How to use this User Guide

▼ Selecting a topic to display
▼ Searching a topic by keyword
▼ Returning to a previous page
▼ Printing out a page
▼ Marks and notations used in this User Guide

This User Guide explains how to use each function of the camera, how to change settings, and how to troubleshoot a problem.
The images used as examples in this User Guide are reproduced images, and are not actual images shot using this camera.

Selecting a topic to display

The following illustrations take Internet Explorer 7 as an example.

1. Click a title in the side bar on the left of the browser window.
   The title’s topic list appears in the right pane.

2. Click a topic title in the list.

Descriptions appear in the right pane.
Changing the font size
Change the font size by changing the setting of your web browser. For how to change the font size setting, refer to the Help of your web browser.

Searching a topic by keyword
Enter the keyword in the search window, then click the [Search] button.

Returning to a previous page
Use the browser's back button to return to a previously viewed page, or use the breadcrumb trail navigation (A) to display the desired page.

Printing out a page
Click the [Print] button to print out a page you are viewing.
Marks and notations used in this User Guide

In this User Guide, the sequence of operations is shown by arrows (→) (A). Operate the camera in the order indicated.

- Icons in the operating procedure sentences appear when the camera is in its default settings.
- The default setting is indicated by ✔.
- ❍ indicates information that is useful to know.
The illustrations used in this User Guide

Illustrations used in this User Guide are of the DSC-WX100 unless noted otherwise.

Using the wrist strap

Attach the strap and place your hand through the loop to prevent the camera from damage by being dropped.
Using the control wheel

- Moving the selection frame on MENU screen, etc.
- Selecting an image to be played back
- Selecting a REC mode

The following functions are located on the up/down/right/left side of the control wheel: DISP (Display Setting), (Flash), (Self-Timer) and (Cont. Shooting Settings).
Press the control wheel toward each icon to enter the setup screen for each function.

Turn the control wheel or press the up/down/right/left side of the wheel following the screen to move the selection frame.
Press in the center of the control wheel to set the selected item.

Moving the selection frame on MENU screen, etc.

Turn the control wheel or press the up/down/right/left side of the wheel to move the selection frame. In some modes, you can also move the selection frame by turning the control wheel.

Selecting an image to be played back

Press the right or left side of the control wheel, or turn the wheel to play back the next/previous image.

Selecting a REC mode
Turn the control wheel to display the REC mode selection screen. Keep turning the control wheel until the desired mode is selected. The available modes differ depending on the position of the mode switch.

- You can also change the REC mode from [MENU].
Using the internal memory

On image data stored in the internal memory
The camera has approximately 19 MB of internal memory. This memory is not removable. You can record still images on the internal memory when there is no memory card inserted in the camera.

When a memory card is inserted
[Recording]: Images are recorded on the memory card.
[Playback]: Images on the memory card are played back.
[Menu, Settings, etc.]: Various functions can be performed on images on the memory card.

When there is no memory card inserted
[Recording]: Images are recorded using the internal memory. However, movies cannot be recorded to the internal memory.
[Playback]: Images stored in the internal memory are played back.
[Menu, Settings, etc.]: Various functions can be performed on images in the internal memory.

Notes
- You cannot transfer image data on a memory card to the internal memory.
- By making a USB connection between the camera and a computer with a micro USB cable, you can transfer data stored in the internal memory to a computer. However you cannot transfer data on a computer to the internal memory.
In-Camera Guide

This camera contains an internal function guide. This allows you to search the camera's functions according to your needs. You can use the selected function after reading the guide.

1. Press the MENU button.
2. Select the desired MENU item using ▲ / ▼ on the control wheel.
3. Press the ❑ (In-Camera Guide) button. The operation guide for the MENU item you have selected in step 2 is displayed.
4. Use ▲ / ▼ to switch among summary, operation and details screens.
   - When [Use this function] is displayed on the screen, select it to switch to that mode.
   - If you press the ❑ (In-Camera Guide) button when the MENU screen is not displayed, you can search the guide using keywords or icons.
5. Press the ❑ (In-Camera Guide) button to exit the guide.

Notes
- ❑ (In-Camera Guide) button is not available in Easy Mode.
- [Use this function] may not be available, depending on the selected functions.
- Depending on the selected functions, the operation guide and details may not be displayed.
Shooting still images

1. Set the mode switch to (Still Image), then press the ON/OFF (Power) button.

![ON/OFF]

2. Hold the camera steady as illustrated.

![Camera steady]

3. Press the shutter button halfway down to focus.
   When the image is in focus, a beep sounds and the \( \bullet \) indicator lights.

![Focus indicator]

- The shortest shooting distance is approximately 5 cm (2 inches) (W), 1.5 m (4 ft 11 1/8 inches) (T) (from the lens).

4. Press the shutter button fully down.
   - Do not put your fingers on the flash or lens when shooting.

![Shutter button]

**If you shoot a still image of a subject that is difficult to focus on**

- When the camera cannot focus on the subject automatically, the AE/AF lock indicator changes to slowly flashing and the beep does not sound. Either recompose the shot or change the focus setting. [Details]
Focusing may be difficult in the following situations:
- It is dark and the subject is distant.
- The contrast between the subject and the background is poor.
- The subject is seen through glass.
- The subject is moving quickly.
- There is reflective light or shiny surfaces.
- The subject is backlit or there is a flashing light.

Related Topic

Viewing still images
Still Image Size/Panorama Image Size
Zoom (Still images)

Available zoom

Zoom scale

Enlarges images with the W/T (zoom) lever when shooting. The camera's optical zoom function can enlarge images up to 10×. Optical zoom allows you to enlarge an image without deteriorating its original quality.

1. Set the camera to shooting mode.
2. Slide the W/T (zoom) lever.
   Slide the lever to the T side to zoom in, or to the W side to zoom out.

Note

- Zoom is locked to the W side for shooting in the following situations:
  - In [iSweep Panorama]
  - In [3D Sweep Panorama]
  - In [Sweep Multi Angle]

Available zoom

You can combine certain zoom settings to zoom in at high magnification. The icon on the screen changes in accordance with the zoom you use.

1. Zoom with the original image quality
   (You can shoot still images without deteriorating the original image quality even if the optical zoom scale exceeds 10× magnification.)

2. [Clear Image Zoom]:
   Zoom with close to the original image quality [Details]

3. [Digital Zoom]:
   Less than the original image quality [Details]

<td>102×</td>
<td></td>
</tr>
</tbody>
</table>

*1 The maximum zoom scale is the total zoom magnification that can be achieved when zoom scale without deterioration (including 10× optical zoom), [Clear Image Zoom] and [Digital Zoom] are used in combination. The maximum zoom scale varies depending on the settings. The maximum zoom scale for the default setting is the same as when [Clear Image Zoom] is [On]. [Details]

*2 When [Still Image Size] is set to [VGA], [Digital Zoom] is limited; the maximum zoom scale is 153×.

### Notes

- The default setting for [Clear Image Zoom] is [On].
- The default setting for [Digital Zoom] is [Off]. Set [Digital Zoom] to [On] to enlarge images even with deterioration. [Details]
- The default setting for [Still Image Size] is [18M]. To change the zoom scale, change [Still Image Size]. [Details]
- Zoom functions other than the optical zoom are not available when shooting in the following situations:
  - In [iSweep Panorama]
  - In [Picture Effect]
  - In [Background Defocus]
  - When the Smile Shutter function is activated.
  - When [Self-Timer] is set to [Self-portrait One Person] or [Self-portrait Two People].
  - When [Backlight Correction HDR] mode is selected in Scene Selection.
  - The Face Detection function does not operate when you use other than the optical zoom.
Shooting movies

1. Set the mode switch to (Movie), then press the ON/OFF (Power) button.

2. Press the MOVIE (Movie) button to start recording.

3. Press the MOVIE button again to stop recording.

MOVIE (Movie) button
You can start recording a movie by pressing the MOVIE button, regardless of the position of the mode switch.

Notes
- The sound of the lens and lever operating will be recorded when the zoom function operates while shooting a movie. The sound of the MOVIE button operating may also be recorded when you press the MOVIE button to stop recording.
- Continuous shooting is possible for approximately 29 minutes at one time at the camera’s default settings and when the temperature is approximately 25°C (77°F). When movie recording is finished, you can restart recording by pressing the MOVIE button again. Recording may stop to protect the camera depending on the ambient temperature.

Related Topic

**Notes**

- [Clear Image Zoom] is not available while recording movies.
- The camera zooms slowly while recording movies.
Shooting still images while recording a movie (Dual Rec)

You can shoot still images while recording a movie. The camera keeps recording the movie even if you shoot still images.

Up to 10 still images can be shot during one movie recording.

1. Press the MOVIE (Movie) button to start recording a movie.

2. Press the shutter button.
   A still image is recorded.
   - The number of recordable still images (A) appears on the screen when you press the shutter button halfway down.

3. Press the MOVIE button to stop recording the movie.
   After recording movies, the recorded still images are displayed in frames on the screen.

Notes
- The sound of the shutter button operating may be recorded.
- Flash is not available for shooting still images during movie recording.
- The size of a still image that can be shot while recording a movie varies depending on the movie size. For details, see “Still Image Size(Dual Rec).” [Details]
- When the Smile Shutter function is set to [On], the shutter releases automatically each time the camera detects a smiling face. You cannot switch [On] or [Off] for Smile Shutter during movie recording.
- When the mode switch is set to (Movie) and the camera is on [Standby], you cannot use [Smile Shutter].
- If the memory card capacity is insufficient or 10 images have been shot, 📷 appears on the screen. This icon indicates that no more still images can be shot.
Shooting panoramic images

Allows you to create a panoramic image from composite images. The camera also automatically detects people’s faces or moving subjects.

1. Set the mode switch to (Sweep Panorama), then press the ON/OFF (Power) button.

2. Select a shooting direction using the ▲ / ▼ / ◀ / ▶ (up/down/right/left side) of the control wheel.

3. Align the camera with the end of the subject to be shot and press the shutter button fully.

A: This part will not be recorded.

4. Pan the camera to the end of the guide (B), following the indication on the screen.
Tips for shooting a panorama image

Pan the camera in an arc at a constant velocity in the direction indicated on the screen. Subjects at rest are more suited for panorama shots than moving subjects.

Radius as short as possible.

First, press the shutter button halfway so that you can lock the focus, exposure and white balance. Then, press the shutter button fully down and pan or tilt the camera.

If a section with greatly varied shapes or scenery is concentrated along a screen edge, the image composition may fail. In such case, adjust the frame composition so that the section is in the center of the image, then shoot again.

Notes

- If you cannot pan the camera across the entire subject within the given time, a gray area occurs in the composite image. If this happens, move the camera faster to record a full panorama image.
- Since several images are stitched together, the stitched part will not be recorded smoothly.
- When the whole angle of panoramic shooting and the AE/AF locked angle are very different in brightness, color and focus, the shooting will not be successful. If this happens, change AE/AF locked angle and shoot again.
- You cannot create panorama images in the following situations:
  - You pan the camera too quickly or too slowly.
  - There is too much camera shake.

Shooting with the 3D Sweep Panorama function

Multiple images are shot while the camera is moving, and these images are compiled into a 3D image. The recorded image can be played back on a 3D TV.

1. Set the mode switch to (Sweep Panorama).
2. Turn the control wheel to select (3D Sweep Panorama). [Details]
3. Select a shooting direction with the control wheel.
4. Align the camera with the end of the subject to be shot and press the shutter button.

A: This part will not be recorded.
5. Pan the camera to the end of the guide (B), following the indication on the screen.

Tips for shooting in 3D Sweep Panorama mode

With your body as the axis, sweep the camera in a small circle, paralleling the direction of the arrow on the screen. (Aim for a 5-second semicircle.)
If you are sweeping too quickly or too slowly, a message will be displayed on the screen.
We recommend that you practice it several times before shooting.
Subjects at rest are best suited for 3D shots.
Determine the scene and press the shutter button halfway, so that you can lock the focus, exposure and white balance. Then, press the shutter button fully down and pan the camera.

**Notes**

- 3D images are played back as standard still images on this camera.
- 3D shooting is not suitable for the following situations:
  - When there is a large subject
  - Moving subjects
  - When the main subject is too close to the camera
  - Images with little contrast, such as the sky, a sandy beach, or lawn
- 3D images consist of a JPEG file and an MPO file. If either file is deleted on your PC, the camera may not operate correctly.
- If you cannot pan the camera across the entire subject within the given time, a gray area occurs in the composite image. If this happens, move the camera faster to record a full 3D image.
- Since several images are stitched together, the stitched part will not be recorded smoothly.
- Under low light conditions, the images may be blurred. It is recommended that you shoot images in bright outside light.
- If the entire angle of view of the 3D shot and the angle of view when the AE/AF was locked are extremely different in brightness, color or focus, the shot will not be successful. If this happens, change the location of the AE/AF lock and try again.
- 3D shooting may be canceled in the following situations:
  - You pan the camera too quickly or too slowly.
  - There is too much camera shake.

Shooting with the Sweep Multi Angle function

As you sweep the camera, the camera shoots multiple images, then compiles them into one stereoscopic image. It shoots an image that can be played back as a stereoscopic image by tilting the camera to the right or left, and an image that can be played back on a 3D TV.

1. Set the mode switch to (Sweep Panorama).
2. Turn the control wheel to select (Sweep Multi Angle). [Details]
3. Align the camera with the end of the subject to be shot and press the shutter button.

