Troubleshooting

If you have problems

Battery pack and power

- Cannot insert the battery pack into the camera
- Cannot turn on the camera
- Power turns off suddenly
- Remaining charge indicator is incorrect
- Charge lamp of the camera flashes while charging the battery
- Battery is not charged even if the Charge lamp turns off and charging is finished

Shooting still images/movies

- Cannot record images
- Image is blurred
- Image is out of focus
- Zoom does not work
- Cannot select the Face Detection function
- Flash does not work
- Fuzzy white circular spots appear in images shot using flash
- Close-up shoot function (Macro) does not work
- Date and time are not displayed on the screen
- F value and shutter speed flash when you press and hold the shutter button halfway down
- Image colors are not correct
- White or purple streaks appear in bright areas of the subject, or the whole screen of the image becomes reddish
- Noise appears in the image when you view the screen in a dark place
- Eyes of the subject come out red
- Dots appear and remain on the screen
- Cannot shoot images in succession
- Same image is shot several times

Viewing images

- Cannot play back images
- Date and time are not displayed
- Cannot display images in index mode
- Cannot hear music during slideshow

**Computers**
- Your computer does not recognize the camera
- Cannot import images
- Image and sound are interrupted by noise when you view a movie on a computer
- Images once exported to a computer cannot be viewed on the camera

**Memory card**
- You have formatted a memory card by mistake
- Images are recorded on internal memory even when a memory card is inserted into the camera

**Internal memory**
- Cannot play back or record images using internal memory
- Cannot copy stored data in internal memory to a memory card
- Cannot copy memory card data or computer data to internal memory

**Printing**
- Images are printed with both edges cut off
- Cannot print images with date

**Others**
- The lens gets fogged
- Camera turns off with the lens portion extended
- Camera becomes warm when you use it for a long time
- Clock Set screen appears when you turn on the camera
- Date or time is incorrect

Selecting the shooting mode based on the subject

**List of mode dial functions**
Sets the mode dial to the desired function.

**Intelligent Auto**
You can shoot still images with settings adjusted automatically.

**Scene Recognition**
Scene Recognition operates in Intelligent Auto mode.

**Program Auto**
You can shoot with exposure adjusted automatically (both shutter speed and aperture value).

**Shooting panoramic images**
You can create a panoramic image from composite images.

**Scene Selection**
You can shoot with preset settings according to the scene.

**Shutter Speed Priority Shooting**
By adjusting shutter speed, you can shoot a moving object with a different representation, such as freezing action, or emphasizing movement with its trace.

**Aperture Priority Shooting**
You can adjust focus range or degree of background defocus.

**Manual Exposure Shooting**
You can shoot at your favorite exposure by manually setting shutter speed and aperture value.

Notes on use
Digital Still Camera
DSC-H400

Zoom

**Zoom**
You can enlarge the image when shooting. The camera's optical zoom function can enlarge images up to 63x.

**Digital Zoom**
Selects digital zoom mode.

Selecting image size

Image size
Image size determines the size of the image file that is recorded when you take an image.

Image size when shooting Sweep Panorama
Sets the image size of Sweep Panorama. The image size varies depending on the panorama shooting direction.

Image size when shooting movies
The larger the size of the movie image, the higher the image quality. The higher the amount of data used per second (average bit-rate), the smoother the playback image.

Notes on use

Digital Still Camera  
DSC-H400  

Advanced shooting  

**Easy Mode**  
Allows you to shoot still images using the minimum necessary functions.  

**Shooting Direction in Sweep Panorama**  
Sets the direction in which the camera will be panned when shooting in Sweep Panorama mode.  

**AF Illuminator**  
The AF illuminator supplies fill light to focus more easily on a subject in dark surroundings.  

**Exposure Compensation**  
You can adjust exposure manually in 1/3 EV steps in a range of –2.0 EV to +2.0 EV.  

**Metering Mode**  
Selects the metering mode that sets which part of the subject to measure to determine exposure.  

**Cont. Shooting Settings**  
You can select Single Shooting or Continuous Shooting as the shooting mode.  

**Self-Timer**  
You can shoot with a 10-second or 2-second delay using the self-timer.  

**Bracket Setting**  
You can set the type of bracket shooting. In bracket shooting mode, you can record a series of 3 images with the setting changed. You can select the most suitable image afterwards.  

**DRO**  
Analyzes the shooting scene and automatically corrects brightness and contrast to improve image quality.  

**ISO**  
Selects luminous sensitivity when the camera is set to Program Auto. In Movie mode, [ISO] is fixed to [Auto].
White Balance
Color tones are adjusted according to surrounding light conditions. Use this function if image color appears unnatural.

Picture Effect
You can shoot a still image with original texture, according to the desired effect.

Color hue
When you select [Toy camera] in Picture Effect, adjusts color hue.

Extracted Color
When you select [Partial Color] in [Picture Effect], select the color to extract.

Face Detection
When the Face Detection function is used, the camera detects the faces of your subjects and adjusts the focus, flash, exposure, white balance and red-eye reduction settings automatically.

Red Eye Reduction
The flash strobes two or more times before shooting to reduce the red-eye phenomenon when using flash.

Write Date
Sets whether to record a shooting date on the still image.

Grid Line
With reference to grid lines, you can easily set a subject in a horizontal/vertical position.

Setup menu

Disp. Resolution
Adjusts the image quality on the screen for shooting.

Beep
Selects the sound produced when you operate the camera.

Monitor Brightness
Selects screen brightness from level 1 to 5. The screen becomes brighter as the number rises.

Language Setting
Selects the language to be used in menu items, warnings and messages.

Initialize
Initializes settings to the default setting.

Function Guide
You can select whether or not the function guide is displayed when you operate the camera.

Video Out
Sets the video signal output according to the TV color system of the connected video equipment. The TV color systems differ depending on the country and region.

USB Connect Setting
Sets how to make a USB connection when connecting the camera to a computer, etc.

USB Power Supply
Sets whether to use the USB power supply function when the camera is connected to a computer or USB device using the dedicated USB cable (supplied).

LUN Setting
Sets USB connection mode when connecting the camera to a computer, etc.
Eye-Fi
You can use the upload function by using a commercially available Eye-Fi card.

Power Save
Sets the length of time until the screen goes dark and the time until the camera turns off.

Format
Formats the memory card or the internal memory.

Create REC.Folder
Creates a folder in a memory card for recording images.

Change REC.Folder
Changes the folder in the memory card that is currently used for recording images.

Delete REC.Folder
Deletes a folder for recording images in a memory card.

Copy
Copies all images in the internal memory to a memory card.

File Number
Selects the method used to assign file numbers to images.

Area Setting
Sets the area in which you are using this camera.

Date & Time Setting
Sets date and time again.

Notes on use
Using the shoulder strap

Attaches the strap and place it over your shoulder to prevent the camera from damage by being dropped.

1. Attach both tips of the strap.

Notes on use

4-488-060-11(1)
Copyright 2014 Sony Corporation
Using internal memory

The camera has approximately 55 MB of internal memory. You can record images on internal memory when there is no memory card inserted in the camera.

**When a memory card is inserted**
- **[Recording]**: Images are recorded on the memory card.
- **[Playback]**: Images on the memory card are played back.
- **[Menu, Settings, etc.]**: Various functions can be performed on images on the memory card.

**When there is no memory card inserted**
- **[Recording]**: Images are recorded using internal memory.
- You cannot record movies to internal memory when the movie image size is [1280x720(Fine)] or [1280x720(Standard)].
- **[Playback]**: Images stored in internal memory are played back.
- **[Menu, Settings, etc.]**: Various functions can be performed on images in internal memory.

**On image data stored in internal memory**

We recommend that you copy (back up) data using one of the following methods.

**To copy (back up) data on a hard disk of your computer**

Without a memory card inserted in the camera, import the images into a computer.

**To copy (back up) data on a memory card**

Prepare a memory card with sufficient free capacity, then copy the images in internal memory to the memory card.

**Note**

- You cannot transfer image data on a memory card to internal memory.
- By making a USB connection between the camera and a computer with a USB cable, you can transfer data stored in internal memory to a computer. However you cannot transfer data on a computer to internal memory.
Using the control button

The following functions are located on the up/down/right/left side of the control button: DISP (Display Setting), (Self-Timer), (Exposure Compensation) and (Flash).
Press the control button toward each icon to enter the setup screen for each function.

Moving the selection frame on the MENU screen, etc.

Press the up/down/right/left side of the control button to move the selection frame.

Selecting an image to be played back

Press the right or left side of the control button to play back the next/previous image.
Using MENU items (Shooting)

You can select various shooting functions easily from the MENU button.

1. Press the ON/OFF (Power) button and set the camera to shooting mode.

2. Press the MENU button to display the Menu screen.

3. Select the desired menu item with ▲/▼/◄/► on the control button.

4. Press ● on the control button.

Changing camera settings

You can change settings on the [Settings] screen.

1. Press the MENU button to display the Menu screen.

2. Select (Settings) with ↑/↓ on the control button, then press ● to display the setup screen.

3. Select the desired category by using ↑/↓/←/→, then press ● to display the setup screen.

4. Select the desired setting, then press ●.

**Note**
- [Shooting Settings] appears only when settings have been entered from shooting mode.
- [Memory Card Tool] appears only when a memory card is inserted in the camera, while [Internal Memory Tool] appears only when a memory card is not inserted.
Digital Still Camera
DSC-H400

Shooting still images

1. Set the mode dial to [Intelligent Auto], then press the ON/OFF (Power) button.

2. Hold the camera steady to determine the composition of the still image.

3. Press the shutter button halfway down to focus.
   When the image is in focus, a beep sounds and the indicator lights.

   - The shortest shooting distance is approximately 1 cm (0.03 ft.) (W), 350 cm (11.48 ft.) (T) (from lens).
   - Macro mode may be automatically set for some shooting conditions.

4. Press the shutter button fully down.
   - Do not put your fingers on the flash or lens when shooting.
Hint

- When the camera cannot focus automatically, the focus indicator flashes and the beep does not sound. Either recompose the shot or change the focus setting.
- Focusing may be difficult in the following situations:
  - It is dark and the subject is distant.
  - Contrast between the subject and the background is poor.
  - Subject is seen through glass.
  - Subject is moving quickly.
  - There is reflective light or shiny surfaces.
  - Subject is backlit or there is a flashing light.

