be blurry. Use a tripod whenever possible, or if a tripod is not available, you can lean against a wall or pillar to help stabilize the camera.
• You can photograph your subject with the night scene in the background by using the flash. Be careful not to shoot too close to the subject, however, or your subject’s face will appear too bright.
• After the flash operates, keep the camera and the subjects motionless for about 2 seconds.

Photographing scenery (landscape mode 🍃)

Points:
• Shoot using a high resolution.
• For zoom photography, use the optical zoom.
• Pay attention to picture composition.

NOTE
• When shooting with a wide-angle setting, or if you intend to enlarge the photo, the higher the resolution, the better.
• To zoom in on distant scenery, it’s better to use the optical zoom. Using the digital zoom produces a coarser image. Hold the camera securely, keeping your elbows close to your body and making sure the camera is stable. Using a tripod or other means of stabilizing the camera will increase the likelihood of getting a clear photo.
• Don’t forget to pay attention to picture composition; note perspective and be aware of how the placement of objects affects the scene.