A: This part will not be recorded.

4. Pan the camera to the end of the guide (B), following the indication on the screen.

Shootable range in Sweep Multi Angle mode

Sweep the camera approximately 30 degrees to the left and right of the subject you want to focus on. Refer also to the tips for 3D Sweep Panorama. [Details]

Notes

- In [Sweep Multi Angle] mode, you can select only the [16:9(2M)] panorama image size.
3D images consist of a JPEG file and an MPO file. If either file is deleted on your PC, the camera may not operate correctly.

Intelligent Auto

On Scene Recognition

Features of Auto shooting modes

Allows you to shoot still images with the setting adjusted automatically.

1. Set the mode switch to  (Still Image).
2. Turn the control wheel to select  (Intelligent Auto). [Details]
3. Shoot with the shutter button.

On Scene Recognition

Scene Recognition operates in Intelligent Auto mode. This function lets the camera automatically recognize the shooting conditions and shoot the image.

Features of Auto shooting modes

In Superior Auto mode, the camera shoots a higher-quality image than in Intelligent Auto mode. The camera also shoots multiple images based on the recognized scene, then creates a composite of the multiple images (Overlay shooting).

Program Auto mode allows you to change various shooting settings, such as the white balance or ISO settings.

<table>

</tbody>
</table>
|  (Superior Auto) | • Use when you shoot images under difficult conditions, such as low light or backlit scenes.  
• Use when you want to shoot a higher-quality image than in (Intelligent Auto) mode. | Continuous shooting, Smile Shutter |
| P (Program Auto) | Use when you want to shoot using customized shooting settings with the exposure (both the shutter speed and the aperture value) adjusted automatically. | Scene Recognition |
Notes

- In [Intelligent Auto] mode, you may be unable to shoot low light or backlit scenes clearly.
- In [Superior Auto] mode, it takes some time to record an image, because the camera overlays the images.

Related Topic

Scene Recognition

Functions not available in some REC modes

MENU items not available in some REC modes
Superior Auto

The camera combines Scene Recognition and high-quality image technology to automatically shoot the images with the optimal settings.

1. Set the mode switch to 📷 (Still Image).
2. Turn the control wheel to select 🤖 (Superior Auto). [Details]
3. Shoot with the shutter button.
   The camera shoots burst images when needed and overlays the multiple images. By overlaying the images, the camera records an image with less subject blur and noises.

What is the difference between Superior Auto mode and Intelligent Auto mode?
In Superior Auto mode, the camera shoots burst images based on the recognized scene, then creates a composite of the burst images (Overlay shooting).

The camera automatically corrects the backlight and reduces the noise by overlaying images, so a higher-quality image results than in Intelligent Auto mode.

A : Scene Recognition
- Night Scene
- Night Portrait
- Backlight
- Backlight Portrait
- Landscape
- Macro
- Portrait
- Infant
- Spotlight
- Low Light
- Tripod
- Move

B : Overlaying processing
- Hand-held Twilight
- Anti Motion Blur
Backlight Correction HDR

- The camera automatically selects an overlaying mode based on the recognized scene, and the (overlay) appears on the screen.

Notes
- When the camera overlays the images, it takes more time to record an image.
- In low light conditions such as night scenes, set [Flash] to [Off] to achieve the optimal effect of the overlaid images.

3D Still Image

Shooting a 3D image. Images recorded using the 3D functions can be played back stereoscopically on a 3D TV.

1. Set the mode switch to Still Image.

2. Turn the control wheel to select (3D Still Image). [Details]

3. Shoot with the shutter button.

Tips for various 3D shooting

In addition to [3D Still Image], this camera also includes other modes for creating stereoscopic images, such as [3D Sweep Panorama] and [Sweep Multi Angle].

Tips for shooting 3D images

Approach a subject with the subject and background far apart, as shown in the illustration. The 3D effect may not work effectively when the scene is too dark, the subject is moving or you moved the camera after setting the AE/AF lock.

If you shoot the image in a dark place, noise may be highly visible.

Notes

- Available image sizes are [18M] and [16:9(13M)].
- The 3D images are played back as standard still images on this camera.
- 3D images consist of a JPEG file and an MPO file. If either file is deleted on your PC, the camera may not operate correctly.

Background Defocus

Allows you to shoot an image with image processing so that the background and the subject stands out.

1. Set the mode switch to 📸(Still Image).
2. Turn the control wheel to select 🎯 (Background Defocus). [Details]
3. Shoot with the shutter button.

Tips for adjusting the intensity of the background defocus

• Before shooting, select MENU → [Defocus Effect] → [High], [Mid] or [Low] to change the intensity of the background defocus effect.

Tips for defocusing the background

Position of the subject and the background

If you shoot an image with the subject and background far apart, as shown in the illustration, the background can be defocused. Shoot from the recommended shooting distance indicated on the screen.

Subject is sufficiently removed from the background

Subject and background are too close
**Zoom scale and position of the subject**

When you shoot a flower and a small item from close up, turn the W/T (zoom) lever to the W side. For shooting people, move a short distance away from the subject and turn the W/T (zoom) lever to the T side.

- To lock the focus on the subject more easily, use the Tracking focus function of the camera.

**Notes**

- When shooting, hold the camera still to reduce camera shake.
- If you are unable to defocus effectively, try the following steps:
  - Turn the W/T (zoom) lever to the T side.
  - Approach the subject until you are within the recommended shooting distance.
  - Separate the subject and the background.
  - Shoot after focusing on the subject.

Tracking focus

The camera tracks the subject and adjusts the focus automatically even if when the subject is moving.

1. Press ● on the control wheel.
   The target frame appears.

2. Place the target frame over the subject you want to focus on, and press ●.
   Tracking begins.

3. Press the shutter button to shoot the image.

4. To cancel the tracking focus before shooting, press ● again.

Tracking a face

If you use the tracking focus function while the Face Detection function is activated, you can select a face to be given priority and register that face with the camera. Even if the registered face disappears from the screen, when it shows up on the screen again, the camera focuses on the registered face.

- When a specified face is registered in the camera memory and you use the Smile Shutter function, the camera searches only for that face’s smile.

Notes

- When you use zoom functions other than optical zoom, the tracking focus function is not available.
- Tracking focus will automatically be canceled when the subject disappears from the screen or has failed to be tracked. However, if the target of the tracking focus is a specified face, the camera keeps tracking on that face even if the face disappears from the screen.

Histogram

A histogram is a graph showing the brightness of an image. The graph display indicates a bright image when skewed to the right side (A), and a dark image when skewed to the left side (B).

1. Press DISP (Display Setting) on the control wheel, then select [Detailed Info].
Notes

- The histogram also appears when playing back a single image, but you cannot adjust the exposure.
- The histogram does not appear when:
  - Recording/playing back movies
  - Viewing vertical orientation images
  - Rotating still images
  - Shooting/viewing in [iSweep Panorama]
  - When [Display Cont. Shooting Group] is set to [Display Main Image Only]
- A large difference in the histogram displayed during shooting and playback may occur when:
  - The flash strobes.
  - The shutter speed is slow or fast.
- The histogram may not appear for images recorded using other cameras.
Flash

1. Press \((\text{Flash})\) on the control wheel.
2. Select the desired mode with the control wheel.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AUTO (Auto)</td>
<td>Flash automatically operates in dark locations or when there is backlight.</td>
</tr>
<tr>
<td>(On)</td>
<td>Flash always operates.</td>
</tr>
<tr>
<td>SL (Slow Synchro)</td>
<td>Flash always operates. The shutter speed is slow in a dark place to clearly shoot the background that is out of flash light.</td>
</tr>
<tr>
<td>(Off)</td>
<td>Flash does not operate.</td>
</tr>
</tbody>
</table>

💡 When the “White circular spots” appears in flash photos
This is caused by particles (dust, pollen, etc.) floating close to the lens. When they are accentuated by the camera’s flash, they appear as white circular spots.

How can the “White circular spots” be reduced?
- Light the room and shoot the subject without a flash.
- Select (Anti Motion Blur) or ISO (High Sensitivity) mode in Scene Selection. ([Off] is automatically selected.)

Notes
- The flash strobes twice. The first flash adjusts the light quantity.
- While charging the flash, \(\text{\large \[\text{\textbullet} \text{\textbullet}\]}\) is displayed.
- You cannot use the flash during burst shooting.
- When shooting with the flash and the zoom is set to W, the shadow of the lens may appear on the screen, depending on the shooting conditions. If this happens, set the zoom to T and shoot with the flash again.

Functions not available in some REC modes
Cont. Shooting Settings

You can select Single (single-image) or Burst as the shooting mode.

1. Press (Cont. Shooting Settings) on the control wheel.
2. Select the desired mode with the control wheel.

<table>
<thead>
<tr>
<th>(Single Shooting)</th>
<th>The camera shoots a single image.</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Continuous Shooting)</td>
<td>The camera shoots up to 10 continuous frames in one burst when you hold down the shutter button.</td>
</tr>
</tbody>
</table>

**Notes**
- [Flash] is set to [Off].
- When recording with the self-timer, a series of up to 10 images is recorded.
- [Focus], [White Balance], and [EV] are adjusted for the first image, and these settings are also used for the other images.
- When the battery level is low, or when the internal memory or a memory card is full, the burst stops.
- [VGA] image size will be set while recording on internal memory.

**Related Topic**

Self-Timer

**Automatic shooting with Self-portrait timer**

1. Press (Self-Timer) on the control wheel.
2. Select the desired mode with the control wheel.

<table>
<thead>
<tr>
<th>😊</th>
<th>Off (Off)</th>
<th>Does not use the self-timer.</th>
</tr>
</thead>
<tbody>
<tr>
<td>.Logging</td>
<td>10sec</td>
<td>Sets the self-timer to a 10-second delay. When you press the shutter button, the self-timer lamp flashes and a beep sounds until the shutter operates. To cancel, press again.</td>
</tr>
<tr>
<td>.Logging</td>
<td>2sec</td>
<td>Sets the self-timer to a 2-second delay.</td>
</tr>
<tr>
<td>Logging</td>
<td>Self-portrait One Person</td>
<td>Sets the self-timer to Self-portrait timer. When the camera detects the specified number of faces, a beep sounds, and the shutter operates 2 seconds later.</td>
</tr>
<tr>
<td>Logging</td>
<td>Self-portrait Two People</td>
<td></td>
</tr>
</tbody>
</table>

**Tips for preventing blur**

If your hands or body moves while holding the camera and pressing the shutter button, “Camera shake” occurs. Camera shake occurs frequently under low-light or slow shutter speed conditions, such as those encountered in (Night Portrait) or (Night Scene) mode.

To reduce camera shake, set the self-timer to a 2-second delay and brace your arms against your sides after pressing the shutter button.

**Automatic shooting with Self-portrait timer**

Point the lens at yourself so that the selected number of faces are reflected in the screen. The shutter operates automatically. Do not move your camera after the beep sounds.

- You can also shoot an image by pressing the shutter button during this operation.

Viewing still images

1. Press the (Playback) button to switch to playback mode.
2. Select an image with the control wheel.

Viewing images taken with a different camera
This camera creates an Image Database File on the memory card for recording and playing images. If the camera detects images not registered in the Image Database File on the memory card, a registration screen with the message “Files found which were not recognized Import files” will be displayed. To view unregistered images, register them by selecting [OK].

- Use a sufficiently charged battery to register images. If a battery with a low charge is used to register images, it may not be possible to register all of the data or the data may be corrupted if the battery charge runs out.
Playback zoom

Enlarges the image being played back.

1. Press (Playback) button to switch to playback mode.
2. Turn the W/T (zoom) lever to T side ( conservatism) during still image playback.
3. Adjust the position using ▲ / ▼ / ◀ / ◀ on the control wheel.
   The frame in the lower left of the image shows which part of the total image is being displayed.

4. Change the zoom scale with the W/T (zoom) lever.
   Turn the W/T (zoom) lever to T side ( conservatism) to zoom in, W side ( conservatism) to zoom out.
   Press ◀ on the control wheel to cancel playback zoom.

To save enlarged images

You can save an enlarged image by using the trimming function.
Press MENU → [Retouch] → [Trimming (Resize)].
**Image Index**

- **Displaying images of the desired date/folder**
- **Viewing images with the Calendar**

Displays multiple images at the same time.

1. Press the (Playback) button to switch to playback mode.
2. Turn the W/T (zoom) lever to the W side ( ) to display the image index screen.
   - Turn the lever again to display an index screen with more images.
3. To return to the single-image screen, select an image with the control wheel, then press .

### Displaying images of the desired date/folder

Select the left side bar with the control wheel, then select the desired date range or folder using ▲ / ▼.

### Viewing images with the Calendar

When [View Mode] is set to [Date View] and the screen display is in index mode, turn the W/T (zoom) lever to W side ( ) to view images with the Calendar.

▲ / ▼ / ◀ / ◁ : Moves the selection frame to a different date.

Displays the calendar of the next/previous month.

- To select the month you want to display, select ▲/▼ with the control wheel, then the desired month.
- To view images in selected date in index mode, select the date with the control wheel and press .
- To cancel the calendar display and return to an index screen, select × using the control wheel,
then press .
Delete button

Allows you to select unwanted images for deletion.
You can also delete images from the MENU button. [Details]

1. Press the 
   (Playback) button to switch to playback mode.
2. 
   (Delete) button → desired mode →  on the control wheel
3. Press [OK] →  

<table>
<thead>
<tr>

Still Image Size/Panorama Image Size

- Image size when shooting still images
- 3D Still Image Size
- Image size in Easy Mode
- Image size when shooting Sweep Panorama

The image size determines the size of the image file that is recorded when you take an image. The larger the image size, the more detail will be reproduced when the image is printed on large-format paper. The smaller the image size, the more images can be recorded.