List of mode dial functions

Sets the mode dial to the desired function.

- **i** (Intelligent Auto):
  You can shoot still images with settings adjusted automatically.

- **P** (Program Auto):
  You can shoot with exposure adjusted automatically (both shutter speed and aperture value (F value)). Also you can select various settings using the menu.

- **A** (Aperture Priority Shooting):
  You can shoot after adjusting aperture value (F value) manually.

- **S** (Shutter Speed Priority Shooting):
  You can shoot after adjusting shutter speed manually.

- **M** (Manual Exposure Shooting):
  You can shoot after adjusting exposure manually (both shutter speed and aperture (F value)).

- **■** (Sweep Panorama):
  You can shoot a panorama image after composing images.

- **■■** (Movie Mode):
  You can change the setting for movie recording.

- **SCN** (Scene Selection):
  You can shoot with preset settings according to the scene.

Scene Recognition

Scene Recognition operates in Intelligent Auto mode. This function lets the camera automatically recognize shooting conditions and shoot the image.

In Scene Recognition, the position of an icon displayed on the screen is different depending on the circumstances. It depends on whether the camera recognizes a scene or condition. If the camera recognizes a scene, icons and guides such as (Portrait), (Night Portrait), (Night Scene), (Backlight Portrait), (Backlight), (Landscape), (Macro), (Spotlight) or (Low Light), are displayed on the first line. If the camera recognizes a condition, icons such as (Tripod) or (Move) are displayed on the second line. The camera may recognize both the scene and condition, or just one.

Shooting panoramic images

You can create a panoramic image from composite images.

1. Open the menu and select (Sweep Panorama) from the shooting modes.

2. Align the camera with the end of the subject to be shot and press the shutter button fully.

3. Pan the camera to the end of the guide (A), following the indicator on the screen.

Tips for shooting a panoramic image

Pan the camera in an arc at a constant velocity in the direction indicated on the screen. Subjects at rest are more suited for panoramic shots than moving subjects. Radius as short as possible.
First press the shutter button halfway so that you can lock focus and exposure. Then press the shutter button fully down and pan or tilt the camera.

If a section with greatly varied shapes or scenery is concentrated along a screen edge, the image composition may fail. In such a case, adjust the frame composition so that the section is in the center of the image, then shoot again.

To shoot a 360 degree panoramic image

This camera is equipped with a panorama shooting function, capable of shooting a nearly 360 degree panoramic image. Shoot a panoramic image by selecting MENU - set [Panorama Image Size] to [360°]. Recorded panoramic images can be scrolled normally when played on the camera.

The image actually recorded may not cover 360 degrees, depending on the subject or the way it is shot.

Note

- If you cannot pan the camera across the entire subject within the given time, a gray area occurs in the composite image. If this happens, move the camera faster to record a full panoramic image.
- Since several images are stitched together, the stitched part will not be recorded smoothly.
- When the whole angle of panoramic shooting and the AE/AF locked angle are very different in brightness, color and focus, the shooting will not be successful. If this happens, change the AE/AF locked angle and shoot again.
- You cannot create panoramic images in the following situations:
  - You pan the camera too quickly or too slowly.
There is too much camera shake.

Scene Selection

You can shoot with preset settings according to the scene.

1. Set the mode dial to **SCN** (Scene Selection).
2. Select the desired mode - ◆ on the control button.
   - If you want to select another Scene Selection mode, select from MENU.

**Portrait**:  
You can shoot images with a softer atmosphere for portraits and flowers, etc.

**Landscape**:  
Allows easy shooting of distant scenes by focusing in the distance. Shoots a clear sky, trees and flowers in vivid colors.

**Night Portrait**:  
You can shoot sharp images of people with a night view in the background, without compromising atmosphere.

**Night Scene**:  
You can shoot night scenes at far distance without losing the dark atmosphere of the surroundings.

**High Sensitivity**:  
You can shoot images without a flash under low light conditions, reducing blur.

**Gourmet**:  
You can shoot food arrangements in delicious and bright colors.

**Pet**:  
You can shoot images of your pet with the best settings.

**Beach**:  
You can shoot scenes on the beach in bright and vivid colors even under sunlight.

**Snow**:  
You can record clear images preventing sunken colors in snowy scenes or other places where the whole screen appears white.

**Fireworks**:  
You can record fireworks in all their splendor.

**Party**:  
You can shoot party scene with bright and vivid tone.

**Note**

- When you shoot images using ◆ (Night Portrait), ◉ (Night Scene) or ☼ (Fireworks) modes, the shutter speed is slower and images tend to blur. To prevent blurring, use of a tripod is recommended.
- When you select ☸ (Party), the image size is limited to a maximum of [5M].
Shutter Speed Priority Shooting

By adjusting shutter speed, you can shoot a moving object with a different representation, such as freezing action, or emphasizing movement with its trace.

1. Set the mode dial to slow (Shutter Speed Priority Shooting).
2. Press on the control button, then select the desired value with / .
3. Focus on your subject and shoot.
   The aperture value is set automatically to achieve correct exposure.

**Note**
- If proper exposure is not obtained after making settings, the setting value indicators on the screen blink. You can shoot in this condition, but we recommend that you readjust the values that blink.
- When the shutter speed is fast, the amount of light may be insufficient even if you fire the flash.
- When you set the shutter speed slower, using a tripod is recommended to prevent the effects of vibration.
- If you select slow shutter speeds, it takes time to process data.
- In [Shutter Speed Priority Shooting] mode, [ SteadyShot warning ] is not displayed.
- If you shoot with the shutter speed set to 1 second or slower (long exposure shooting), the noise reduction process works for the same period of time as the time the shutter has been open (Long Exposure NR). You cannot do any further shooting during the reduction.
- The brightness of the image displayed on the screen may differ from the actual recorded image.

**Hint**
- With a faster shutter speed, moving subjects (people running, moving cars, splashing water, etc.) will appear stationary. With a slower shutter speed, moving subjects (flowing river, etc.) will portray more natural aspects of motion.
Aperture Priority Shooting

You can adjust focus range or degree of background defocus.

1. Set the mode dial to A (Aperture Priority Shooting).

2. Press ◀ on the control button, then select the desired value with ◀ / ◀.
   - Decrease the aperture value: foreground and background are not focused.
   - Increase the aperture value: foreground and background are clearly focused.

3. Focus on your subject and shoot.
   - Shutter speed is set automatically to achieve correct exposure.

**Note**
- If proper exposure is not obtained after making settings, the setting value indicators on the screen flash. You can shoot in this condition, but we recommend that you adjust the flashing values again.
- The brightness of the image displayed on the screen may differ from the actual recorded image.

**Hint**
- With a lower aperture value (wider aperture), depth of field in front of and behind the subject is shallower, rendering surroundings softly focused, and the subject more distinctly portrayed. With a higher aperture value (narrower aperture), the depth of field in front of and behind the subject is deeper, portraying more landscape depth.

Notes on use

Digital Still Camera
DSC-H400

Manual Exposure Shooting

You can shoot at your favorite exposure by manually setting shutter speed and aperture value.

1. Set the mode dial to **M** (Manual Exposure Shooting).
2. Press **○** on the control button.
3. Press **▲ / ▼** to select the desired shutter speed, and press **◄ / ►** to select the aperture (F value).
   - Select a shutter speed from 1/2000 seconds to 30 seconds.
   - When zoom is set fully to **W**, you can select an aperture of F3.4 or F8.1.
     When zoom is set fully to **T**, you can select an aperture of F6.5 or F8.0.
4. Press the shutter button to shoot the image.

**Setting the shutter speed and aperture (F value)**

The difference between the settings and the proper exposure as judged by the camera appears as an Exposure Compensation value on screen.

A: Shutter speed/aperture (F value)
B: Exposure Compensation value

- **0EV** is the value judged as the most suitable by the camera.
- When the shutter speed is one second or slower, the shutter speed is indicated by ["], for example, ["1"].
- When you set the shutter speed slower, using a tripod is recommended to prevent the effects of vibration.
- When the shutter speed becomes slower than a certain speed, the NR slow shutter function is activated automatically to reduce image noise, and **NR** appears on the screen.
- If you select slow shutter speeds, it takes time to process the data.

**Note**

- If proper exposure is not obtained by your settings, setting value indicators on the screen will flash when the shutter
button is pressed halfway down. You can shoot in this condition, but exposure readjustment is recommended.

- You cannot select shutter speed and aperture (F value) when the self-timer is set to [Self-portrait One Person] or [Self-portrait Two People].
Digital Still Camera
DSC-H400

Zoom

You can enlarge the image when shooting. The camera's optical zoom function can enlarge images up to 63×.

1. Turn the W/T (zoom) lever to the T side to zoom in, W side to zoom out.

Note

- Zoom is locked to the W side in Sweep Panorama mode.
- The operating sound of the lens is recorded when the zoom function operates while shooting a movie.

Digital Zoom

Selects digital zoom mode. The camera enlarges the image using optical zoom (up to 63×). When the zoom scale is exceeded, the camera uses either smart or precision digital zoom.

1. Set the camera to shooting mode.

2. MENU - (Settings) - (Shooting Settings) - [Digital Zoom] - desired mode -  on the control button

(Smart)(Default settings):
Enlarges the image digitally within the range where the image will not be distorted, according to the image size (Smart zoom).

(Precision):
Enlarges all image sizes by the total zoom scale of approximately 126×, including the optical zoom 63×. However, note that image quality deteriorates when the optical zoom scale is exceeded (Precision digital zoom).

Off:
Does not use digital zoom.

Note

- [Digital Zoom] is not available in the following situations:
  - In [Sweep Panorama]
  - When [Self-Timer] is set to [Self-portrait One Person] or [Self-portrait Two People].
- Smart zoom is not available when you record movies or the image size is set to [20M] or [16:9 (15M)].
- The Face Detection function does not operate in the range of [Digital Zoom].

Total zoom scale when using Smart zoom (including optical zoom 63×)

The supported zoom ratio differs depending on image size.

Image size and total zoom scale:

**10M:** Approx. 89×
**5M:** Approx. 120×
**VGA:** Approx. 500×
**16:9(2M):** Approx. 160×
Digital Still Camera
DSC-H400

DISP (Display Setting)

Sets the display setting mode.