### Image size when shooting still images

1. **MENU** → [Still Image Size] → desired size

<table>
<thead>
<tr>
<th>Image size (Horizontal × Vertical)</th>
<th>Usage guidelines</th>

**Image size when shooting Sweep Panorama**

1. MENU → (Panorama Image Size) → desired size

<table>
<thead>
<tr>
<th>Size</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2M (16:9) (Horizontal: 1920 × 1080)</td>
<td>[16:9] is available only for 3D shooting.</td>
</tr>
<tr>
<td>STD (Standard) (Horizontal: 4912 × 1080) (Vertical: 3424 × 1920)</td>
<td>Shoots images using standard size.</td>
</tr>
<tr>
<td>WIDE (Wide) (Horizontal: 7152 × 1080) (Vertical: 4912 × 1920)</td>
<td>Shoots images using wide size.</td>
</tr>
<tr>
<td>HR (High Resolution) (Horizontal: 10480 × 4096)</td>
<td>Shoots high-resolution panorama in 43 megapixel size.</td>
</tr>
</tbody>
</table>

**Note**
● If you cannot print panoramic images recorded in [High Resolution] size due to the large size, use the resize function in the software "PlayMemories Home". "PlayMemories Home" allows you to resize panoramic images recorded in [High Resolution] to 50%, etc.
Movie Quality/Movie Size

The larger the size of the movie image, the higher the image quality. The higher the amount of data used per second (average bit-rate), the higher the image quality.

Select a movie recording format by pressing MENU → (Settings) → (Shooting Settings) → [Movie format] in shooting mode. [Details]

If [Movie format] is [AVCHD], select the movie size from [Movie Quality], and if [Movie format] is [MP4], select from [Movie Size].

Movie quality (recording format: AVCHD)

1. MENU → [Movie Quality] → desired mode

Movies shot with this camera are recorded in AVCHD format, at approximately 60 fields/sec (for 1080 60i-compatible devices) or 50 fields/sec (for 1080 50i-compatible devices), in interlaced mode, with Dolby Digital audio, AVCHD format.

<table>
<thead>
<tr>
<th>Movie quality</th>
<th>Average bit-rate</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AVC HD 24M (FX)</td>
<td>24 Mbps</td>
<td>Shoots at the highest picture quality of 1920×1080 (50i/60i) size</td>
</tr>
<tr>
<td>AVC HD 17M (FH)</td>
<td>17 Mbps</td>
<td>Shoots at a high picture quality of 1920×1080 (50i/60i) size</td>
</tr>
<tr>
<td>AVC HD 9M (HQ)</td>
<td>9 Mbps</td>
<td>Shoots at a standard picture quality of 1440×1080 (50i/60i) size</td>
</tr>
</tbody>
</table>

Movie image size (recording format: MP4)

1. MENU → [Movie Size] → desired size

Movies shot with this camera are recorded in MPEG-4 format, at approximately 30 frames/sec (for 1080 60i-compatible devices) or approximately 25 frames/sec (for 1080 50i-compatible devices), in progressive mode, with AAC audio, mp4 format.

<table>
<thead>
<tr>
<th>Movie image size</th>
<th>Average bit-rate</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MP4 12M</td>
<td>12 Mbps</td>
<td>Shoots at 1440×1080 size</td>
</tr>
<tr>
<td>MP4 6M</td>
<td>6 Mbps</td>
<td>Shoots at 1280×720 size</td>
</tr>
<tr>
<td>MP4 3M</td>
<td>3 Mbps</td>
<td>Shoots at VGA size</td>
</tr>
</tbody>
</table>

Notes

- A telephoto image is produced when [MP4 3M] image size is selected.
- When you create AVCHD discs from movies recorded in [AVC HD 24M (FX)], it will take time as the image quality must be converted. To save [AVC HD 24M (FX)] movies without converting the image quality, use Blu-ray discs.

</table>

- When the image shot is overexposed, adjust [EV] to the minus side.
- When the image shot is underexposed, adjust [EV] to the plus side.

### Note

- If you shoot a subject in extremely bright or dark conditions, or when you use the flash, the exposure adjustment may not be effective.

### Related Topic

MENU items not available in some REC modes
ISO

Adjusts the luminous sensitivity when the camera is set to Program Auto or [Underwater] is selected in Scene Selection. In movie mode, [ISO] is fixed to [Auto]. You cannot change the settings.

1. MENU ➔ ISO (ISO) ➔ desired mode

<table>
<thead>
<tr>
<th>ISO AUTO (Auto)</th>
<th>Sets the ISO sensitivity automatically.</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 100/200/400/800/1600 3200/6400/12800</td>
<td>You can reduce image blurring in dark locations or with moving subjects by increasing the ISO sensitivity (select a larger number). Higher ISO settings than [ISO6400] are achieved using Clear Image technology and overlay burst shooting.</td>
</tr>
</tbody>
</table>

Adjusting ISO Sensitivity (Recommended Exposure Index)

ISO sensitivity is a speed rating for recording media that incorporates an image sensor that receives light. Even when the exposure is the same, images differ depending on the ISO sensitivity.

High ISO sensitivity

Records a bright image even in dark locations while increasing shutter speed to reduce blur. However, the image tends to become noisy.

Low ISO sensitivity

Records a smoother image. However, when the exposure is insufficient, the image may become darker.

Note

- When [ISO] is set to [ISO6400] or [ISO12800], it takes some time to record an image, because the camera overlays the image. The flash does not operate with these settings.

<tr>
<td>One Push</td>
<td>Adjusts the white balance depending on the light source. Use this mode when [Auto] and other settings don’t provide accurate colors.</td>
</tr>
<tr>
<td>One Push Set</td>
<td>Memorizes the basic white color which will be used in [One Push] mode.</td>
</tr>
</tbody>
</table>

**Effects of lighting conditions**

The apparent color of the subject is affected by the lighting conditions.

The color tones are adjusted automatically, but you can adjust color tones manually using the White Balance function.

Daylight (White as Standard)

Cloudy (Bluish)
Notes
- When shooting with a flash in other than [Flash] mode, [White Balance] is set to [Auto].
- When [Flash] is [On] or [Slow Synchro], the white balance can only be adjusted to [Auto], [Flash], [One Push] or [One Push Set].
- [One Push Set] cannot be selected while charging the flash.

To capture the basic white color in [One Push Set] mode
1. Frame a white object such as a piece of paper filling the screen under the same lighting conditions as you will shoot the subject.
2. MENU → WB (White Balance) → [One Push Set] → ◀ on the control wheel
   The screen momentarily turns black, and when the white balance has been adjusted and stored in the memory, the recording screen is displayed again.

Notes
- If the  indicator flashes while shooting, the white balance is either not set or cannot be set. Use automatic white balance.
- Do not shake or strike the camera while [One Push Set] is in progress.
- When flash mode is set to [On] or [Slow Synchro], the white balance is adjusted to the condition with the flash emitting.

Focus

Focus on subjects near the edge of the screen
You can change the focus method. Use the menu when it is difficult to get the proper focus in auto focus mode.

AF stands for “Auto Focus,” a function that adjusts the focus automatically.
The selected AF range finder frame appears on the screen.

1. **MENU → ✉️ (Focus) → desired mode**

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>✉️ (Multi AF)</td>
<td>Focuses on a subject in all ranges of the finder frame automatically. When you press the shutter button halfway down in still image shooting mode, a green frame is displayed around the area that is in focus.</td>
</tr>
<tr>
<td>🎥 (Center AF)</td>
<td>Focuses on a subject in the center of the finder frame automatically. Using the AF lock function together, you can compose the image the way you want.</td>
</tr>
<tr>
<td>🌟 (Spot AF)</td>
<td>Focuses on an extremely small subject or a narrow area automatically. Using the AF lock function together, you can compose the image the way you want.</td>
</tr>
</tbody>
</table>

**Notes**
- When you use the following functions, the AF range finder frame is disabled and appears in a dotted line. In this case, the camera works to focus on the subjects at the center of the screen.
  - When the Face Detection function is active, AF operates with priority on faces.
  - When Scene Selection is set to 🎥 (Underwater), focus operation is adjusted to underwater shooting. When focus is achieved by half pressing the shutter button, a large frame is displayed in green.
  - Hold the camera steady so as not to misalign the subject and the AF range finder frame.
Zoom functions other than optical zoom
- AF illuminator

- If Tracking focus is activated, the camera focuses with priority on the subject to be tracked.

### Focusing on subjects near the edge of the screen

If the subject is out of focus, do as follows:

1. Recompose the shot so that the subject is centered in the AF range finder (A), and press the shutter button halfway to focus on the subject (AF lock).
2. When the AE/AF lock indicator (B) stops flashing and remains on, return to the fully composed shot, and press the shutter button fully down.
   - As long as you do not press the shutter button fully down, you can retry the procedure as many times as necessary.

Scene Recognition

Advanced mode

The camera automatically detects shooting conditions, and then takes the shot. When a motion is detected, the ISO sensitivity is increased according to the movement to reduce subject blur. When the camera is set to Intelligent Auto mode, you can select [Advanced] mode, in which the camera automatically shoots two images.

In Scene Recognition, the position of an icon displayed on the screen is different depending on the circumstances. It depends on whether the camera recognizes a scene or condition. If the camera recognizes a scene, icons and guides such as (Portrait), (Infant), (Night Portrait), (Night Scene), (Backlight Portrait), (Backlight), (Landscape), (Macro), (Spotlight) or (Low Light) are displayed on the first line. If the camera recognizes a condition, icons such as (Tripod) or (Move) are displayed on the second line. The camera may recognize both the scene and condition, or just one.

1. MENU ➔ SCN (Scene Recognition) ➔ desired mode

<table>
<thead>
<tr>
<th>SCN (Auto)</th>
<th>When the camera recognizes the scene, it switches to the optimal settings and shoots the image.</th>
</tr>
</thead>
</table>
| SCN+ (Advanced) | When the camera recognizes the scene, it switches to the optimal settings. When the camera recognizes (Night Scene), (Night Portrait), (Backlight) or (Backlight Portrait), it automatically changes the setting and shoots another image.  
- When you shoot two images consecutively, the + mark on the SCN+ icon will turn green.  
- When two frames are shot, the two images are displayed side by side immediately after shooting.  
- When [Anti Blink] is displayed, 2 images are taken automatically and the image with the eyes open is selected automatically. [Details] |

Notes

- Scene Recognition function does not operate when you use zoom functions other than the optical zoom.
- The available flash settings are [Auto] and [Off].
- These scenes may not be recognized depending on the situation.
- In Tracking focus mode, (Portrait), (Infant), (Night Portrait) or (Backlight Portrait) are not recognized.
- If the environment causes vibrations to be transferred to the camera when (Tripod) and (Night Scene) condition are recognized at the same time, (Tripod) conditions may not be recognized.
- Sometimes a slow shutter results when (Tripod) and (Night Scene) condition are recognized at the same time. Keep the camera still during shooting.
When shooting movies, Advanced mode is not available.

**Advanced mode**

In [Advanced] mode, the camera shoots two images consecutively with the different settings as follows when it recognizes (Night Scene), (Night Portrait), (Backlight) or (Backlight Portrait) scenes, which tend to blur or when (Night Scene) and (Tripod) conditions are recognized at the same time. You can select the desired image from the two images shot.

<table>
<thead>
<tr>
<th>First Image*</th>
<th>Second Image</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Night Scene]</td>
<td>Shoots in Slow Synchro Shoots with sensitivity increased and shake reduced</td>
</tr>
<tr>
<td>![Night Portrait]</td>
<td>Shoots in Slow Synchro with the face which the flash strobes on as guide Shoots with sensitivity increased with the face as guide and shake reduced</td>
</tr>
<tr>
<td>![Backlight]</td>
<td>Shoots in Slow Synchro Shoots with a slower shutter speed without increasing sensitivity</td>
</tr>
<tr>
<td>![Backlight Portrait]</td>
<td>Shoots with the flash Shoots with the brightness and contrast of the background adjusted</td>
</tr>
<tr>
<td>![Face]</td>
<td>Shoots with the face which the flash strobes on as guide Shoots with the brightness and contrast of the face and the background adjusted</td>
</tr>
</tbody>
</table>

* When [Flash] is set to [Auto].

**What is the Anti Blink function?**

When set to [Advanced], the camera automatically shoots two images consecutively* when it recognizes (Portrait) or (Infant). The camera will select, display, and record the image which the eyes are not blinked automatically. If the eyes are closed in both images, the message "Blinked eye detected" is displayed.

* except when the flash strobes/when the shutter speed is slow.

Smile Shutter

When the camera detects a smile, the shutter is released automatically.

1. MENU → 😊(Smile Shutter) → [On]
2. Wait for a smile to be detected.
   When a smile is detected and the smile level exceeds the point on the indicator, the camera records images automatically.
   - If you press the shutter button during Smile Shutter, the camera shoots the image, and then returns to Smile Shutter mode.

<table>
<thead>
<tr>
<th>🧘‍♂️on (On)</th>
<th>Uses the [Smile Shutter] function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>🧘‍♂️off (Off)</td>
<td>Does not use the [Smile Shutter] function.</td>
</tr>
</tbody>
</table>

💡 Tips for better capturing of smiles

1. Do not cover the eyes with the bangs. Do not obscure the face by hat, masks, sunglasses, etc.
2. Try to orient the face in front of the camera and be as level as possible. Keep the eyes narrowed.
3. Give a clear smile with an open mouth. The smile is easier to detect when the teeth are shown.

- The shutter operates when any person whose face is being detected smiles.
- You can select or register the priority subject for face detection with [Face Detection]. When the
selected face is registered in the camera memory, Smile Detection is performed only for that face.

**Details**
- If a smile is not detected, select MENU → [Smile Detection Sensitivity], then set the value to [Slight Smile].

**Notes**
- Shooting using the Smile Shutter ends automatically when either the memory card or internal memory becomes full.
- Smiles may not be detected correctly depending on the conditions.
- The Smile Shutter function does not operate when you use other than the optical zoom.

Using MENU items (Viewing)

You can select the various viewing functions easily from the MENU button.

1. Press the (Playback) button to switch to playback mode.

2. Press the MENU button to display the Menu screen.

3. Select the desired menu item with ▲ / ▼ on the control wheel.

4. Select the desired item with ◀ / ▶ on the control wheel or by turning the control wheel.

5. Press ◇ in the center of the control wheel to execute the function.
### Easy Mode

When viewing still images in Easy Mode, the playback screen text becomes larger, and indicators become easier to see.

1. Press the (Playback) button to switch to playback mode.
2. MENU → **EASY** (Easy Mode) → [OK] →  on the control wheel
   - To end Easy Mode, MENU → [Exit Easy Mode].

### Notes
- The battery charge is used up more quickly because the screen brightness increases automatically.
- The shooting mode also changes to [Easy Mode].

### Viewing functions available in Easy Mode

In Easy Mode, only the deletion function is available.

<table>
<thead>
<tr>
<th>(Delete) button</th>
<th>You can delete the currently displayed image. Select [OK] → .</th>
</tr>
</thead>
<tbody>
<tr>
<td>MENU button</td>
<td>You can delete the currently displayed image with [1 image], and delete all images in the selected date range or internal memory (if selected) with [All]. Select [Exit Easy Mode] → [OK] to exit Easy Mode.</td>
</tr>
</tbody>
</table>

**Note**
- When a memory card is inserted in the camera, [View Mode] is set to [Date View].

Copyright 2012 Sony Corporation
**Slideshow**

**Continuous Playback**
- Images are automatically played back in succession.

1. Press the 
(Playback) button to switch to playback mode.
2. MENU → (Slideshow) → desired slideshow →  on the control wheel

**Slideshow with music**
- Starts playback from the currently displayed image.
- Plays back still images in succession along with effects and music.

**Notes**
- [Slideshow] is not available when [View Mode] is set to [Folder view (MP4)] or [AVCHD view].

### Continuous Playback
1. Select the desired image for playing with the control wheel.
2. MENU → (Slideshow) → [Continuous Playback] → 
3. To change the playback method, follow the guide on the bottom of the screen.

### Control wheel
<table>
<thead>

Send by TransferJet

Receiving images using TransferJet

Using separately sold TransferJet-compatible devices

TransferJet is a close-up, wireless transfer technology that allows data to be transferred by closely aligning two products that you want to communicate with each other.

To find out whether your camera is equipped with the TransferJet function, check for the (TransferJet) mark on the bottom of the camera.

Using a Memory Stick with TransferJet (sold separately) allows images to be transferred between TransferJet-compatible devices.

For more details on TransferJet, see the operating instructions supplied with Memory Stick with TransferJet.

1. Insert a Memory Stick with TransferJet into the camera.
2. Press the (Playback) button to switch to playback mode.
3. MENU  (Send by TransferJet) desired mode  on the control wheel
4. Transfer images by closely aligning the (TransferJet) marks on the camera and other device.

A notification sound is emitted when connection is made.

| (This Image) | Sends the currently displayed image in single-image mode. |
| (Multiple Images) | You can select and send multiple images. |
| | 1. After step 3, select an image to be sent, then press . |
| | To cancel the selection, press again to cancel the mark. |
| | 2. MENU  [OK]  |

Notes

- Only still images can be transferred.
- Up to 10 images can be transferred at once. However, for 3D images, both the MPO file and the JPEG file are transferred. Depending on the receiving device, up to 20 images are received.
- Set [TransferJet] to [On] in (Settings). [Details]
- On an airplane, set [TransferJet] to [Off] in (Settings) [Details]. In addition, follow the rules of the place where you use.
- The connection is cut if transfer cannot be made within about 30 seconds. If this happens, select [Yes] and realign the two (TransferJet) marks on the camera and another device.
- The Memory Stick with TransferJet and camera models with TransferJet are not sold in some countries and regions due to local laws and regulations.
- Set the [TransferJet] function to [Off] in countries and regions other than where you purchased your camera. Depending on the country or region, if you use the TransferJet function, you may be liable due to local restrictions on transmission of electromagnetic waves.

Receiving images using TransferJet

1. Press the (Playback) button to switch to playback mode.
2. Closely align the (TransferJet) marks on the camera and sending device to receive images.

A notification sound is emitted when connection is made.
**Tips for sending and receiving data successfully**

Closely align the (TransferJet) mark on the camera and other device.

- The transfer rate and range differ depending on the angle at which the (TransferJet) marks are aligned.
- It may be necessary to alter the position/angle of the camera until communication can be obtained.
- Sending and receiving data is easier if the (TransferJet) marks are aligned with both cameras parallel to each other as shown in the figure.

**Notes**

- Only images that can be played back on the camera can be sent or received.
- This camera can receive only JPEG and MPO files.
- If an Image Database File error occurs during saving, a Recover Image Database File screen will appear.
- Play images that cannot be registered in the Image Database File using [Folder view (Still)].

**Using separately sold TransferJet-compatible devices**

Using separately sold TransferJet-compatible devices allows you to transfer images to a PC and can broaden your enjoyment of transferring data.

For details, see the operating instructions supplied with your TransferJet-compatible device.

- Note the following points when using TransferJet-compatible devices.
  - Before use, set the camera to playback mode.
  - If no image is displayed, press MENU → (Settings) → (Main Settings) → [LUN Setting] → [Single].
  - While connected, data cannot be written to or deleted from the camera.
  - Do not disconnect while importing images to “PlayMemories Home”.

Delete button
### Retouch

Retouches a recorded image and saves it as a new file.

The original image is retained.

1. Press the \( \text{Playback} \) button to switch to playback mode.
2. \( \text{MENU} \rightarrow \text{Retouch} \rightarrow \text{desired mode} \rightarrow \bullet \) on the control wheel
3. Perform retouching according to the operation method in each mode.

#### (Trimming (Resize))

<table>
<thead>
<tr>
<th>Steps</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Turn the W/T (zoom) lever to the T ( \text{Q} ) side to zoom in, and to the W side to zoom out.</td>
</tr>
<tr>
<td>2</td>
<td>Set the zoom point using ( \uparrow/ \downarrow/\leftarrow/\rightarrow ) on the control wheel.</td>
</tr>
<tr>
<td>3</td>
<td>( \text{MENU} \rightarrow \text{select an image size to save} \rightarrow \bullet )</td>
</tr>
</tbody>
</table>
| 4     | \( \text{[OK]} \rightarrow \bullet \)  
  * The quality of trimmed images may deteriorate.  
  * The image size that you can trim may vary depending on the image. |

#### (Red Eye Correction)

Select [OK] with the control wheel \( \rightarrow \bullet \).

* You may not be able to correct the red-eye phenomenon depending on the image.

#### (Unsharp masking)

Sharpens the image within a chosen frame.
Select the area (frame) of the desired image to retouch using ▲ / ▼ / ◄ / ► on the control wheel → MENU.

2 [OK] → ●
- Depending on the image, sufficient correction may not be applied and the image quality may deteriorate.

**Note**
- You cannot retouch the following images:
  - Panoramic images
  - 3D images
  - Movies
  - Images displayed in a burst group
Picture Effect

Retouches a recorded image so that it looks like a watercolor or illustration, and saves it as a new file. The original image is retained.

1. Press the (Playback) button to switch to playback mode.

2. MENU → (Picture Effect) → desired mode → on the control wheel

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Watercolor</td>
<td>Adds ink bleed and gradational effects to images as if they were painted using watercolors.</td>
</tr>
<tr>
<td>Illustration</td>
<td>Adds illustration-like effects to images by emphasizing the contours, etc.</td>
</tr>
</tbody>
</table>
3D Viewing

Select [3D Viewing] when you want to play back images shot in 3D mode on the 3D TV. Connect the camera and the 3D TV using an HDMI Cable (sold separately).

1. Press the " (Playback) button to switch to playback mode.
2. MENU →  (3D Viewing) →  on the control wheel

Related Topic

Viewing 3D images on a 3D TV
**View Mode**

**Displaying the Calendar**

- **Viewing images taken with a different camera**

Allows you to select the display format for images.

1. Press the (Playback) button to switch to playback mode.
2. MENU → (View Mode) → desired mode → on the control wheel

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date View</td>
<td>Displays images by date.</td>
</tr>
<tr>
<td>Folder view (Still)</td>
<td>Displays still images.</td>
</tr>
<tr>
<td>Folder view (MP4)</td>
<td>Displays MP4-format movies.</td>
</tr>
<tr>
<td>AVCHD view</td>
<td>Displays AVCHD-format movies.</td>
</tr>
</tbody>
</table>

**Note**

- When the internal memory is used to record images, View Mode is set to Folder View.

---

**Displaying the Calendar**

1. MENU → (View Mode) → [Date View] → on the control wheel
2. Turn the W/T (zoom) lever to W side repeatedly until the Calendar is displayed.
   - Use the control wheel to select ↑↓ and press ← to view images of the selected date in index mode.

**Viewing images taken with a different camera**

This camera creates an Image Database File on the memory card for recording and playing images. If the camera detects images not registered in the Image Database File on the memory card, a registration screen with the message “Files found which were not recognized Import files” will be displayed.

To view unregistered images, register them by selecting [OK].

- Use a sufficiently charged battery to register images. If a battery with a low charge is used to register images, it may not be possible to transfer all of the data or the data may be corrupted if the battery charge runs out.
Display Cont. Shooting Group

You can select to display burst images in groups or display all images during playback.

1. Press the (Playback) button to switch to playback mode.
2. MENU → (View Mode) → [Date View] → on the control wheel
3. MENU → (Display Cont. Shooting Group) → desired mode →

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Display Main Image Only)</td>
<td>Groups burst images, then plays back the main image only. When Face Detection is performed in burst mode, the camera determines and displays the optimum image as the main image. When Face Detection is not performed, the first image in the burst group is displayed as the main image.</td>
</tr>
<tr>
<td>(Display All)</td>
<td>Plays back all burst images one at a time.</td>
</tr>
</tbody>
</table>

Related Topic

Viewing burst images

Copyright 2012 Sony Corporation
Protect

Protects recorded images against accidental erasure. The \( \Box \) mark is displayed for registered images.

1. Press the (Playback) button to switch to playback mode.
2. MENU \( \Box \) (Protect) \( \Box \) desired mode \( \Box \) on the control wheel
3. [OK] \( \Box \)

**Note**

- When the internal memory is used to record images, View Mode is set to Folder View.

<table>
<thead>
<tr>
<th>Protect Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \Box ) (This Image)</td>
<td>Protects the currently displayed image in single-image mode.</td>
</tr>
</tbody>
</table>
| \( \Box \) (Multiple Images) | You can select and protect multiple images.  
1. After step 2, select an image to be protected, then press \( \Box \).  
To cancel the selection, press \( \Box \) again to cancel the \( \Box \) mark.  
2. MENU \( \Box \) [OK] \( \Box \) |
| \( \Box \) (Set All Cont. Shooting Imgs.) | Protect all images in the selected burst group at once in Display Cont. Shooting Group mode. |
| \( \Box \) (Rmv. All Cnt. Shoot. Images.) | Release all protected images in the selected burst group at once in Display Cont. Shooting Group mode. |

**To cancel the protection**

Select the image for which you want to cancel protection, and unlock it by pressing \( \Box \) on the control wheel as the same procedure to protect it. The \( \Box \) indicator disappears, and the protection is released.
Print (DPOF)

DPOF (Digital Print Order Format) is a function that allows you to specify the images of the memory card that you want to print out later. The DPOF (Print order) mark is displayed for registered images.

1. Press the (Playback) button to switch to playback mode.

2. MENU → Print (DPOF) → desired mode → on the control wheel

<table>
<thead>
<tr>
<th>DPOF (This Image)</th>
<th>Orders printing the currently displayed image in single-image mode.</th>
</tr>
</thead>
<tbody>
<tr>
<td>DPOF (Multiple Images)</td>
<td>You can select and order multiple images to be printed.</td>
</tr>
<tr>
<td></td>
<td>After step 2, select an image to be printed, then press .</td>
</tr>
<tr>
<td></td>
<td>To cancel the selection, press again to cancel the mark.</td>
</tr>
<tr>
<td></td>
<td>MENU → [OK] →</td>
</tr>
</tbody>
</table>

Notes

- The DPOF (Print order) mark cannot be added to the following images:
  - Movies
  - Images in the internal memory
- You can add a DPOF (Print order) mark to a maximum 999 images.