1. Press DISP (Display Setting) on the control button.

2. Select the desired mode with the control button.

 ■ (OFF):
 Displays only images.

 ■ (Detailed Info):
 Displays information. Exif data for the recorded image and the histogram are also displayed.

 ■ (ON) (Default setting):
 Displays information.

Histogram

A histogram is a graph showing the brightness of an image. The graph display indicates a bright image when skewed to the right side (A), and a dark image when skewed to the left side (B).
1. Press **DISP** (Display Setting) on the control button, then select [Detailed Info].

**Note**

- The histogram also appears when playing back a single image, but you cannot adjust exposure.
- The histogram does not appear when:
  - Recording/playing back movies
  - Viewing vertical orientation images
  - Rotating still images
  - Shooting/viewing in [Sweep Panorama]
- The histogram may not appear for images recorded using other cameras.
Flash

When shooting in low light or backlit conditions, you can brighten the subject by using flash. In addition, the flash helps to reduce camera shake.

1. Press the flash unit pop-up button to raise the flash.
   - When the flash unit is not raised, the flash mode is set to (Off) automatically. You cannot change the setting.

2. Press (Flash) on the control button.

3. Select the desired mode with the control button.

(Advanced Flash): Flashes to a farther distance by increasing the upper limit value of ISO sensitivity.

(Auto) (Default setting): Flashes automatically operates in dark locations or when there is a backlight.

(On): Flashes always operates.

(Slow Synchro): Flashes always operates.
The shutter speed is slow in a dark place to clearly shoot background that is out of flash light.

When "White circular spots" appears in flash photos

These spots are caused by particles (dust, pollen, etc.) floating close to the lens. When they are accentuated by the camera’s flash, they appear as white circular spots.

How can the "White circular spots" be reduced?

- Light the room and shoot the subject without flash.
- If you select (High Sensitivity) mode in Scene Selection, [Flash] is automatically set to [Off].

Note

- While charging the flash, is displayed.
You cannot use flash during burst shooting.

- $\text{Adv.}$ (Advanced Flash) can be selected only in [Intelligent Auto] mode. When $\text{Adv.}$ (Advanced Flash) is selected, the maximum size of [Still Image Size] is [5M]. If [Still Image Size] is set to larger than [5M], [Still Image Size] is set to [5M] automatically.

- When shooting with flash and zoom is set to W, the shadow of the lens may appear on the screen, depending on shooting conditions. If this happens, set the zoom to T and shoot with flash again.

- When not using flash, keep the flash down.

Notes on use

Focus

You can change the focus method. Use the menu when it is difficult to get proper focus in auto focus mode. AF stands for "Auto Focus," a function that adjusts focus automatically. The selected AF range finder frame appears on the screen.

1. MENU - (Focus) - desired mode

**Multi AF** (Default setting):
Focuses on a subject in all ranges of the finder frame automatically. When you press the shutter button halfway down in still image shooting mode, a green frame is displayed around the area that is in focus.

*When the Face Detection function is active, AF operates with priority on faces.*

**Center AF**:
Focuses on a subject in the center of the finder frame automatically. Using the AF lock function together, you can compose the image the way you want.

**Spot AF**:
Focuses on an extremely small subject or a narrow area automatically. Using the AF lock function together, you can compose the image the way you want.

Hold the camera steady so as not to misalign the subject and the AF range finder frame.

Note
• When you use [Digital Zoom] or [AF Illuminator], the AF range finder frame is disabled and appears in a dotted line. In this case, the camera works to focus on the subjects at the center of the screen.
• If tracking focus is activated, the camera focuses with priority on the subject to be tracked.

**Focusing on subjects near the edge of the screen**

If the subject is out of focus, do as follows:

1. Recompose the shot so that the subject is centered in the AF range finder (A), and press the shutter button halfway to focus on the subject (AF lock).
2. When the AE/AF lock indicator (B) stops flashing and remains on, return to the fully composed shot, and press the shutter button fully down.

---

TRACKING FOCUS

Tracks the subject and adjusts focus automatically even when the subject is moving.

1. Point the camera at the subject, and press ● on the control button.
   The target frame appears.

2. Place the target frame over the subject you want to focus on, and press ●.
   Tracking begins.

3. Press the shutter button to shoot the image.

Tracking a face

If you use the tracking focus function while the Face Detection function is activated, you can select a face to be given priority and register that face with the camera.

Note

- You cannot use tracking focus in the following situations:
  - Zoom functions other than optical zoom
  - When the camera is set to [Aperture Priority Shooting], [Shutter Speed Priority Shooting] or [Manual Exposure Shooting].
- Tracking focus will automatically be canceled when the subject disappears from the screen or has failed to be tracked.

AF Illuminator

The AF illuminator supplies fill light to focus more easily on a subject in dark surroundings. The AF illuminator emits red light allowing the camera to focus easily when the shutter button is pressed halfway, until focus is locked. The indicator appears at this time.

1. Set the camera to shooting mode.

2. MENU - (Settings) - (Shooting Settings) - [AF Illuminator] - desired mode - on the control button

**Auto (Default setting):**
Sets whether to use the AF illuminator automatically in dark surroundings.

**Off:**
Does not use the AF illuminator.

**Note**
- Focus is achieved as long as the AF illuminator light reaches the subject, regardless of whether light fails to reach the center of the subject.
- You cannot use the AF illuminator in the following situations:
  - In movie mode
  - In [Sweep Panorama]
  - When (Landscape), (Night Scene), (Pet) or (Fireworks) mode is selected in Scene Selection.
  - When [Self-Timer] is set to [Self-portrait One Person] or [Self-portrait Two People].
- When you use the AF illuminator, the normal AF range finder frame is disabled and a new AF range finder frame is displayed by a dotted line. AF operates with priority on subjects located near the center of the frame.
- The AF illuminator emits very bright light. Although there is no health hazard, do not look directly into the AF illuminator emitter at close range.
Exposure Compensation

You can adjust exposure manually in 1/3 EV steps in a range of –2.0 EV to +2.0 EV.

1. on the control button - desired Exposure Compensation

Adjusting exposure for better looking images

A: Overexposure (too much light)
B: Correct exposure
C: Underexposure (too little light)

- When the image shot is overexposed, adjust [Exposure Compensation] to the minus side.
- When the image shot is underexposed, adjust [Exposure Compensation] to the plus side.

Note

- If you shoot a subject in extremely bright or dark conditions, or when you use flash, exposure adjustment may not be effective.

Notes on use

Digital Still Camera
DSC-H400

Metering Mode

Selects the metering mode that sets which part of the subject to measure to determine exposure.

1. MENU - (Metering Mode) - desired mode

- **(Multi)(Default setting):**
  Divides into multiple regions and measures each region. The camera determines a well-balanced exposure (Multi-pattern metering).

- **(Center):**
  Measures the center of the image, and determines exposure based on the brightness of the subject there (Center-weighted metering).

- **(Spot):**
  Align the spot metering cross hairs (A) on the subject to meter one part of the subject (Spot metering). This function is useful when the subject is backlit or when there is strong contrast between the subject and background.

![Spot metering cross hairs](image)

**Notes on use**

4-488-060-11(1)

Copyright 2014 Sony Corporation
Cont. Shooting Settings

You can select Single Shooting or Continuous Shooting as the shooting mode.

1. MENU -  (Cont. Shooting Settings) - desired mode

( Single Shooting)(Default setting):
Shoots a single image.

(Continuous Shooting):
Shoots up to 100 frames and up to approximately 0.71 frames per second when you continue to hold down the shutter button.

Note

- [Flash] is set to [Off].
- When recording with the self-timer, a series of up to 5 images is recorded.
- The recording interval becomes longer, depending on the setting for the image size.
- [Focus], [White Balance], and [Exposure Compensation] are adjusted for the first image, and these settings are also used for other images.
- When internal memory or a memory card is full, the burst stops.
Self-Timer

You can shoot with a 10-second or 2-second delay using the self-timer.

1. Press (Self-Timer) on the control button.
2. Select the desired mode with the control button.

**Off (Off) (Default setting):**
Does not use the self-timer.

**10 sec (10sec):**
Sets the self-timer to a 10-second delay.
When you press the shutter button, the self-timer lamp flashes and a beep sounds until the shutter operates. To cancel, press again.

**2 sec (2sec):**
Sets the self-timer to a 2-second delay.

**Self-portrait One Person:**
Sets the self-timer to Self-portrait timer.
When the camera detects the specified number of faces, a beep sounds, and the shutter operates 2 seconds later.

**Self-portrait Two People:**

**Tips for preventing blur**

If your hands or body move while holding the camera and pressing the shutter button, "Camera shake" occurs. Camera shake occurs frequently under low-light or slow shutter speed conditions, such as those encountered in (Night Portrait) or (Night Scene) mode.

To reduce camera shake, set the self-timer to a 2-second delay and brace your arms against your sides after pressing the shutter button.

**Automatic shooting with Self-portrait timer**

Point the lens at yourself so that the selected number of faces is reflected in the screen. The shutter operates automatically. Do not move your camera after the beep sounds.

Bracket Setting

You can set the type of bracket shooting. In bracket shooting mode, you can record a series of 3 images with the setting changed. You can select the most suitable image afterwards.

1. MENU - (Bracket Setting) - desired mode

**BRK OFF** *(Default setting):*
Does not use bracket shooting.

**±0.3** *(EXP±0.3):*
**±0.7** *(EXP±0.7):*
**±1.0** *(EXP±1.0):*
Records a series of 3 images with the exposure shifted in the following order: standard, dark, and bright. The larger the bracket step value, the larger the shift of the exposure value.

**BRK WE** *(White Balance):*
Records a series of 3 images with white balance shifted in the following order: current color tone, toward blue, and toward red.

- When you set [White Balance] to other than [Auto] color tone is shifted based on the selected white balance.

**Note**

- You cannot select [White Balance] when the mode dial is set to SCN *(Scene Selection).*

---

**Notes on use**

4-488-060-11(1)

DRO

Analyzes the shooting scene and automatically corrects brightness and contrast to improve image quality. DRO stands for "Dynamic Range Optimizer," a function that automatically optimizes the difference between light and dark parts of an image.