Clearing the DPOF mark

Select the image to clear the DPOF registration, then press on the control wheel in the same procedure as when making a DPOF mark. The DPOF mark disappears and the DPOF registration is cleared.

Related Topic

Printing still images
Rotate

Rotates a still image. Use this to display a horizontal orientation image in vertical orientation.

1. Press the (Playback) button to switch to playback mode.
2. MENU → ➤ (Rotate) → on the control wheel
3. Press on the control wheel.

The still image will be rotated counter-clockwise.
If you want to rotate the image again, repeat step 3.

Notes
• You cannot rotate the following images:
  – 3D images
  – Movies
  – Images displayed in a burst group
• You may not be able to rotate images shot with other cameras.
• When viewing images on a computer, the image rotation information may not be reflected depending on the software.
In-Camera Guide

This camera contains an internal function guide. This allows you to search the camera's functions according to your needs. You can use the selected function after reading the guide.

1. Press the MENU button.

2. Select the desired MENU item using ▲ / ▼ on the control wheel.

3. Press the ？/roscope (In-Camera Guide) button. The operation guide for the MENU item you have selected in step 2 is displayed.

4. Use ▲ / ▼ to switch among summary, operation and details screens.
   - When [Use this function] is displayed on the screen, select it to switch to that mode.
   - If you press the ？/roscope (In-Camera Guide) button when the MENU screen is not displayed, you can search the guide using keywords or icons.

5. Press the ？/roscope (In-Camera Guide) button to exit the guide.
### MENU items that cannot be set according to View Mode

In the table below, a check mark indicates function that can be changed, while — indicates function that cannot be changed.

**Note**

- Only the items that are available for each mode are displayed on the screen.
Changing camera settings

You can change the settings on the [Settings] screen.

1. Press the MENU button to display the Menu screen.

2. Select (Settings) with ▲ / ▼ on the control wheel, then press ● on the control wheel to display the setup screen.

3. Select the desired category by using ▲ / ▼ on the control wheel or turning the control wheel, then press ●.

4. Select the desired item by using ▲ / ▼ on the control wheel or turning the control wheel, then press ●.

5. Select the desired setting, then press ●.

Notes
- [Shooting Settings] appears only when settings have been entered from shooting mode.
● [Memory Card Tool] appears only when a memory card is inserted in the camera, while [Internal Memory Tool] appears only when a memory card is not inserted.
Movie format

You can set the recording method used to record movies.

1. Set the camera to shooting mode.
2. MENU → (Settings) → (Shooting Settings) → [Movie format] → desired mode →

<p>| | |</p>
<table>
<thead>

AVCHD format
AF Illuminator

The AF illuminator supplies fill light to focus more easily on a subject in dark surroundings. The AF illuminator emits red light allowing the camera to focus easily when the shutter button is pressed halfway, until the focus is locked. The ON indicator appears at this time.

1. Set the camera to shooting mode.
2. MENU → (Settings) → (Shooting Settings) → [AF Illuminator] → desired mode →

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>✔</td>
<td>Auto</td>
</tr>
<tr>
<td></td>
<td>Off</td>
</tr>
</tbody>
</table>

**Notes**

- Focus is achieved as long as the AF illuminator light reaches the subject, regardless of whether light fails to reach the center of the subject.
- You cannot use the AF illuminator in the following situations:
  - In movie mode
  - In [iSweep Panorama]
  - When (Landscape), (Night Scene), (Pet) or (Fireworks) mode is selected in Scene Selection.
  - When [Self-Timer] is set to [Self-portrait One Person] or [Self-portrait Two People].
- When you use the AF illuminator, the normal AF range finder frame is disabled and a new AF range finder frame is displayed by a dotted line. AF operates with priority on subjects located near the center of the frame.
- The AF illuminator emits very bright light. Although there is no health hazard, do not look directly into the AF illuminator emitter at close range.
**Grid Line**

With reference to the grid lines, you can easily set a subject in a horizontal/vertical position.

1. Set the camera to shooting mode.

2. MENU → (Settings) → (Shooting Settings) → [Grid Line] → desired mode → 

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>On</td>
<td>Displays the grid lines. The grid lines are not recorded.</td>
</tr>
<tr>
<td>Off</td>
<td>Does not display the grid lines.</td>
</tr>
</tbody>
</table>
Clear Image Zoom

Total zoom scale when [Clear Image Zoom] is selected (including 10× optical zoom)

[Clear Image Zoom] allows you to enlarge the image with close to the original image quality when shooting still images. The camera zooms images with the original image quality first depending on the selected still image size. When [Clear Image Zoom] is set to [On], the camera automatically switches over to [Clear Image Zoom] when the zoom range without deterioration of the original image quality is exceeded.

1. Set the camera to shooting mode.
2. MENU → (Settings) → (Shooting Settings) → [Clear Image Zoom] → desired mode
   - Off Does not use [Clear Image Zoom].
   - On Zooms the images with close to the original image quality, depending on the image size. Switches to [Clear Image Zoom] within the range where \( \times \) is displayed.

Notes

- To zoom the images within the range where original image quality can be retained, set both [Clear Image Zoom] and [Digital Zoom] to [Off]. [Details]
- [Clear Image Zoom] function does not operate in the following situations:
  - In movie mode
  - In [iSweep Panorama]
  - In [Picture Effect]
  - In [Background Defocus]
  - When the Smile Shutter function is activated.
  - When [Self-Timer] is set to [Self-portrait One Person] or [Self-portrait Two People].
  - When [Cont. Shooting Interval] is set to [High] or [Low].
  - When \( \times \) (Backlight Correction HDR) mode is selected in Scene Selection.
- The Face Detection function does not operate in the range of [Clear Image Zoom].

Total zoom scale when [Clear Image Zoom] is selected (including 10× optical zoom)

The supported zoom scales are different depending on the image size.

<table>
<thead>
<tr>
<th>Image size</th>

</tr>
<tr>
<td>16:9(2M)</td>
<td>Approx. 51×</td>
</tr>
</tbody>
</table>
Digital Zoom

Sets the total zoom scale (including 10× optical zoom). When [Digital Zoom] is set to [On], the camera zooms images without deteriorating the original quality, but it automatically switches over to [Digital Zoom] when that zoom range (for achieving the original image quality) is exceeded. When [Clear Image Zoom] is set to [On] to shoot still images, the camera automatically switches over to [Digital Zoom] when the [Clear Image Zoom] range is exceeded. [Details]

1. Set the camera to shooting mode.
2. MENU → (Settings) → (Shooting Settings) → [Digital Zoom] → desired mode →

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Does not use [Digital Zoom].</td>
</tr>
<tr>
<td>On</td>
<td>The quality of the resulting image will deteriorate when pQ is displayed, since the zoom function is switched over to [Digital Zoom], but you can enlarge images 4× up to the maximum zoom scale.</td>
</tr>
</tbody>
</table>

Notes

- When using [Clear Image Zoom], the maximum zoom scale for [Digital Zoom] is 2×.
- [Digital Zoom] is not available in the following situations:
  - In [iSweep Panorama]
  - In [Picture Effect]
  - In [Background Defocus]
  - When the Smile Shutter function is activated.
  - When [Self-Timer] is set to [Self-portrait One Person] or [Self-portrait Two People].
  - When 2H (Backlight Correction HDR) mode is selected in Scene Selection.
- The Face Detection function does not operate in the range of [Digital Zoom].
Wind Noise Reduct.

Reduces the noise of the wind when shooting movies.

1. Set the camera to shooting mode.

2. MENU → (Settings) → (Shooting Settings) → [Wind Noise Reduct.] → desired mode

| On  | Reduces/Does not reduce wind noise. |
| Off |                               |

Note

- If [Wind Noise Reduct.] is set to [On] even though the wind is not blowing strongly, the recorded sounds other than the wind may be hard to hear.
Red Eye Reduction

The flash strobos two or more times before shooting to reduce the red-eye phenomenon when using the flash.

1. Set the camera to shooting mode.
2. MENU → (Settings) → (Shooting Settings) → [Red Eye Reduction] → desired mode

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto</td>
<td>When the Face Detection function is activated, the flash strobos automatically to reduce the red-eye phenomenon.</td>
</tr>
<tr>
<td>On</td>
<td>The flash always strobos to reduce the red-eye phenomenon.</td>
</tr>
<tr>
<td>Off</td>
<td>Does not use Red Eye Reduction.</td>
</tr>
</tbody>
</table>

What causes the red-eye phenomenon?
Pupils become dilated in dark environments. Flash light is reflected off the blood vessels at the back of the eye (retina) (A), causing the “red-eye” phenomenon.

Other ways to reduce red-eye
- Select ISO (High Sensitivity) mode in Scene Selection. (The flash is set to [Off] automatically.)
- When the eyes of the subject turn out red, correct the image with [Retouch] → [Red Eye Correction] on the viewing menu or with the software “PlayMemories Home.”

Notes
- To avoid blurring of images, hold the camera firmly until the shutter is released. It usually takes a second until the shutter is released, and also be sure not to allow the subject to move during this period.
- Red Eye Reduction may not produce the desired effects. It depends on individual differences and conditions, such as distance to the subject, or if the subject looked away from the pre-strobe.
- If you do not use the Face Detection function, Red Eye Reduction does not work, even when you select [Auto].
- [Red Eye Reduction] is set to [Off] in the following situations:
  - In [Background Defocus]
  - In 3D shooting mode
  - When (Anti Motion Blur), (Hand-held Twilight), (High Sensitivity), (Gourmet), (Pet) or (Fireworks) mode is selected in Scene Selection.
  - When Smile Shutter function is activated.
Blink Alert

When an image with the subject’s eyes closed is recorded while Face Detection is activated, the message “Blinked eye detected” is displayed.

1. Set the camera to shooting mode.

2. MENU → (Settings) → (Shooting Settings) → [Blink Alert] → desired mode →

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>✔</td>
<td>Auto</td>
</tr>
<tr>
<td></td>
<td>Off</td>
</tr>
</tbody>
</table>
Write Date

Sets whether to record a shooting date on the still image.

1. Set the camera to shooting mode.
2. MENU → (Settings) → (Shooting Settings) → [Write Date] → desired mode →

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>On ( )</td>
<td>Records a shooting date. When [On] is selected, the mark will appear on the bottom right of the screen while shooting. However, in some shooting modes that cannot record dates on images, the mark will disappear.</td>
</tr>
<tr>
<td>Off</td>
<td>Does not record a shooting date.</td>
</tr>
</tbody>
</table>

Notes

- You cannot record dates in the following situations:
  - In movie mode
  - When shooting still images while recording a movie (Dual Rec)
  - When shooting panoramic images
  - In burst shooting mode
  - In [Easy Mode]
  - In 3D shooting mode
- If you shot images with the date once, you cannot delete the date from the images later.
- The dates are doubly printed, if you set the camera to superimpose the dates when printing.
- The recorded time of the image cannot be superimposed on the image.
**Disp. Resolution**

Adjusts the image quality of the image displayed on the screen.

1. Set the camera to shooting mode.
2. `MENU` → 📷 (Settings) → 📷 (Shooting Settings) → [Disp. Resolution] → desired mode →

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>✔️ Standard</td>

<tr>
<td>On</td>
<td>Turns on the beep/shutter sound when you press the control wheel/shutter button.</td>
</tr>
<tr>
<td>Off</td>
<td>Turns off the beep/shutter sound.</td>
</tr>
</tbody>
</table>
Panel Brightness

You can select the screen brightness from levels 1 to 5. The screen becomes brighter as the number rises. When you use the camera in bright outside light, select a higher number to see the screen easier.

1. MENU → (Settings) → (Main Settings) → [Panel Brightness] → desired mode

Notes
- The brighter the screen, the faster the battery pack runs out.
- The screen grows dark if you do not operate the camera while the power is on.
- When the high-temperature indicator ( \[ Details\] ) is displayed, the screen may grow dark regardless of the settings.
Language Setting

Selects the language to be used in the menu items, warnings and messages.

1. MENU → (Settings) → (Main Settings) → [Language Setting] → desired mode

▲ Back to top
Display color

Sets the color of the screen display.

1. MENU → (Settings) → (Main Settings) → [Display color] → desired mode →

<table>
<thead>
<tr>

</tbody>
</table>
Demo Mode

You can set whether to use a demonstration of Smile Shutter or AVCHD movie playback. When there is no need to view a demonstration, set to [Off].

1. MENU → (Settings) → (Main Settings) → [Demo Mode] → desired mode →

<table>
<thead>
<tr>
<th>Demo Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mode1</td>
<td>A demonstration of the shooting functions will be performed.</td>
</tr>
<tr>
<td>Mode2</td>
<td>Automatically starts the Smile Shutter demonstration when no operation is performed for 15 seconds.</td>
</tr>
<tr>
<td>Mode3</td>
<td>If no operation is performed for a set period of time while the camera is connected to an HD TV, a demonstration of AVCHD movie playback will automatically be performed.</td>
</tr>
<tr>
<td>Off</td>
<td>Does not perform a demonstration.</td>
</tr>
</tbody>
</table>

Notes
- Pressing the shutter button during the Smile Shutter demonstration operates the shutter, but no image is recorded.
- During a demonstration, if the number of images saved in the internal memory increases, the camera may automatically delete the images. It is recommended to make a backup copy of the images on the internal memory before a demonstration.
Initialize

Initializes the setting to the default setting.
Even if you execute this function, the images are retained.

1. MENU → (Settings) → (Main Settings) → [Initialize] → [OK] →

Note
- Be sure not to remove the battery pack while initializing.
**Function Guide**

You can select whether or not the function guide is displayed when you operate the camera.

1. MENU → (Settings) → (Main Settings) → [Function Guide] → desired mode → ☑

<table>
<thead>
<tr>
<th>On</th>
<th>Displays/hides the function guide.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td></td>

“Music Transfer”
TransferJet

You can select TransferJet communication settings. TransferJet is a close-up, wireless transfer technology that allows data to be transferred by closely aligning two products that you want to communicate with each other. To find out whether your camera is equipped with the TransferJet function, check for the TransferJet mark on the bottom of the camera. Using a Memory Stick with TransferJet (sold separately) allows images to be transferred between TransferJet-compatible devices.

For more details on TransferJet, see the Operating Instructions supplied with Memory Stick with TransferJet.

1. MENU → 🏷️ (Settings) → ⚙️ (Main Settings) → [TransferJet] → desired mode → ●

<table>
<thead>
<tr>
<th>On</th>
<th>Communicates/Does not communicate using TransferJet.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td></td>
</tr>
</tbody>
</table>

What is TransferJet?

TransferJet allows you to share images by sending and receiving image data. Insert a Memory Stick with TransferJet in your camera and align two 📸 (TransferJet) marks of the camera and another device that supports this function.

For details on image transfer, see [Details].

Notes

- In Easy Mode, [TransferJet] is fixed to [Off].
- While aboard an airplane, set [TransferJet] to [Off]. In addition, always follow all regulations governing the location in which the camera is being used.
- The connection is cut if transfer cannot be made within about 30 seconds. If this happens, select [Yes] and again align two 📸 (TransferJet) marks on the camera and another device.
- The Memory Stick with TransferJet and camera models with TransferJet are not sold in some countries and regions due to local laws and regulations.
- Set the [TransferJet] function to [Off] in countries and regions other than where you purchased your camera. Depending on the country or region, if you use the TransferJet function, you may be liable due to local restrictions on transmission of electromagnetic waves.

Send by TransferJet
TransferJet standard
Eye-Fi

Transferring image data using the Eye-Fi card

Sets whether to use the upload function of an Eye-Fi card (commercially available), when you use the Eye-Fi card with this camera.

[Eye-Fi] is displayed only when the Eye-Fi card is inserted in the camera.

1. MENU → 📷 (Settings) → ⏳ (Main Settings) → [Eye-Fi] → desired mode →

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>On</td>
<td>Uses the upload function. The Eye-Fi mode display icon on the screen will change depending on the communication mode of the Eye-Fi card.</td>
</tr>
<tr>
<td>Off</td>
<td>Does not use the upload function.</td>
</tr>
</tbody>
</table>

Notes

- As of November 2011, Eye-Fi cards are sold in the U.S.A., Canada, Japan and some countries in the European Union.
- For more information on the Eye-Fi card, contact the manufacturer or seller of Eye-Fi cards directly.
- Eye-Fi cards are permitted only in the countries and regions in which they were purchased. You may be held liable due to local restrictions.
- The Eye-Fi card has a wireless LAN function. Do not insert the Eye-Fi card where wireless LAN is prohibited, such as while aboard an airplane. If the Eye-Fi card is inserted, set [Eye-Fi] to [Off]. When the uploading function of the Eye-Fi card is set to [Off], ⏳OFF is displayed on the screen.

Transferring image data using the Eye-Fi card

1. Set the wireless LAN access point settings or the transferring direction settings of the Eye-Fi card. For details, refer to the operating instructions supplied with the Eye-Fi card.
2. After the settings are finished, insert the Eye-Fi card into the camera, and shoot the images. The recorded images are automatically transferred via the wireless LAN to the PC, etc.

Notes

- When uploading image data, [Eco Mode] is not available.
- If the ⏳OFF (error) icon is displayed, eject and re-insert the Eye-Fi card, or turn the power of the camera off and on again. If the ⏳OFF (error) icon is still displayed, the Eye-Fi card may be corrupted. For details, contact Eye-Fi, Inc.
- Wireless LAN communication may be interrupted by the other communication devices. If data reception is insufficient, move the camera closer to the access point.
- Some Eye-Fi cards have an “Endless Memory Mode.” This product does not support “Endless Memory Mode.” Make sure that Eye-Fi cards that you insert into this product have “Endless Memory Mode” turned off. For details on setting “Endless Memory Mode”, refer to the operating instructions supplied with the Eye-Fi card.
Version

Displays the software version installed on this camera.

1. MENU → 📗 (Settings) → ⏰ (Main Settings) → [Version]
Format

Formats the memory card or the internal memory.
When you use a memory card with this camera for the first time, it is recommended to format the card using the camera for stable performance of the memory card before shooting. Note that formatting permanently erases all data on the memory card, and is unrecoverable. Save precious data on a computer, etc.

1. MENU → (Settings) → (Memory Card Tool) or (Internal Memory Tool) → [Format] → [OK] →

Note
- Note that formatting permanently erases all data including even protected images.
Create REC.Folder

Creates a folder in a memory card for recording images.
Images are recorded in the newly created folder until you create another folder or select another
recording folder.

1. MENU →  (Settings) →  (Memory Card Tool) → [Create REC.Folder] → [OK] →

On the folders
After a new folder is created, you can change the storage destination folder. [Details]

Notes
- This item is not displayed when the internal memory is used to record images.
- When you insert a memory card that was used with other equipment into the camera and shoot
  images, a new folder may be automatically created.
- Up to 4,000 images can be stored in one folder. When the folder capacity is exceeded, a new
  folder is automatically created.
Change REC.Folder

Changes the folder in the memory card that is currently used for recording images.

1. MENU → (Settings) → (Memory Card Tool) → [Change REC.Folder]

2. Select a folder with ← / → on the control wheel.

3. [OK] →

Notes
- This item is not displayed when the internal memory is used to record images.
- You cannot select a folder with a number that has only "MSDCF" or "ANV01" as a recording folder.
- You cannot move recorded images to another folder.
Delete REC.Folder

Deletes a folder for recording images in a memory card.

1. MENU → (Settings) → (Memory Card Tool) → [Delete REC.Folder]
2. Select a folder with ◀ / ▶ on the control wheel.
3. [OK] → ●

Notes
- This item is not displayed when the internal memory is used to record images.
- If you delete the folder set as the recording folder using [Delete REC.Folder], the folder that has the largest folder number is selected as the next recording folder.
- If a folder contains protected images or files that cannot be played back by the camera, images other than these images are deleted and the folder will remain.
Copy

Copies all images in the internal memory to a memory card.

1. Insert a memory card with sufficient free capacity into the camera.
2. MENU →  (Settings) →  (Memory Card Tool) → [Copy] → [OK] →

Notes
- Use a fully charged battery pack. If you attempt to copy image files using a battery pack with little remaining charge, the battery pack may run out, causing copying to fail or possibly corrupting the data.
- Images cannot be copied individually.
- The original images in the internal memory are retained even after copying. To delete the contents of the internal memory, remove the memory card after copying, then format the internal memory ([Format] in [Internal Memory Tool]).
- The data will be copied to the recording folder that is currently being used, with a number one higher than the largest data number in that folder. [Details]
File Number

Selects the method used to assign file numbers to images.

1. MENU → (Settings) → (Memory Card Tool) → [File Number] → desired mode →

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>

Viewing an image on an HD TV using the HDMI Cable (sold separately)

Connect the camera to an HD (High Definition) TV that has an HDMI jack using the HDMI Cable (sold separately).

1. Turn off both the camera and the TV.

2. Connect the HDMI connector of the camera (A) and the HDMI jack of the TV (B) using an HDMI Cable (sold separately) (C).

3. Turn on the TV and set the input.

4. Press the (Playback) button to turn on the camera.

Images shot with the camera appear on the TV. Select the desired image with the control wheel.

“PhotoTV HD”

This camera is compatible with the “PhotoTV HD” standard. By connecting a Sony TV compatible with “PhotoTV HD” using an HDMI Cable (sold separately), a whole new world of photos can be comfortably enjoyed in breathtaking Full HD quality.

- “PhotoTV HD” allows for a highly-detailed, photo-like expression of subtle textures and colors.
- When the camera is connected to a Sony TV compatible with Video A mode using an HDMI Cable, your TV is automatically set to the picture quality suitable for still images. When the setting of the TV is set to Video, the picture quality is set to that suitable for movies.
- When playing back an AVCHD movie, it is recommended that you set [View Mode] to [AVCHD view].
- For details, see the operating instructions of the TV.

Notes

- Images shot in [VGA] image size cannot be played back in the HD format.
- Do not connect the camera and equipment to be connected using both output terminals. When the camera and TV are connected using output terminals, no video or sound are produced. Such a connection can also cause problems with the camera and/or connected equipment.
- The camera may not work properly with some HD TVs. For example, you may not be able to view a video on your HD TV or hear sound from the HD TV.
- Use an HDMI Cable with the HDMI logo.
- Use an HDMI mini connector on one end (for the camera), and a connector suitable for connection.
to your TV on the other end. You cannot view images on a TV that does not have an HDMI connector.

- Recording may automatically stop to protect the camera after a period of time if you are shooting movies when the camera and TV are connected by an HDMI cable (sold separately).
- Open the HDMI cover all the way when inserting the HDMI cable into the camera.

Viewing an image on a “BRAVIA” Sync-compatible TV

When you use a TV that has “BRAVIA” Sync (compatible with SYNC MENU) support, you can operate the playback functions of the camera using the remote controller supplied with the TV by connecting the camera to the TV using an HDMI Cable (sold separately).

1. Connect the HDMI connector of the camera (A) and the HDMI jack of the TV (B) using an HDMI Cable (sold separately) (C).

2. Turn on the TV and set the input.

3. Press the (playback) button of the camera to turn on the camera.

4. MENU → (Settings) → (Main Settings) → [CTRL FOR HDMI] → [On] →

5. Press the SYNC MENU button of the TV’s remote controller to select the desired mode.

</tr>
<tr>
<td>Exit</td>
<td>Exits from the playback operations.</td>
</tr>
</tbody>
</table>

Notes
- When the camera is connected to a TV set using an HDMI Cable, the functions that you can operate are limited.
- You can perform the operation of the camera with the remote controller of your TV by connecting
your camera to a “BRAVIA” Sync-compatible TV. For details, see the operating instructions of the TV.

- If the camera functions in an undesired manner when you are controlling it using the TV’s remote controller, such as when connected via HDMI to another manufacturer’s TV, press MENU → [Settings] → [CTRL FOR HDMI] → [Off].
- When the camera is in Easy Mode, SYNC MENU does not appear on the TV.
- Open the HDMI cover all the way when inserting the HDMI Cable into the camera.
Viewing 3D images on a 3D TV

You can view 3D images recorded on the camera in 3D format by connecting the camera to a 3D TV using an HDMI Cable (sold separately).
Refer also to the operating instructions supplied with the TV.

1. Turn off both the camera and the TV.
2. Connect the camera to the TV using an HDMI Cable (sold separately).

3. Turn on the TV and set the input.
4. Press the (Playback) button to turn on the camera.
5. MENU  →  (3D Viewing)  →  on the control wheel
Images shot with the camera appear on the TV.
6. Select images and set the desired mode using the control wheel.

<table>
<thead>
<tr>

</thead>
</table>
| ● | Plays back scrolling images shot in 3D Sweep Panorama mode.  
  ● Press  ◀ /  ▶ to move the direction of scrolling.  
  ● When playing back a 3D image shot in [16:9] image size, scrolling playback is not available. |
| ▲ | Continuously plays back only 3D images. |
You can change the zoom scale for 3D still images using the W/T (zoom) lever.

**Notes**
- When you select (3D Viewing) mode, only 3D images are displayed.
- If you play back an image shot in [3D Sweep Panorama] mode with the shooting direction set to up or down, the image is played back horizontally on the TV.
- Do not connect the camera and equipment to be connected using output terminals. When the camera and TV are connected using output terminals, no video and sound are produced. Such a connection can also cause trouble of the camera and/or connected equipment.
- This function may not work properly with some TVs. For example, you may not be able to view a video on your TV, output in 3D mode or hear sound from the TV.
- Use an HDMI Cable with the HDMI logo.
- When connecting the camera to a TV, use an HDMI Cable that can be connected to the mini jack on the camera end and to the TV jack.
- Recording may automatically stop to protect the camera after a period of time when you shoot movies in the condition where the camera and TV are connected by an HDMI Cable (sold separately).
- Open the HDMI cover all the way when inserting the HDMI Cable into the camera.

</tbody>
</table>

*1 64-bit editions and Starter (Edition) are not supported. Windows Image Mastering API (IMAPI) Ver.2.0 or later is required to create a disc by installing the “Expanded Feature.”

*2 Starter (Edition) is not supported.

**Mac**

<table>
<thead>
<tr>
<th>OS (pre-installed)</th>
<th>USB Connection: Mac OS X v10.3 to v10.7 Music Transfer: Mac OS X v10.4 to v10.7*</th>
</tr>
</thead>
</table>

* Equipped with Intel processor

**Notes**

- Operation is not assured in an environment based on an upgrade of the operating systems described above or in a multi-boot environment.
- If you connect two or more USB devices to a single computer at the same time, some devices, including the camera, may not operate, depending on the types of USB devices you are using.
- Connecting the camera using a USB interface that is compatible with Hi-Speed USB (USB 2.0) allows advanced transfer (high speed transfer), as the camera is compatible with Hi-Speed USB (USB 2.0).
- When your computer resumes activity from suspend or sleep mode, communication between the camera and your computer may not recover at the same time.
Below are examples of the functions available when you use “PlayMemories Home.”