1. MENU - DRO (DRO) - desired mode

**DRO (Off):**
Does not adjust.

**DRO Standard (Default setting):**
Adjusts brightness and contrast of images automatically.

**DRO plus:**
Adjusts image brightness and contrast automatically and strongly.

**Note**
- Depending on shooting conditions, it may not be possible to obtain correction effects.
- Only [ISO AUTO] or values from [ISO 80] to [ISO 800] can be set for the ISO value when [DRO plus] is set.
Digital Still Camera
DSC-H400

ISO

Selects luminous sensitivity when the camera is set to Program Auto. In Movie mode, [ISO] is fixed to [Auto].

1. MENU - [ISO] - desired mode

(Auto)(Default setting):
Sets ISO sensitivity automatically.

You can reduce image blurring in dark locations or with moving subjects by increasing ISO sensitivity (select a larger number).

**Adjusting ISO Sensitivity (Recommended Exposure Index)**
ISO sensitivity is a speed rating for recording media that incorporates an image sensor that receives light. Even when the exposure is the same, images differ depending on the ISO sensitivity.

**High ISO sensitivity**
Records a bright image even in dark locations while increasing shutter speed to reduce blur. However, the image tends to be noisy.

**Low ISO sensitivity**
Records a smoother image.
However, when exposure is insufficient, the image may be darker.
White Balance

Color tones are adjusted according to surrounding light conditions. Use this function if image color appears unnatural.

1. MENU - (White Balance) - desired mode

**WB** (Auto) (Default setting):
Adjusts white balance automatically so that colors appear natural.

**Sun** (Daylight):
Adjusts for outdoors conditions on a fine day, evening views, night scenes, neon signs, fireworks, etc.

**Clouds** (Cloudy):
Adjusts for a cloudy sky or a shady location.

**Fluorescent White Balance 1**:
Adjusts for white fluorescent lighting.

**Fluorescent White Balance 2**:
Adjusts for natural white fluorescent lighting.

**Fluorescent White Balance 3**:
Adjusts for daylight fluorescent lighting.

**Incandescent**:
Adjusts for places under incandescent lamp, or under bright lighting, such as in a photo studio.

**Flash** (Flash):
Adjusts for flash conditions.

**One Push**:
Adjusts white balance depending on the light source. Use this mode when [Auto] and other settings do not provide accurate colors.

**One Push Set**:
Memorizes the basic white color which will be used in [One Push] mode.

**Note**

- When shooting with a flash in other than [Flash] mode, [White Balance] is set to [Auto].
- When [Flash] is [On] or [Slow Synchro], white balance can only be adjusted to [Auto], [Flash], [One Push] or [One Push Set].

**To capture a basic white color in [One Push Set] mode**

1. Frame a white object such as a piece of paper filling the screen under the same lighting conditions as you will shoot the subject.
2. MENU - **WB** (White Balance) - [One Push Set] -  on the control button

The screen momentarily turns black, and when white balance has been adjusted and stored in memory, the recording
screen is displayed again.

**Note**

- If the indicator flashes while shooting, white balance is either not set or cannot be set. Use automatic white balance.
- Do not shake or strike the camera while [One Push Set] is in progress.
- When flash mode is set to [On] or [Slow Synchro], white balance is adjusted to the condition with the flash emitting.

---

Picture Effect

You can shoot a still image with original texture, according to the desired effect.

1. Set the mode dial to \textbf{P} (Program Auto), \textbf{S} (Shutter Speed Priority Shooting), \textbf{A} (Aperture Priority Shooting) or \textbf{M} (Manual Exposure Shooting).

2. MENU - \textbf{Picture Effect} - desired mode
   - If you want to select another Picture Effect mode, select from MENU.

3. Shoot with the shutter button.

\textbf{(Off)}:
Does not use Picture Effect.

\textbf{(Toy camera)}:
You can shoot images with effects such as tunnel effect, high contrast, or color cast as if they were shot with a toy camera. You can change color hue using MENU - [Color hue].

\textbf{(Pop Color)}:
You can shoot a pop art-like colorful image with emphasis on color tone.

\textbf{(Partial Color)}:
You can shoot an image that makes a strong impression by leaving a specified color on portions of a monochrome image. You can select the color to extract using MENU - [Extracted Color].

\textbf{(Soft High-key)}:
You can shoot soft, clear images with an emphasis on brightness.

Related Topic

- \textbf{Color hue}
- \textbf{Extracted Color}

Notes on use
Color hue

When you select [Toy camera] in Picture Effect, adjusts color hue.

1. MENU - (Color hue) - desired mode

- **(Normal)** (Default setting):
  Adds a normal hue and darkens the surroundings.

- **(Cool hue):**
  Adds a cool bluish hue and darkens the surroundings.

- **(Warm hue):**
  Adds a warm reddish hue and darkens the surroundings.

- **(Green hue):**
  Adds a green filter-like hue and darkens the surroundings.

- **(Magenta hue):**
  Adds a magenta filter-like hue and darkens the surroundings.

**Note**

- It is recommended that you shoot a test image in advance for some subjects.

**Related Topic**

- Picture Effect
Extracted Color

When you select [Partial Color] in [Picture Effect], select the color to extract.

1. MENU - (Extracted Color) - desired mode

- **(Red)** *(Default setting):*
  Extracts red only.

- **(Green):**
  Extracts green only.

- **(Blue):**
  Extracts blue only.

- **(Yellow):**
  Extracts yellow only.

**Note**

- Images may not retain the selected color, depending on the subject.

**Related Topic**

Face Detection

When the Face Detection function is used, the camera detects the faces of your subjects and adjusts the focus, flash, exposure, white balance and red-eye reduction settings automatically.

1. MENU - [ ] (Face Detection) - desired mode

[ ] (Off):
Cannot use Face Detection.

[ ] (Auto)(Default setting):
Selects the face the camera is to automatically focus on.

Note

- [Off] is not available when [Self-Timer] is set to [Self-portrait One Person] or [Self-portrait Two People].
- You can select [Face Detection] only when the focus mode is set to [Multi AF] and the metering mode is set to [Multi].
- The Face Detection function does not operate when you use the digital zoom.
- Up to eight faces of your subjects can be detected.

Red Eye Reduction

The flash strobes two or more times before shooting to reduce the red-eye phenomenon when using flash.

1. Set the camera to shooting mode.
2. MENU - (Settings) - (Shooting Settings) - [Red Eye Reduction] - desired mode -

**Auto (Default setting):**
When the Face Detection function is activated, the flash strobes automatically to reduce the red-eye phenomenon.

**On:**
The flash always strobes to reduce the red-eye phenomenon.

**Off:**
Does not use Red Eye Reduction.

**What causes the red-eye phenomenon?**
Pupils become dilated in dark environments. Flash light is reflected off blood vessels at the back of the eye (retina) (A), causing the "red-eye" phenomenon.

**Other ways to reduce red-eye**
Select (High Sensitivity) mode in Scene Selection. (The flash is set to [Off] automatically.)

**Note**
- To avoid blurring of images, hold the camera firmly until the shutter is released. It usually takes a second until the shutter is released, and also be sure not to allow the subject to move during this period.
- Red Eye Reduction may not produce the desired effects. It depends on individual differences and conditions, such as the distance to the subject or if the subject looked away from the pre-strobe.
- If you do not use the Face Detection function, Red Eye Reduction does not work, even when you select [Auto].
- [Red Eye Reduction] is set to [Off] in the following situations:
  - When (Night Scene), (High Sensitivity), (Gourmet) or (Pet) mode is selected in Scene Selection.
Write Date

Sets whether to record a shooting date on the still image.

1. Set the camera to shooting mode.

2. MENU -  (Settings) -  (Shooting Settings) - [Write Date] - desired mode -

**On:**
Records a shooting date.
When [On] is selected, the "DATE" mark will appear on the screen while shooting. However, in some shooting modes that cannot record dates on images, the "DATE" mark will disappear.

**Off (Default setting):**
Does not record a shooting date.

**Note**
- You cannot record dates in the following situations:
  - In movie mode
  - When shooting panoramic images
  - In burst shooting mode
  - In [Easy Mode]
- If you shot images with the date once, you cannot delete the date from the images later.
- Dates are doubly printed, if you set the camera to superimpose the dates when printing.
- The recorded time of the image cannot be superimposed on the image.

Notes on use

Image Index

When you play back images, you can display multiple images at the same time.

1. Set the camera to playback mode.

2. Turn the W/T (zoom) lever to the W side (⿷) to display the image index screen.
   Turn the lever again to display an index screen with more images. Turn the lever yet again to view images with the Calendar while playing back in [Date View].

3. To return to the single-image screen, select an image with the control button, then press ●.

**Displaying images of the desired folder**

Select the left side bar with the control button, then select the desired folder with ▲/▼.

**Viewing images with the Calendar**

When [View Mode] is set to [Date View] and the screen display is in index mode, turn the W/T (zoom) lever to the W side (⿷) to view images in the Calendar.

- To select the month you want to display, select ▲/▼ using the control button, then the desired month.
- To view images in the selected date in index mode, select the date using the control button, then press ●.
- To cancel the calendar display and return to an index screen, select ● using the control button, then press ●.
Deleting images

You can select and delete unwanted images. You can also delete images from the MENU button.

1. Set the camera to playback mode.
2. (Delete) button - operate in accordance with the screen.

**All in This Folder:**
Deletes all images in the selected date range or folder at once.

**All Images on This Date:**
Deletes all images in the selected date range or folder at once.

**Multiple Images:**

1. After step 2, select an image to be deleted, then press .
   To cancel the selection, press again to cancel the mark.
2. MENU - [OK] -

**This Image:**
Deletes the image in single-image mode.

**Cancel:**
Cancels the deletion.

**Hint**

You can switch between index and single-image mode when selecting images

Turn the W/T (zoom) lever to the T side (Q) in index mode to return to single-image mode, and turn the lever to the W side (W) in single-image mode to return to index mode.

**Note**

- When using internal memory, still images and movies are displayed in the same folder in folder view.
Viewing movies

You can play back recorded movies.

1. Select the desired movie you want to play back using the control button.

2. Press ◀ to play back.

**Action during movie playback**

- ◀: Pause/Play
- ▶: Fast forward
- ◁: Fast rewind
- ▼: Displays the volume control screen. Adjust the volume using ▲/▼ and determine with ◀, then the volume control screen disappears.