- “PlayMemories Home” allows you to import images shot with the camera to a computer for display. Make a USB connection between the camera and your computer, and click [Import].
- You can display images stored on a computer by shooting date in a calendar display.
- You can save and print images with the date.
- You can correct (Red Eye Correction, etc.) still images, and change the shooting date and time.
- Blu-ray discs, AVCHD discs and DVD-Video discs can be created from AVCHD movies imported to a computer. (Expanded Feature)
- You can upload images to a network service. (An internet connection environment is required.) (Expanded Feature)
- For other details, see (PlayMemories Home Help Guide).

**Expanded Feature**

With “PlayMemories Home (Lite Version)”, the basic functions are available, such as importing the images to a computer and displaying them by shooting date in a calendar display, etc. To take advantage of the various “PlayMemories Home” functions, connect to the Internet and install the “Expanded Feature.”

**Note**

- Mac does not support “PlayMemories Home.” Use the application bundled with the Mac to play back images.
Installing “PlayMemories Home” (Windows)

1. Turn on the camera and your computer, then connect the camera to the computer using a micro USB cable (supplied) (A).

   Windows 7: Device Stage appears on the computer.

2. Windows 7: Select “PlayMemories Home” on Device Stage.
   Windows XP/Windows Vista: Click [Computer] (in Windows XP, [My Computer]) → [PMHOME], and double-click [PMHOME.EXE].

3. Proceed with installation, following the instructions on the screen.
   When installation is complete, “PlayMemories Home” (Lite Version) launches.
   - The guide screen for installing the “Expanded Feature” of “PlayMemories Home” is displayed on the computer. Continue the installation following the on-screen instructions.
   - It is necessary to be connected to the Internet to install the “Expanded Feature.” If you start the program without installing these functions, the installation guide will be displayed if you click on a function that can only be used with the “Expanded Feature.”
   - For details on “PlayMemories Home”, see (PlayMemories Home Help Guide) or the following PlayMemories Home support page (English only):
     http://www.sony.co.jp/pmh-se/

Notes
- Log on as Administrator.
- Set MENU → (Settings) → (Main Settings) → [LUN Setting] to [Multi].
- If Device Stage does not activate with Windows 7, click [Computer] → camera icon → media icon, and double-click [PMHOME.EXE].
- The initial Device Stage screen which does not contain specific model information may appear depending on your computer settings for Windows 7. If this happens, download the latest information, following the instructions on the screen.
- It may be necessary to restart your computer. When the restart confirmation message appears, restart the computer following the instructions on the screen.
- DirectX may be installed depending on your computer’s system environment.
- Mac does not support “PlayMemories Home.” Use the application bundled with the Mac to play back images.
- If “PlayMemories Home” has already been installed on your computer, connect the camera with the computer and register your camera with “PlayMemories Home.” The available functions activate.
- If “PMB (Picture Motion Browser)” has already been installed on your computer, “PlayMemories Home” will overwrite it and will be installed. Some functions of “PMB” may become unavailable.
<table>

Copyright 2012 Sony Corporation
“Music Transfer”

“Music Transfer” allows you to replace the Music files provided in the camera at the factory with your favorite tracks, and to delete and add Music files. You can also restore the tracks stored at the factory to your camera.

Download the software from the following URL and install it on your computer.

Windows: http://www.sony.co.jp/imsoft/Win/
Mac: http://www.sony.co.jp/imsoft/Mac/

- The following track types can be imported using “Music Transfer”:
  - MP3 files stored on the hard disk of your computer
  - Music CD tracks
  - Preset-music saved on the camera

- Before starting up “Music Transfer” perform MENU → (Settings) → (Main Settings) → [Download Music], and connect the camera to the computer.

For other details, see the help in “Music Transfer”.

Related Topic
- Download Music
- Empty Music
Software for Mac

For details on software for Macs, access the following URL:
http://www.sony.co.jp/imsoft/Mac/
- You can access the above URL by connecting the camera to the Mac computer and clicking [FOR_MAC.URL] in [PMHOME]. Set MENU → (Settings) → (Main Settings) → [LUN Setting] to [Multi].

Note
- The available software varies depending on the area.
Connecting the camera to the computer

1. Connect the camera to your computer using a micro USB cable (supplied) (A).

   - When connecting the camera to a computer using the micro USB cable, power feeding from the computer starts if [USB Power Supply] is set to [On]. ([On] is the default setting.)

Importing images to a computer

"PlayMemories Home" allows you to easily import images.
For details on "PlayMemories Home" functions, see the "PlayMemories Home Help Guide".

Importing images to a Windows computer without using “PlayMemories Home”
When the AutoPlay Wizard appears after making a USB connection between the camera and a computer, click [Open folder to view files] → [OK] → [DCIM] or [MP_ROOT] → copy the desired images to the computer.
• If the Device Stage screen appears with Windows 7, double-click [Browse Files] → media icon → folder in which the image you want to import is stored.

Importing images to a Mac computer without using “PlayMemories Home”
Connect the camera to your Mac computer. Double-click the newly recognized icon on the desktop → the folder in which the image you want to import is stored. Then drag and drop the image file on to the hard disk icon.

Notes
• Use "PlayMemories Home" for operations such as when importing AVCHD movies to a computer. (Windows)
• Use the “iMovie” software bundled with Mac for operations such as importing AVCHD movies to a computer. (Mac)
• If operations are performed on an AVCHD movie file or folder on the camera from a PC while the camera is connected to a PC, it may destroy the image file or playback may become impossible. Do not delete or copy AVCHD movies on the camera's memory card from a PC. Sony bears no responsibility for the result of operations of this type.
• The camera creates a 3D image by combining a JPEG file with an MPO file. If you delete either file on a PC, you cannot playback the 3D image.
Deleting the USB connection

Perform the procedures from step 1 to 2 below before:
- Disconnecting the cable.
- Removing a memory card.
- Inserting a memory card into the camera after copying images from the internal memory.
- Turning off the camera.

1. Click the disconnect icon ( ) on the tasktray.

   - With Windows 7, click first, then click .

2. Click [Safely remove USB Mass Storage Device].

Notes
- Drag and drop the icon of the memory card or the drive icon to the “Trash” icon beforehand when you use a Mac computer, and the camera is disconnected from the computer.
- The disconnect icon may not appear when you use a Windows 7 computer. In this case, you can disconnect the camera from the computer without following the above steps.
Selecting the method for creating a disc of movies

Characteristics of each type of disc

Creating a disc with a device other than a computer

You can create a disc from AVCHD movies that have been recorded with this camera. Select the method that suits your disc player.

For details on the method for creating a disc using “PlayMemories Home”, see “PlayMemories Home Help Guide.”

To import movies into a PC, see [Details].

<table>
<thead>
<tr>

</tr>
<tr>
<td>For saving images in standard definition image quality (STD)</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

Features of each type of disc

- **High-definition image quality (HD)**
  - Using a Blu-ray disc enables you to record high-definition image quality (HD) movies of a longer duration than DVD discs.

- **High-definition image quality (HD) (AVCHD disc)**
  - High-definition image quality (HD) movies can be recorded on DVD media, such as DVD-R discs, and a high-definition image quality (HD) disc is created.
  - You can play a high-definition image quality (HD) disc on AVCHD format playback devices, such as a Sony Blu-ray disc player and a PlayStation 3. You cannot play the disc on ordinary DVD players.

- **Standard definition image quality (STD)**
  - Standard definition image quality (STD) movies converted from high-definition image quality (HD) movies can be recorded on DVD media, such as DVD-R discs, and a standard definition image quality (STD) disc is created.
Types of discs that can be used with “PlayMemories Home”

The following 12-cm discs can be used with “PlayMemories Home.” For information on Blu-ray discs, see [Details].

- DVD-R / DVD+R / DVD+R DL: Cannot be re-written.
- DVD-RW / DVD+RW: Can be re-written and used again.

- Always maintain your PlayStation 3 to use the latest version of the PlayStation 3 system software.
- The PlayStation 3 may not be available in some countries/regions.

Creating a disc with a device other than a computer

You can also create a disc using a Blu-ray recorder or a DVD Writer. Depending on which device you use, the types of disc that can be created vary.

<table>
<thead>
<tr>
<th>Devices</th>
<th>Disc type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Creates a Blu-ray disc or a disc in standard definition image quality (STD) using a Blu-ray recorder.</td>
<td>High-definition image quality (HD)</td>

<td>High-definition image quality (HD) (AVCHD disc)</td>
</tr>
<tr>
<td>Creates a disc in standard definition image quality (STD) using a device such as an HDD recorder.</td>
<td>Standard definition image quality (STD)</td>
</tr>
</tbody>
</table>

Notes

- For details on how to create a disc, refer to the operating instructions of the device you use.
- If you create a disc using Sony DVDirect (DVD Writer), use the memory card slot of the DVD Writer or connect the DVD Writer via USB connection to transfer the data.
- If you use Sony DVDirect (DVD Writer), check that the firmware is updated to the newest version. For details, see the following URL: http://sony.storagesupport.com/
Copying high-definition image quality (HD) movies on to DVD discs (AVCHD discs)

An AVCHD disc with HD picture quality can be created from AVCHD movies imported to a PC using “PlayMemories Home” software.

1. Turn on the PC and insert a blank DVD disc in the DVD drive.
2. Start “PlayMemories Home.”
3. Click (Create Discs).
4. Select [AVCHD (HD)] from a disc selection drop-down list.
5. Select the AVCHD movie to be written to the disc.
6. Click [Add].
   - You can also add the AVCHD movies by dragging and dropping them.
7. Create the disc by following the on-screen instructions.

Playing an AVCHD disc on a PC
AVCHD discs can be played on a PC using “PlayMemories Home”. Select the drive into which you have inserted the DVD disc in “PlayMemories Home”, and click [Player for AVCHD]. For details, see “PlayMemories Home Help Guide.”
- Images may not play back smoothly depending on the PC environment.

Notes
- Be sure that the “Expanded Feature” of “PlayMemories Home” have already been installed.
- You cannot record the following images on an AVCHD disc:
  - Still images
  - MP4 movies
- When you create AVCHD discs from movies recorded in [AVC HD 24M (FX)], it will take time as the image quality must be converted. To save [AVC HD 24M (FX)] movies without converting the image quality, use Blu-ray discs.
- Disc creation may take time.
Creating standard definition image quality (STD) DVD discs

DVD discs with standard definition image quality (STD) can be created using “PlayMemories Home” software and selecting an AVCHD movie imported to the PC.

1. Turn on the power of the PC and insert a blank DVD disc in the DVD drive.
   - If software other than “PlayMemories Home” starts automatically, exit that software.
2. Start “PlayMemories Home.”
3. Click (Create Discs).
4. Select [DVD-Video (STD)] from a disc selection drop-down list.
5. Select the AVCHD movie to be written to the disc.
6. Click [Add].
   - You can also add the AVCHD movies by dragging and dropping them.
7. Create the disc by following the on-screen instructions.

Notes
- Be sure that the “Expanded Feature” of “PlayMemories Home” have already been installed. [Details]
- Discs cannot be created for MP4 movies.
- Disc creation may take time due to converting the AVCHD movie to standard definition image quality (STD).
- The PC must be connected to the Internet the first time a DVD-Video disc is created.
Creating Blu-ray discs

You can create Blu-ray discs from AVCHD movies imported to a PC. The PC in question must be capable of creating Blu-ray discs. BD-R (not re-writable) or BD-RE (re-writable) discs can be used. Multi-session recordings cannot be made. To create Blu-ray discs using "PlayMemories Home", be sure to install the dedicated add-on software. For details, see the following URL:
http://support.d-imaging.sony.co.jp/BDUW/
To install, your PC must be connected to the Internet. For detailed operations, see "PlayMemories Home Help Guide".
Printing still images

You can print still images using the following methods.

- Printing directly using a printer which supports your memory card type.
  For details, see the operating instructions supplied with the printer.
- Printing using a computer
  You can import images to a computer using the “PlayMemories Home” software and print the images.
  For details, see the “PlayMemories Home Help Guide”.
- Printing at a shop
  You can take a memory card to a photo printing service shop. As long as the shop supports photo printing services conforming to DPOF, you can make a DPOF (Print order) mark on images in advance in the playback mode so that you do not have to reselect them when you print them out at the shop. Before you take image data to a shop, always copy (back up) your data.

Notes

- When you print still images shot in [16:9] mode, both edges may be cut off.
- You cannot print panorama images depending on the printer.
If you have problems

If you experience trouble with the camera, try the following solutions.

1. Check the items under “Troubleshooting”, then check your camera.
   If a code such as “C/E:  
   0 :  
   0 ” appears on the screen, see “Self-diagnosis display”.

2. Remove the battery pack, wait for about one minute, re-insert the battery pack, then turn on the power.

3. Initialize the settings. [Details]

4. Consult your Sony dealer or local authorized Sony service facility.
   ● Be aware that by sending the camera for repair, you give consent that the contents of the internal memory, music files may be checked.
   ● Additional information on this product and answers to frequently asked questions can be found at our Customer Support Website.

   http://www.sony.net/
Battery pack and power

Cannot insert the battery pack into the camera.
- Make sure the direction of the battery pack is correct, and insert it until the battery eject lever is locked.