**Note**

- You may not be able to play back some movies shot using other cameras.

Playing back panoramic images

You can view an entire panoramic image with automatic scrolling.

1. Select the desired panoramic image using the control button.

2. Press ⌘ to play back.

(A): Shows the displayed area of the whole panorama image

- To pause the playback, press ⌘ again.
- Scroll with ▲ / ▼ / ◀ / ►.
- Return to the full view by the W side of the zoom lever.

Note

- A panoramic image recorded using another camera may appear in an image size different from the original one, or may not be played back correctly with scrolling.
Print (DPOF)

DPOF (Digital Print Order Format) is a function that you can specify the images of the memory card that you want to print out later. The DPOF (Print order) mark is displayed for registered images.

1. Set the camera to playback mode.
2. MENU - DPOF - desired mode - on the control button

**DPOF (This Image):**
Orders printing the currently displayed image in single-image mode.

**DPOF (Multiple Images):**
You can select and order multiple images to be printed.

1. After step 2, select an image to be printed, then press .
   To cancel the selection, press again to cancel the mark.
2. MENU - [OK] -

**Note**
- The DPOF (Print order) mark cannot be added to the following images:
  - Movies
  - Images in internal memory
- You can add a DPOF (Print order) mark to a maximum 999 images.

**Clearing the DPOF mark**
Select the image to clear the DPOF registration, then press on the control button in the same procedure as when making a DPOF mark. The DPOF mark disappears and the DPOF registration is cleared.
Printing still images

You can print still images using the following methods.

- Printing directly using a printer which supports your memory card type.
  For details, see the operating instructions supplied with the printer.
- Printing using a computer
  You can import images to a computer using the PlayMemories Home software and print the images. You can print images with the date.
  For details, see the PlayMemories Home Help Guide.
- Printing at a shop
  You can take a memory card to a photo printing service shop. As long as the shop supports photo printing services conforming to DPOF, you can make a DPOF (Print order) mark on images in advance in playback mode so that you do not have to reselect them when you print them out at the shop.
  Before you take image data to a shop, always copy (back up) your data.

**Note**

- When you print still images shot in [16:9] mode, both edges may be cut off.
- You cannot print panoramic images, depending on the printer.

**Related Topic**

Slideshow

Images are automatically played back in succession.

1. Set the camera to playback mode.
2. MENU - [Slideshow] - desired slideshow - • on the control button

(Continuous Playback):
Starts playback from the currently displayed image.

(Show with music):
Plays back still images in succession along with effects and music.

Continuous Playback

1. Select the desired image for playing with the control button.
2. MENU - [Slideshow] - [Continuous Playback] - •

Below are control button and action:

• : Stop
▲ : Sets display settings.
▼ : Displays the volume control screen.
• Adjust the volume with ▲ / ▼ on the control button, then press •.
▲ : Rewinds image.
▼ : Forwards image.

Viewing panoramic images during continuous playback
The whole panoramic image is displayed for 3 seconds. You can scroll a panoramic image by pressing •.

Slideshow with music

1. MENU - [Slideshow] - [Slideshow with music] - • on the control button
2. Select a desired setting.
3. [Start] - •
4. Press • to end the slideshow.

Note

- [Slideshow with music] is not available for panoramic images.

Playback Selection:

Selects the group of images to be shown.

All (Default setting): Plays a slideshow of all images in order.
This Date: Plays a slideshow of images with the currently selected date range when [View Mode] is [Date View].
Folder: Plays a slideshow of images in the currently selected folder in Folder View.
**Effects:**
Selects the playback speed and mood for slideshows.
- **Simple** (Default setting): A simple slideshow switching images at a preset interval. The playback interval is adjustable in [Interval] and you can thoroughly enjoy your images.
- **Nostalgic**: A moody slideshow reproducing the atmosphere of a movie scene.
- **Stylish**: A stylish slideshow proceeding at middle tempo.
- **Active**: A high-tempo slideshow suitable for active scene.

**Music:**
Specifies the music to be played during slideshows. You can select more than one background music track. Press ▼ on the control button to display the volume control screen, then press ▲ / ▼ to adjust the volume.
- **Music1**: The default setting for a [Simple] slideshow.
- **Music2**: The default setting for a [Nostalgic] slideshow.
- **Music3**: The default setting for a [Stylish] slideshow.
- **Music4**: The default setting for a [Active] slideshow.
- **Muting**: Does not use music.

**Note**
- Movies are played back without their audio.

**Interval:**
Sets the screen switching interval. The setting is fixed to [Auto] when [Simple] is not selected as [Effects].
- 1 sec:
- 3 sec (Default setting):
- 5 sec:
- 10 sec:
Sets the display interval of images for a [Simple] slideshow.
- **Auto**: The interval is set to suit the selected [Effects] item.

**Selecting background music**
You can transfer a desired music file from your CDs or MP3 files to the camera to play back during a slideshow. To transfer music, install the Music Transfer software to your computer.

Rotate

A still image can be rotated. Use this to display a horizontal orientation image in vertical orientation.

1. Set the camera to playback mode.

2. MENU - (Rotate) - on the control button

**Note**

- You cannot rotate the following images:
  - Movies
  - Protected still images
- You may not be able to rotate images shot with other cameras.
- When viewing images on a computer, the image rotation information may not be reflected, depending on the software.
Protect

You can protect recorded images against accidental erasure.
The \(\text{\textcircled{\text{P}}}\) mark is displayed for registered images.

1. Set the camera to playback mode.

2. MENU - \(\text{\textcircled{\text{P}}}\) (Protect) - desired mode - \(\text{\textbullet}\) on the control button

\(\text{\textcircled{\text{P}}}\) (This Image):
Protects the currently displayed image in single-image mode.

\(\text{\textcircled{\text{P}}} \text{\textcircled{\text{P}}}\) (Multiple Images):
You can select and protect multiple images.

1. After step 2, select an image to be protected, then press \(\text{\textbullet}\).
   
   To cancel the selection, press \(\text{\textbullet}\) again to cancel the \(\checkmark\) mark.

2. MENU - [OK] - \(\text{\textbullet}\)

**Note**
- When internal memory is used for recorded images, View Mode is set to Folder View and still images and movies are displayed in the same folder.

**To cancel protection**
Select the image for which you want to cancel protection, and unlock it by pressing \(\text{\textbullet}\) on the control button as the same procedure to protect it. The \(\text{\textcircled{\text{P}}}\) indicator disappears, and the protection is released.
Viewing an image on a Standard Definition (SD) TV

You can view images recorded on the camera in standard picture quality by connecting the camera to a Standard Definition (SD) TV. Refer also to the operating instructions supplied with the TV.

1. Turn off the power of the camera and the TV.

2. Connect the USB / A/V OUT terminal (A) and audio/video input jacks on the TV (B) using the dedicated A/V cable VMC-15CSR1 (sold separately) (C).

3. Turn on the TV and set the input.

4. Press ON/OFF (Power) button, then set the camera to playback mode.
   Images shot with the camera appear on the TV. Select the desired image with the control button.

**Note**

- When using the camera abroad, it may be necessary to switch [Video Out].

- Eye-Fi cards are sold in some countries or regions.
- For more information on the Eye-Fi card, contact the manufacturer or seller of Eye-Fi cards directly.
- Eye-Fi cards are permitted only in the countries and regions in which they were purchased. You may be held liable due to local restrictions.
- The Eye-Fi card has a wireless LAN function. Do not insert the Eye-Fi card where wireless LAN is prohibited, such as while aboard an airplane. If the Eye-Fi card is inserted, set [Eye-Fi] to [Off]. When the uploading function of the Eye-Fi card is set to [Off], is displayed on the screen.

**Transferring image data using the Eye-Fi card**

1. Set the wireless LAN access point settings or the transferring direction settings of the Eye-Fi card.
   For details, refer to the operating instructions supplied with the Eye-Fi card.
2. After the settings are finished, insert the Eye-Fi card into the camera, and shoot the images.
   The recorded images are automatically transferred via wireless LAN to a computer, etc.

**Note**
- When uploading image data, [Power Save] is not available.
- If the (error) icon is displayed, eject and re-insert the Eye-Fi card, or turn the power of the camera off and on again. If the (error) icon is still displayed, the Eye-Fi card may be corrupted. For details, contact Eye-Fi, Inc.
Wireless LAN communication may be interrupted by other communication devices. If data reception is insufficient, move the camera closer to the access point.

Some Eye-Fi cards have an "Endless Memory Mode." This product does not support "Endless Memory Mode." Make sure that Eye-Fi cards that you insert into this product have "Endless Memory Mode" turned off. For details on setting "Endless Memory Mode", refer to the operating instructions supplied with the Eye-Fi card.

Power Save

Sets the length of time until the screen goes dark and the time until the camera turns off. If you do not operate the camera for a certain period of time while the power is on using the battery pack, the screen goes dark and the camera later turns off automatically to prevent wearing down the battery pack (Auto power-off function).

1. MENU - ⋮ (Settings) - ⚙ (Main Settings) - [Power Save] - desired mode -  

Max:
Saves battery power better than when set to [Standard]. If the camera is not operated for a certain period of time, the power turns off automatically. In shooting mode, the screen automatically goes dark before the power turns off.

Standard (Default setting):
If the camera is not operated for a certain period of time, the power turns off automatically. In shooting mode, the screen automatically goes dark before the power turns off. It takes longer before the power turns off than when set to [Max].

Off:
Does not use the Auto power-off function.

**Note**
- The camera does not turn off automatically in the following situations:
  - During slideshow
  - During playing back movies
  - During Eye-Fi connection

---

**Notes on use**

Format

Formats the memory card or the internal memory.
When you use a memory card with this camera for the first time, it is recommended to format the card using the camera for stable performance of the memory card before shooting. Note that formatting permanently erases all data on the memory card, and is unrecoverable. Save precious data on a computer, etc.

1. MENU -  
(Settings) -  
(Memory Card Tool) or  
(Internal Memory Tool) - [Format] - [OK] -

Note

- Note that formatting permanently erases all data including even protected images.

Notes on use

4-488-060-11(1)

Copyright 2014 Sony Corporation
Create REC.Folder

Creates a folder in a memory card for recording images. Images are recorded in the newly created folder until you create another folder or select another recording folder.

1. MENU - (Settings) - (Memory Card Tool) - [Create REC.Folder] - [OK] -

Hint

On folders

After a new folder is created, you can change the storage destination folder.

Note

- This item is not displayed when internal memory is used to record images.
- When you insert a memory card that was used with other equipment into the camera and shoot images, a new folder may be automatically created.
- Up to 4,000 images can be stored in one folder. When the folder capacity is exceeded, a new folder is automatically created.

Notes on use

4-488-060-11(1)

Digital Still Camera
DSC-H400

Change REC.Folder

Changes the folder in the memory card that is currently used for recording images.

1. MENU - Settings - (Memory Card Tool) - [Change REC.Folder]

2. Select a folder with / on the control button.

3. [OK] -

Note
- This item is not displayed when the internal memory is used to record images.
- You cannot select a folder with a number that has only "MSDCF" or "ANV01" as a recording folder.
- You cannot move recorded images to another folder.

Notes on use

4-488-060-11(1)
Copyright 2014 Sony Corporation
Delete REC.Folder

Deletes a folder for recording images in a memory card.

1. MENU - (Settings) - (Memory Card Tool) - [Delete REC.Folder]

2. Select a folder with ◀/▶ on the control button.

3. [OK] - ●

**Note**

- This item is not displayed when internal memory is used to record images.
- If you delete the folder set as the recording folder using [Delete REC.Folder], the folder that has the largest folder number is selected as the next recording folder.
- If a folder contains protected images, images other than protected images are deleted and the folder will remain.
- If a folder contains files that cannot be played back by the camera, you cannot delete a folder.

*Notes on use*

4-488-060-11(1)
Copyright 2014 Sony Corporation
Copy

Copies all images in the internal memory to a memory card.

1. Insert a memory card with sufficient free capacity into the camera.

2. MENU - (Settings) - (Memory Card Tool) - [Copy] - [OK] -

**Note**

- Make sure there is sufficient battery power. Otherwise, the battery power may run out when you attempt to copy image files, causing the copy to fail and possibly corrupt the data.
- Images cannot be copied individually.
- Original images in internal memory are retained even after copying. To delete contents of internal memory, remove the memory card after copying, then format internal memory ([Format] in [Internal Memory Tool]).
- A new folder is created on the memory card and all data will be copied to it. You cannot choose a specific folder and copy images to it.
File Number

Selects the method used to assign file numbers to images.

1. MENU - 
   (Settings) - 
   (Memory Card Tool) - [File Number] - desired mode -  ●

**Series (Default setting):**
Assigns sequential numbers to files even if the recording folder or the memory card is changed. (When the replaced memory card contains a file with a number higher than the last assigned number, the higher number is incremented and assigned.)

**Reset:**
Starts from 0001 each time the folder is changed. (When the recording folder contains a file, a number one higher than the largest number is assigned.)

---

Area Setting

Sets the area in which you are using this camera.

1. MENU -  (Settings) -  (Clock Settings) - [Area Setting] - desired mode - [OK] -

**Home (Default setting):**
Uses the camera in your area. When the currently set area differs from your home area, you must make the Area Setting.

**Destination:**
Uses the camera set to the time at your destination. Set the destination area.

**Changing Area Setting**
Setting a frequently visited destination lets you easily adjust the time when you visit that destination.

1. Select the area part for [Destination], then press .

2. Press  on the control button to select the desired area, then select Summer Time using  .

### Notes on use

4-888-060-11(1)
Digital Still Camera
DSC-H400

Date & Time Setting

Sets date and time again.

1. MENU - (Settings) - (Clock Settings) - [Date & Time Setting] - desired mode -

2. Set the numeric value and desired setting with ▲ / ▼ / ◀ / ▶ on the control button.

3. [OK] -

**Date & Time Format:**
You can select the date and time display format.

**Summer Time:**
You can select Summer Time [On]/[Off].

**Date & Time:**
You can set date and time.

PlayMemories Home

**Below are examples of functions available when you use PlayMemories Home.**

- You can import images recorded on the camera to a computer.
- You can play back images stored on the computer and the camera.
- You can share images using the PlayMemories Online.

**Below are examples of functions available when you use Windows.**

- You can display images stored on a computer by shooting date in a calendar display.
- You can edit still images, such as resizing (Resize) and cropping (Trimming).
- You can upload images to a network service. (An internet connection environment is required.)
- For other details, refer to the Help of PlayMemories Home.

**Notes on use**

Music Transfer

Music Transfer allows you to replace Music files provided in the camera at the factory with your favorite tracks, and to delete and add Music files. You can also restore tracks stored at the factory to your camera.

Download the software from the following URL and install it on your computer.

Windows: http://www.sony.co.jp/imsoft/Win/
Mac: http://www.sony.co.jp/imsoft/Mac/

- The following track types can be imported using Music Transfer.
  - MP3 files stored on the hard disk of your computer
  - Music CD tracks
  - Preset-music saved on the camera
- Before starting up Music Transfer, perform MENU - (Settings) - (Main Settings) - [Download Music], and connect the camera to the computer.
  For other details, see the help in Music Transfer.
Installing PlayMemories Home

1. Using the Internet browser on your computer, go to the following URL, then install PlayMemories Home.
   
   www.sony.net/pm/

   - Follow the instructions on the screen to complete the installation.
   - When the installation is completed, PlayMemories Home will start.
   - If the software PMB (Picture Motion Browser) has already been installed on your computer, it will be overwritten by PlayMemories Home during the installation. Use PlayMemories Home the successor software of PMB.

2. Connect the camera to your computer using the dedicated USB cable (supplied) (A).
   
   - Some new functions may be added to the PlayMemories Home. Even if PlayMemories Home is already installed, connect the camera to your computer.

   ![Diagram showing USB connection]

   **A**: To a USB jack of the computer  
   **B**: To the USB A/V OUT terminal

**Note**

- Log on as Administrator.
- It may be necessary to restart your computer. When the restart confirmation message appears, restart the computer following the instructions on the screen.
- DirectX may be installed depending on your computer’s system environment.
Software for Mac

For details on software for Mac, access the following URL:
http://www.sony.co.jp/imsoft/Mac/

**Note**

- The available software varies depending on the area.
Connecting the camera to the computer

1. Insert the fully charged battery in the camera.
2. Power on the camera and the computer.
3. Connect the camera to your computer using the dedicated USB cable (supplied) (A).

**Note**
- When connecting the camera to a computer using the dedicated USB cable, power feeding from the computer starts if [USB Power Supply] is set to [On]. ([On] is the default setting.)

**Related Topic**

- USB Connect Setting
- LUN Setting

Importing images to a computer

PlayMemories Home allows you to easily import images. For details on PlayMemories Home functions, see the PlayMemories Home Help Guide.

**Importing images to a Windows computer without using PlayMemories Home**

When the AutoPlay Wizard appears after making a USB connection between the camera and a computer, click [Open folder to view files] - [OK] - [DCIM] or [MP_ROOT] copy the desired images to the computer.

**Note**
- If the Device Stage screen appears with Windows 7 or Windows 8, double-click [Browse Files] - media icon - folder in which the image you want to import is stored.

**Importing images to a Mac computer without using PlayMemories Home**

Connect the camera to your Mac computer. Double-click the newly recognized icon on the desktop - the folder in which the image you want to import is stored. Then drag and drop the image file on to the hard disk icon.

**Note**
- Set MENU - ≡ (Settings) - ⤧ (Main Settings) - [USB Connect Setting] to [Mass Storage].

**Notes on use**

4-488-060-11(1)

Digital Still Camera
DSC-H400

Disconnecting the camera from the computer

Disconnects the camera from the computer.
Perform procedures from step 1 to 2 below before performing the following operations:

- Disconnecting the cable.
- Removing a memory card.
- Turning off the camera.

1. Click \(\text{disconnect icon}\) on the task tray, then click \(\text{disconnect icon}\).
   - For Windows Vista, click \(\text{disconnect icon}\) on the task tray.

2. Click the confirmation message displayed on the screen.

**Note**

- Drag and drop the icon of the memory card or the drive icon to the "Trash" icon beforehand when you use a Mac computer, and the camera is disconnected from the computer.
- The disconnect icon may not appear when you use a Windows 7, Windows 8 computer. In this case, you can disconnect the camera from the computer without following the above steps.
Precautions

**Internal memory and memory card back up**
- Do not turn off the camera, remove the battery pack, or remove the memory card while the access lamp is lit. Otherwise, the internal memory data or the memory card may be damaged. Be sure to make a backup copy to protect your data.

**On database files**
When you insert a memory card without a database file into the camera and turn on the power, part of the memory card capacity is used to automatically create a database file. It may take some time until you can perform the next operation. If a database file error occurs, import all the images to a computer using PlayMemories Home, then format the memory card.

**Do not use/store the camera in the following places**
- In an extremely hot, cold or humid place
  - In places such as in a car parked in the sun, the camera body may become deformed and this may cause a malfunction.
- Storing under direct sunlight and near a heater
  - The camera body may become discolored or deformed, and this may cause a malfunction.
- In a location subject to rocking vibration
- Near strongly magnetic place
- In sandy or dusty places
  - Be careful not to let sand or dust get into the camera. This may cause the camera to malfunction, and in some cases this malfunction cannot be repaired.

**On operating temperature**
Your camera is designed for use under the temperatures between 0°C and 40°C (32°F and 104°F). Shooting in extremely cold or hot places that exceed this range is not recommended.

**On moisture condensation**
- If the camera is brought directly from a cold to a warm location, moisture may condense inside or outside the camera. This moisture condensation may cause a malfunction of the camera.
- If moisture condensation occurs, turn off the camera and wait about an hour for the moisture to evaporate. Note that if you attempt to shoot with moisture remaining inside the lens, you will be unable to record clear images.

**On image data compatibility**
- The camera conforms with DCF (Design rule for Camera File system) universal standards established by JEITA
Sony does not guarantee that the camera will play back images recorded or edited with other equipment, or that other equipment will play back images recorded with the camera.

**Notes on the screen and lens**

- The screen is manufactured using extremely high-precision technology so over 99.99% of the pixels are operational for effective use. However, some tiny black and/or bright dots (white, red, blue or green) may appear on the screen. These dots are a normal result of the manufacturing process and do not affect the recording.
- Exposing the screen or lens to direct sunlight for long periods may cause malfunctions. Be careful when placing the camera near a window or outdoors.
- Do not press against the screen. The screen may be discolored and that may cause a malfunction.
- Images may trail across on the screen in a cold location. This is not a malfunction.

**Note on disposal/transfer of the camera**

To protect personal data, perform the following when disposing of or transferring the camera.

- Reset all camera settings by performing MENU - (Settings) - (Main Settings) - [Initialize].
Backup of various settings, date and time

The rechargeable backup battery is continually charged as long as you are using the camera. However, if you use the camera for only short periods, it discharges gradually, and if you do not use the camera at all for about 3 months it becomes completely discharged. In this case, be sure to charge the rechargeable backup battery before using the camera. However, even if the rechargeable backup battery is not charged, you can still use the camera, but the date and time will not be indicated.

If the settings are reset every time the battery is charged, the internal rechargeable backup battery may be exhausted. Contact your dealer or local authorized service facility.

**Charging method of the internal rechargeable backup battery**

Insert a charged battery in the camera, or connect the camera to a wall outlet (wall socket) using the AC adapter (supplied) and leave the camera for 24 hours or more while the power of the camera is turned off.

---

**Notes on use**

4-488-060-11(1)

Copyright 2014 Sony Corporation
Battery pack

**On charging the battery pack**
- Charge the battery pack (supplied) before using the camera for the first time.
- You can charge the battery pack even if it is not completely discharged. In addition, even if the battery pack is not fully charged, you can use the partially charged capacity of the battery pack as is.
- We recommend charging the battery pack in an ambient temperature of between 10°C to 30°C (50°F to 86°F). The battery pack may not be effectively charged in temperatures outside this range.

**Effective use of the battery pack**
- Battery performance decreases in low temperature surroundings. So in cold places, the operational time of the battery pack is shorter. We recommend the following to ensure longer battery pack use:
  - Put the battery pack in a pocket close to your body to warm it up, and insert it in the camera immediately before you start shooting. (If there are any metal objects such as keys in your pocket, be aware of short-circuits.)
  - The battery pack will run out quickly if you use flash or zoom frequently.
  - We recommend having spare battery packs handy for two times or three times the expected shooting time, and making trial shots before taking the actual shots.
  - Do not expose the battery pack to water. The battery pack is not water-resistant.
  - Do not leave the battery pack in extremely hot places, such as in a car or under direct sunlight.
  - You may not be able to turn on the camera or the battery pack may not be effectively charged if the terminal section of the battery is dirty. In this case, wipe any dust off lightly using a soft cloth or a cotton swab to clean the battery.

**Remaining battery charge**
- A remaining charge indicator appears on the screen.
- It takes about 1 minute until the correct remaining charge indicator appears.
- The remaining charge indicator may not be correct under certain circumstances.
- If you do not operate the camera for a certain period of time while the power is on, the camera turns off automatically. (Auto power-off function)
- If the battery remaining charge is not displayed, change the DISP (Display Setting).

**How to store the battery pack**
- Fully discharge the battery pack before storing and store the camera in a cool, dry place. To maintain the battery
pack's function, charge the battery pack and then fully discharge it in the camera at least once a year while storing.

- To use the battery pack up, leave the camera in slideshow playback mode until the power goes off.
- To prevent staining the terminal, short-circuiting, etc., be sure to use a plastic bag, etc. to keep away from metal materials when carrying or storing.

**On battery life**

- Battery life is limited. Battery capacity decreases over time and through repeated use. If the available time of the battery is shortened significantly, it is probably time to replace it with a new one.
- Battery life varies according to how it is stored and operating conditions and environment in which each battery pack is used.

**Compatible battery pack**

The NP-BX1 (supplied) can be used with this model.

---

**Notes on use**

4-488-060-11(1)

Copyright 2014 Sony Corporation
Notes on charging the battery pack

- The supplied AC Adaptor is dedicated to this camera. Do not connect with other electronic devices. Doing so may cause a malfunction. Also, make sure to use a genuine Sony AC Adaptor.

- If the Charge lamp of the camera flashes during charging, remove the battery pack being charged, and then insert the same battery pack into the camera securely again. If the Charge lamp flashes again, this may indicate a battery error or that a battery pack other than the specified type has been inserted. Check that the battery pack is the specified type. If the battery pack is the specified type, remove the battery pack, replace it with a new or different one and check that the battery is charged correctly. If the battery is charged correctly, a battery error may have occurred.

- If the Charge lamp flashes even if the AC Adaptor is connected to the camera and the wall outlet (wall socket), this indicates that charging has stopped temporarily and is on standby. Charging stops and enters standby status automatically when the temperature is outside of the recommended operating temperature. When the temperature returns to the appropriate range, charging resumes and the Charge lamp lights up again. We recommend charging the battery pack in an ambient temperature of between 10°C to 30°C (50°F to 86°F).

- Using the supplied AC Adaptor, you can charge the battery pack inserted in the camera. In addition, power supply via AC Adaptor in playback mode is also available. However, in shooting mode, power supply via AC Adaptor is not available. You need AC Adaptor AC-UD10 (sold separately) or AC-UD11 (*) (sold separately) to supply power from a wall outlet (wall socket) while shooting.

* The AC Adaptor AC-UD11 (sold separately) may not be available in some countries/regions.
Memory card

Memory card can be used in the camera is listed below.

**Memory Stick PRO Duo media:**
(Memory Stick XC-HG Duo media/Memory Stick PRO Duo media/Memory Stick PRO-HG Duo media)

**Memory Stick Micro media:**
(Memory Stick Micro (M2) media/Memory Stick Micro (Mark2) media)

**SD memory card:**
(SD memory card/SDHC memory card/SDXC memory card)

**microSD memory card:**
(microSD memory card/microSDHC memory card/microSDXC memory card)

- Memory Stick PRO Duo media of up to 64 GB and SD memory cards of up to 64 GB have been tested and proven to operate with your camera.
- Memory Stick Micro media of up to 16 GB and microSD memory cards of up to 64 GB have been tested and proven to operate with your camera.
- When recording movies, it is recommended that you use the following memory cards:

  - **Memory Stick PRO Duo** (Mark2) (Memory Stick PRO Duo (Mark2) media)
  - **Memory Stick XC-HG Duo** (Memory Stick XC-HG Duo media)
  - **Memory Stick PRO-HG Duo** (Memory Stick PRO-HG Duo media)
  - **Memory Stick Micro** (Mark2) (Memory Stick Micro (Mark2) media)
  - SD card (Class 4 or faster), microSD memory card (Class 4 or faster)

**Note**

- To ensure stable operation of the memory card, we recommend that you use this camera to format any memory card being used with this camera for the first time. Note that formatting will erase all data recorded on the memory card. This data cannot be restored. Be sure to back up any important data to a PC or other storage location.
- If you repeatedly record/delete images over a long period of time, fragmentation of data may occur on the memory card and movies may not be recorded properly. In such a case, save your images to a computer or other storage location, then [Format].
- A memory card formatted with a computer is not guaranteed to operate with the camera.
- Data read/write speeds differ depending on the combination of the memory card and the equipment used.
- We recommend backing up important data.
- Do not attach a label on the memory card itself nor on a memory card adaptor.
- Do not touch the terminal section of the memory card with your hand or a metal object.
• Do not strike, bend or drop the memory card.
• Do not disassemble or modify the memory card.
• Do not expose the memory card to water.
• Do not leave the memory card within the reach of small children. They might accidentally swallow it.
• Be aware that the memory card will be hot immediately after it has been used for a long time.
• Insert a memory card that fits the memory card slot size. Otherwise, it will cause a malfunction.
• Do not use or store the memory card under the following conditions:
  _ High temperature locations such as the hot interior of a car parked in direct sunlight
  _ Locations exposed to direct sunlight
  _ Humid locations or locations with corrosive substances present
• Images recorded in Memory Stick XC-HG Duo media, SDXC memory cards, or micro SDXC memory cards cannot be transferred or played back on computers or AV devices that are not exFAT-compatible, even when the camera is connected to the computer or AV device using a USB cable. Before connecting, make sure that the device is exFAT-compatible. If connected to a device that is not exFAT-compatible, a format drive request may appear. Do not format the drive, or all data will be lost. (exFAT is the file system used by Memory Stick XC-HG Duo media, SDXC memory cards and microSDXC memory cards.)

**Note on using the memory card adaptor (sold separately)**

• When inserting a memory card into a memory card adaptor, make sure the memory card is inserted facing in the correct direction, then insert it all the way in. Incorrect insertion may result in a malfunction.
• When using Memory Stick Micro media or a microSD memory card, be sure to insert into the dedicated memory card adaptor.

**Memory Stick media**

The types of Memory Stick media that can be used with the camera are listed below. However, proper operation cannot be guaranteed for all Memory Stick media functions.

• Memory Stick PRO Duo media: *1*2*3
• Memory Stick PRO-HG Duo media: *1*2
• Memory Stick XC-HG Duo media: *1*2
• Memory Stick Micro (M2) media: *1
• Memory Stick Micro (Mark2) media: *1

*1 Memory Stick Duo media, MagicGate Memory Stick Duo media, Memory Stick PRO Duo media, Memory Stick PRO-HG Duo media and Memory Stick Micro media are equipped with MagicGate functions. MagicGate is copyright protection technology that uses encryption technology. Data recording/playback that requires MagicGate functions cannot be performed with the camera.
*2 High-speed data transfer using a parallel interface is supported.
*3 [1280x720] size movies can be recorded.

**Notes on using Memory Stick Micro media (sold separately)**

• This product is compatible with Memory Stick Micro media (M2). M2 is an abbreviation for Memory Stick Micro media.
• To use a Memory Stick Micro media with the camera, be sure to insert the Memory Stick Micro media into an M2 Adaptor as large as of Duo size. If you insert a Memory Stick Micro media into the camera without an M2 Adaptor as large as of Duo size, you might not be able to remove it from the camera.
• Do not leave the Memory Stick Micro media within the reach of small children. They might accidentally swallow it.
Digital Still Camera
DSC-H400

On cleaning

**Cleaning the lens and flash**
Wipe the lens and flash with a soft cloth to remove fingerprints, dust, etc.

**Cleaning the lens**
- Do not use any cleaners that contain organic solvents such as benzine or thinner.
- When you need to clean the lens surface, remove dust with a blower (commercially available).
- If the camera is very dirty, moisten a soft cloth or lens tissue with the lens cleaner and wipe the lens gently in a circular motion from the center. Do not spray the lens cleaner onto the lens surface directly.

**Cleaning the flash**
Clean the flash surface before use. The heat of the flash emission may cause dirt on the flash surface to start smoking or burning. Wipe the flash surface with a soft cloth to remove dirt or dust, etc.

**Cleaning the camera surface**
Clean the camera surface with a soft cloth slightly moistened with water, then wipe the surface with a dry cloth. To prevent damage to the finish or casing:
- Do not expose the camera to chemical products such as thinner, benzine, alcohol, disposable cloths, insect repellent, sunscreen or insecticide.
- Do not touch the camera with any of the above on your hand.
- Do not leave the camera in contact with rubber or vinyl for a long time.

Recordable time of movies

The table below shows the approximate maximum recording times. These are the total times for all movie files. Recordable time may vary depending on shooting conditions and the memory card.

(h (hour), m (minute), s (second))

<table>
<thead>
<tr>
<th>Resolution</th>
<th>Internal memory 55 MB:</th>
<th>2 GB:</th>
<th>4 GB:</th>
<th>8 GB:</th>
<th>16 GB:</th>
<th>32 GB:</th>
<th>64 GB:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1280x720(Fine)</td>
<td>Internal memory 55 MB:</td>
<td>-</td>
<td>-</td>
<td>25 m (15 m)</td>
<td>50 m (30 m)</td>
<td>1 h 45 m (1 h 15 m)</td>
<td>3 h 40 m (2 h 35 m)</td>
</tr>
<tr>
<td>1280x720(Standard)</td>
<td>Internal memory 55 MB:</td>
<td>-</td>
<td>-</td>
<td>35 m (30 m)</td>
<td>1 h 10 m (1 h)</td>
<td>2 h 20 m (2 h)</td>
<td>4 h 40 m (4 h 5 m)</td>
</tr>
<tr>
<td>VGA</td>
<td>Internal memory 55 MB:</td>
<td>2 m (1 m 30 s)</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

The number in ( ) is the minimum recordable time.

Continuous shooting is possible for approximately 29 minutes (a product specification limit). The maximum continuous recording time of [1280x720(Fine)] movie is about 15 minutes (limited by the 2 GB file size restriction).
The recordable time of movies varies because the camera is equipped with VBR (Variable Bit Rate), which automatically adjusts image quality depending on the shooting scene. When you record a fast-moving subject, the image is clearer but the recordable time is shorter because more memory is required for recording. Recordable time also varies depending on shooting conditions, subject or image quality/size settings. You cannot record movies to internal memory when the movie image size is [1280x720(Fine)] or [1280x720(Standard)].
Using the camera abroad

You can use the AC Adaptor (supplied) in any country or region where the power supply is within 100 V to 240 V AC, 50 Hz/60 Hz.

**Note**

- An electronic voltage transformer is unnecessary and its use may cause a malfunction.
Digital Still Camera
DSC-H400

On TV color systems

To view movies shot using this camera on a television, the camera and television must use the same color television system.

**NTSC system**
Bahama Islands, Bolivia, Canada, Central America, Chile, Colombia, Ecuador, Jamaica, Japan, Korea, Mexico, Peru, Surinam, Taiwan, the Philippines, the U.S.A., Venezuela, etc.

**PAL system**
Australia, Austria, Belgium, China, Croatia, Czech Republic, Denmark, Finland, Germany, Holland, Hong Kong, Hungary, Indonesia, Italy, Kuwait, Malaysia, New Zealand, Norway, Poland, Portugal, Romania, Singapore, Slovak Republic, Spain, Sweden, Switzerland, Thailand, Turkey, United Kingdom, Viet Nam, etc.

**PAL-M system**
Brazil

**PAL-N system**
Argentina, Paraguay, Uruguay

**SECAM system**
Bulgaria, France, Greece, Guiana, Iran, Iraq, Monaco, Russia, Ukraine, etc.

Cannot turn on the camera

- After inserting the battery pack into the camera, it may take a few moments for the camera to power up.
- Make sure that the battery pack is inserted correctly.
- The battery pack will discharge by itself even if you do not use it. Charge the battery pack before use.
- Check that the battery pack type is compatible.

Notes on use

Digital Still Camera
DSC-H400

Power turns off suddenly

- Depending on the camera and battery temperature, the power may turn off automatically to protect the camera. In this case, a message is displayed on the screen before the power turns off.
- If you do not operate the camera for a certain period of time while the power is on and [Power Save] is set to [Standard] or [Max], the camera turns off automatically to prevent wearing down the battery pack. Turn on the camera again.

Digital Still Camera
DSC-H400

Remaining charge indicator is incorrect

- This is caused when you use the camera in an extremely hot or cold location.
- Battery capacity decreases over time and through repeated use. If decreased usage time between charges becomes significant, it is probably time to replace it with a new one.

Notes on use

4-488-060-11(1)

Charge lamp of the camera flashes while charging the battery

- Check that the battery pack type is compatible.
- The Charge lamp of the camera flashes infrequently when you use a battery pack that has not been used for a long time. In such cases, remove the battery pack from the camera and re-insert it.
- For details, see "Battery pack".

Notes on use

4-488-060-11(1)
Copyright 2014 Sony Corporation
Battery is not charged even if the Charge lamp turns off and charging is finished

- This happens when you charge the battery pack in an extremely hot or cold location. Charge the battery pack within the proper charging temperature range of between 10°C to 30°C (50°F to 86°F).
Digital Still Camera
DSC-H400

Cannot record images

- Check the free capacity of internal memory or memory card. If it is full, do one of the following:
  - Delete unnecessary images.
  - Change the memory card.
- You cannot record images while charging the flash.

Messages

- The battery level is low. Charge the battery pack immediately. Depending on the conditions of use or the type of battery pack, the indicator may flash even though there are still 5 minutes to 10 minutes of remaining battery time left.

**System error. Turn on the device again.**
- Turn the power off and then on again.

**Internal memory error**
- Turn the power off and then on again.

**Reinsert the memory card that you were using.**
- The inserted memory card cannot be used in the camera.
- The terminal section of the memory card is dirty.
- The memory card is damaged.

**Incompatible type of memory card.**
- The inserted memory card cannot be used in the camera.

**Buffer overflow. Writing to the media was not completed in time.**
- If you use a memory card that has been recorded and erased repeatedly, or that was formatted on a different camera, the data writing speed may be too slow. First back up any data on the card to a computer, and then reformat the card before using it.
- The writing speed of the memory card you are using is not sufficient for movie recordings. Use one of the memory cards listed below.
  - Memory Stick PRO Duo (Mark2) media, Memory Stick PRO-HG Duo media, Memory Stick media. Memory Stick XC-HG Duo media or Memory Stick Micro (Mark2) media.
  - SD memory card, SDHC memory card, SDXC memory card, microSD memory card or microSDHC memory card (Class 4 or faster).

**Cannot recognize the internal memory. Format and use again.**

**Cannot recognize this memory card. Format and use again.**
- Format the media again.

**The memory card is locked. Check the tab.**
- You are using the memory card with the write-protect switch, and the switch is set to the LOCK position. Set the
switch to the recording position.

**This is a read-only memory card.**
- The camera cannot record or delete images on this memory card.

**No images**
- No images that can be played back have been recorded in internal memory.
- No images that can be played back have been recorded in this folder of the memory card.

**No still images**
- The selected folder or date does not contain a file that can be played back in a slideshow.

**File found which was not recognized**
- You tried to delete a folder containing a file that cannot be played on this camera. Delete the file on a computer and then delete the folder.

**Folder error. Cannot record to the selected folder. Please select a different folder.**
- A folder with the same first three digit number already exists on the memory card (for example: 123MSDCF and 123ABCDE). Select another folder, or create a new folder.

**Cannot create more folders**
- A folder with a name beginning with "999" exists on the memory card. You cannot create any folders if this is the case.

**Folder protected**
- You tried to delete a folder that is protected as read-only on a computer.

**Cannot display file**
- An error occurred while the image was playing back. No guarantees are made for playing back, on this camera, files containing images which were processed on a computer or images which were shot using other cameras.

**Read only folder**
- You have selected a folder that cannot be set as a recording folder on the camera. Select another folder.

**File protected**
- Release the protection.

**Image size over limit**
- You are playing back an image with size that cannot be played back on the camera.

**Unable to detect face for retouch**
- You may not be able to retouch the image depending on the image.

**(Vibration warning indicator)**
- Camera shake may occur due to insufficient light. Use flash, turn on the anti-blur function, or mount the camera on a tripod to secure the camera.
1280x720 (Fine) is not supported with this memory card.
1280x720 (Standard) is not supported with this memory card.

- For recording movies, it is recommended that you use a memory card of 1 GB or larger.

**Turn the power off and on again**

- The lens malfunction.

**Maximum number of images already selected.**

- Up to 100 files can be selected when using [Multiple Images].
- You can add DPOF (Print order) marks to up to 999 files.

**Error Playing Music**

- Delete the Music file, or replace it with a normal Music file.
- Execute [Empty Music], then download a new Music file.

**Error Formatting Music**

- Execute [Empty Music].

**Operation cannot be executed in Easy Viewing mode.**

- Processing and other editing functions of the camera cannot be performed on image files that have been processed using a computer or images that were recorded with other cameras.

**Error**

- The number of images exceeds that for which date management in a database file by the camera is possible. To register additional images in the Image Database File, delete images in [Date View].

**Error**

- It is not possible to record to the camera's Image Database File or play back using [Date View]. Use PlayMemories Home to back up all images to a computer and use it to restore the memory card.

**Image Database File error Cannot recover**

- Import all images to the computer using PlayMemories Home, and format the memory card.
- To view the images again with the camera, export the imported images to the camera with PlayMemories Home.

**Recording function unavailable due to high internal temperature.**

- The camera temperature has risen. You cannot record images until the temperature has gone down.

**Recording has stopped due to increased camera temperature.**

- Recording has stopped due to a rise in temperature while recording a movie. Please wait until the temperature goes down.

- When you record movies for a long time, the camera temperature rises. In this case, stop recording movies.