Cannot turn on the camera.
- After inserting the battery pack into the camera, it may take a few moments for the camera to power up.
- Make sure that the battery pack is inserted correctly.
- The battery pack will discharge by itself even if you do not use it. Charge the battery pack before use.
- The battery pack terminals are dirty. Gently wipe away any dirt with a soft cloth.
- Check that the battery pack type is NP-BN or NP-BN1.

The power turns off suddenly.
- Depending on the camera and battery temperature, the power may turn off automatically to protect the camera. In this case, a message is displayed on the screen before the power turns off.
- If you do not operate the camera for a certain period of time while the power is on and [Eco Mode] is set to [Standard] or [Max], the camera turns off automatically to prevent wearing down the battery pack. Turn on the camera again.

The remaining charge indicator is incorrect.
- This is caused when you use the camera in an extremely hot or cold location.
- Battery capacity decreases over time and through repeated use. If decreased usage time between charges becomes significant, it is probably time to replace it with a new one.

The Power/charge lamp of the camera flashes while charging the battery.
- Check that the battery pack type is NP-BN or NP-BN1.
- The Power/charge lamp of the camera flashes infrequently when you use a battery pack that has not been used for a long time. In such cases, remove the battery pack from the camera and re-insert it.
- For details, see “Battery pack” [Details].

The battery is not charged even if the Power/charge lamp turns off and charging is finished.
- This happens when you charge the battery pack in an extremely hot or cold location. Charge the battery pack within the proper charging temperature range of between 10°C to 30°C (50°F to 86°F).
Shooting still images/movies

Cannot record images.
- If images are recorded on the internal memory even when a memory card is inserted into the camera, make sure that the memory card is fully inserted into the camera.
- Check the free capacity of the internal memory or memory card. If it is full, do one of the following:
  - Delete unnecessary images. [Details] [Details]
  - Change the memory card.
- You cannot record images while charging the flash.
- When recording movies, it is recommended that you use the following memory cards:
  - “Memory Stick PRO Duo” (Mark2) media, “Memory Stick PRO-HG Duo” media
  - SD memory card, SDHC memory card or SDXC memory card (Class 4 or faster)
- Set [Demo Mode] to [Off]. [Details]

Smile Shutter function does not work.
- No image is shot if a smiling face is not detected. [Details]
- Set [Demo Mode] to [Off]. [Details]

Anti-blur function does not work.
- The anti-blur function may not work properly when shooting night scenes.
- Shoot after pressing the shutter button halfway down.

Recording takes a long time.
- When the shutter speed becomes slower than a certain speed, for example, when you shoot images in dark locations, the camera automatically reduces the image noise. This function is called NR (noise reduction) slow shutter and the shooting time takes longer.

The image is out of focus.
- The subject is too close. When shooting, make sure to position the lens farther away from the subject than the shortest shooting distance (approximately 5 cm (2 inches) (W)/1.5 m (4 ft 11 1/8 inches) (T) from the lens).
- (Night Scene), (Landscape) or (Fireworks) mode is selected in the Scene Selection when shooting still images.

Zoom does not work.
- You cannot use the optical zoom when:
  - Shooting in [iSweep Panorama]
  - Shooting in [3D Sweep Panorama]
  - Shooting in [Sweep Multi Angle]
You cannot use zoom functions other than optical zoom when:
- In [Superior Auto]
- In [Background Defocus]
- ([Backlight Correction HDR] mode is selected in the Scene Selection
- The Smile Shutter is working.
- [Self-Timer] is set to [Self-portrait One Person] or [Self-portrait Two People].

**Cannot select the Face Detection function.**

- You can select Face Detection only when the focus mode is set to [Multi AF] and the metering mode is set to [Multi].

**The flash does not work.**

- You cannot use the flash when:
  - Shooting in Background Defocus mode
  - Burst mode is selected. [Details]
  - (Anti Motion Blur) mode, (Night Scene) mode, (Hand-held Twilight) mode, (High Sensitivity) mode or (Fireworks) mode is selected in Scene Selection.
  - Shooting in Sweep Panorama mode.
  - Shooting in 3D mode
  - Shooting in movie mode.
- Set the flash to [On] when the Scene Selection mode is set to (Landscape), (Gourmet), (Pet), (Beach), (Snow) or (Underwater) mode. [Details]

**Fuzzy white circular spots appear in images shot using the flash.**

- Particles (dust, pollen, etc.) in the air, and the floating object underwater reflected the flash light and appeared in the image. This is not a malfunction. [Details]

**The close-up shoot function (Macro) does not work.**

- The camera automatically adjusts the focus. Press and hold the shutter button halfway down. Focus adjustment may take some time when shooting a close subject.
- (Landscape), (Night Scene) or (Fireworks) mode is selected in the Scene Selection.

**The date and time are not displayed on the screen.**

- While shooting, the date and time are not displayed. They are displayed only during playback.

**The F value and shutter speed flash when you press and hold the shutter button halfway down.**

- The exposure is incorrect. Correct the exposure. [Details]

**The image colors are not correct.**

- Adjust the White Balance. [Details]

**Noise appears in the image when you view the screen in a dark place.**

- The camera is attempting to increase the visibility of the screen by temporarily brightening the image under conditions of low illumination. There is no effect on the recorded image.
You can see a dark shadow on the image.

- Depending on the brightness of the subject, you may see a dark shadow when you change the aperture. This is not a malfunction.

The eyes of the subject come out red.

- Set [Red Eye Reduction] to [Auto] or [On]. [Details]
- Shoot the subject at a distance closer than the flash range using the flash.
- Light the room and shoot the subject.
- Retouch the image using [Retouch] → [Red Eye Correction] in viewing menu [Details], or correct using “PlayMemories Home” [Details].

Dots appear and remain on the screen.

- This is not a malfunction. These dots are not recorded.

Cannot shoot images in succession.

- The internal memory or memory card is full. Delete unnecessary images. [Details] [Details]
- The battery level is low. Insert a charged battery pack.

The same image is shot several times.

- Set [Cont. Shooting Settings] to [Single Shooting]. [Details]
- [Scene Recognition] is set to [Advanced]. [Details]
Viewing images

Cannot play back images.

- Make sure that the memory card is fully inserted into the camera.
- The folder/file name has been changed on your computer.
- No guarantees are made for playing back, on this camera, files containing images which were processed on a computer or images which were shot using other cameras.
- The camera is in USB mode. Delete the USB connection. [Details]
- Use “PlayMemories Home” to play images stored on a PC with this camera. Use the application bundled with the Mac to play back the images.

Cannot play back stereoscopic images on the camera.

- Stereoscopic images can be played back on this camera only when that image has been recorded using [Sweep Multi Angle] mode.
- 3D images consist of a JPEG file and an MPO file. If either file is deleted on the PC, the camera may not operate correctly.

The date and time are not displayed.

- The screen display is set to display images only. Press DISP (Display Setting) on the control wheel to display information. [Details]

Cannot hear music during slideshow.

- Slideshow is played back with [Continuous Playback]. Select [Slideshow with music] and play back.
- Transfer music files to the camera with “Music Transfer”. [Details]

The image does not appear on the TV.

- For viewing movies, the camera and television must use the same color television system. [Details]
- Check whether the connection is correct. [Details]

The 3D images do not appear on the TV even though the camera is in [3D Viewing] mode.

- Check that the TV is set to display the 3D images.
Computers

Your computer does not recognize the camera.
- Set [USB Connect Setting] to [Mass Storage]. [Details]
- Use the micro USB cable (supplied).
- Disconnect the USB cable from both the computer and the camera, and connect it again firmly.
- Disconnect all equipment other than the camera, the keyboard and the mouse from the USB connectors of your computer.
- Connect the camera directly to your computer without passing through a USB hub or other device.
- Set [USB Power Supply] to [Off]. Your computer may recognize the camera.

Cannot import images.
- Connect the camera and your computer correctly making a USB connection. [Details]
- When you shoot images with a memory card formatted by a computer, you may not be able to import the images to a computer. Shoot using a memory card formatted by the camera. [Details]

After making a USB connection, “PlayMemories Home” does not start automatically.
- Make the USB connection after the computer is turned on.

Cannot play back images on your computer.
- If you are using “PlayMemories Home”, refer to “PlayMemories Home Help Guide”. [Details]
- Consult the computer or software manufacturer.

The image and sound are interrupted by noise when you view a movie on a computer.
- You are playing back the movie directly from the memory card. Import the movie to your computer using “PlayMemories Home” and play it back. [Details]

Images once exported to a computer cannot be viewed on the camera.
- Use “PlayMemories Home” to play images stored on a PC with this camera. Use the application bundled with the Mac to play back the images.
- Register the image in the Image Database File and play in [Date View]. [Details]
Memory card

Cannot insert a memory card.

• Insert the memory card in the correct direction.

You have formatted a memory card by mistake.

• All the data on the memory card is deleted by formatting. You cannot restore it.

Images are recorded on the internal memory even when a memory card is inserted into the camera.

• Make sure that the memory card is fully inserted into the camera.
**Internal memory**

**Cannot play back or record images using the internal memory.**
- There is a memory card inserted in the camera. Remove it.

**Cannot copy the data stored in the internal memory to a memory card.**
- The memory card is full. Copy to a memory card with sufficient capacity.

**Cannot copy the data on the memory card or the computer to the internal memory.**
- This feature is not available.
Printing

Images are printed with both edges cut off.

- Depending on your printer, all the edges of the image may be cut off. Especially when you print an image shot with the image size set to [16:9], the lateral end of the image may be cut off.

- When printing images using your printer, cancel the trimming or borderless settings. Consult the printer manufacturer as to whether the printer provides these functions or not.

- When having images printed at a digital print shop, ask the shop whether they can print the images without cutting off both edges.

Cannot print images with the date.

- Select MENU → 📅 (Shooting Settings) → [Write Date] → [On] to insert a date on the image. Make sure that once the date is inserted, you cannot remove that date from the image.

- Using “PlayMemories Home”, you can insert the date on still images that have been recorded without a date. [Details]

Cannot print the 3D images as they are displayed on the camera's screen.

- The 3D images displayed on the camera are MPO files, but the images to be printed are JPEG files, so in some cases, the images to be printed out are not the same as the ones displayed on the screen.
Others

The lens gets fogged.
- Moisture condensation has occurred. Turn off the camera and leave it for about an hour before using it.

The camera stops with the lens portion extended.
- Do not attempt to force a lens that has stopped moving.
- Insert a charged battery pack, then turn the camera on again.

The camera turns off with the lens portion extended.
- The battery pack is discharged. Replace it with a charged battery pack, then turn the camera on again.
- Do not attempt to force a lens that has stopped moving.

The camera becomes warm when you use it for a long time.
- This is not a malfunction.

The Clock Set screen appears when you turn on the camera.
- Set the date and time again. [Details]
- The internal rechargeable backup battery has discharged. Insert a charged battery, and set aside for 24 hours or more with the power left off.

The date or time is incorrect.
- The Area Setting is set to a different location than your current location. Change the setting by MENU → (Settings) → [Clock Settings] → [Area Setting].
Self-diagnosis display

If a code starting with a letter of the alphabet appears, the self-diagnosis function on the camera is working. The last two digits (indicated by □ □) will differ depending on the state of the camera. If you cannot solve the problem even after trying the following corrective actions a few times, the camera may need repair.

Contact your Sony dealer or local authorized Sony service facility.

C:32:  □ □

- There is trouble with the camera's hardware. Turn the power off and on again.

C:13:  □ □

- The camera cannot read or write data on the memory card. Try turning off and on the camera again, or taking out and inserting the memory card several times.
- The internal memory has experienced a format error, or an unformatted memory card is inserted. Format the internal memory or the memory card. [Details]
- The inserted memory card cannot be used with the camera, or the data is damaged. Insert a new memory card.

E:61:  □ □
E:62:  □ □
E:91:  □ □

- A camera malfunction has occurred. Initialize the camera, then turn the power on again. [Details]

E:94:  □ □

- There is a malfunction when writing or deleting data. Repair is required. Contact your Sony dealer or local authorized Sony service facility. Be prepared to give all numbers in the error code beginning from the E.
Messages

If the following messages appear, follow the instructions.

![Battery Warning]

- The battery level is low. Charge the battery pack immediately. Depending on the conditions of use or the type of battery pack, the indicator may flash even though there are still 5 minutes to 10 minutes of remaining battery time left.

For use with compatible battery only

- The battery inserted is not an NP-BN or NP-BN1 type battery pack.

Camera overheating Allow it to cool

- The camera temperature has risen. The power may turn off automatically, or you may be unable to record movies. Leave the camera in a cool location until the temperature goes down.

Internal memory error

- Turn the power off and then on again.

Reinsert the memory card.

- The inserted memory card cannot be used in the camera. [Details]
- The terminal section of the memory card is dirty.
- The memory card is damaged.

This memory card is not formatted correctly.

- The inserted memory card cannot be used in the camera. [Details]

This memory card may not be able to record or play images correctly.

- The inserted memory card cannot be used in the camera. [Details]

Buffer overflow. Writing to the media was not completed in time.

- If you use a memory card that has been recorded and erased repeatedly, or that was formatted on a different camera, the data writing speed may be too slow. First back up any data on the card to a computer, and then reformat the card before using it. [Details]
- The writing speed of the memory card you are using is not sufficient for movie recordings. Use a "Memory Stick PRO-HG Duo" media, "Memory Stick PRO Duo" (Mark2) media, or an SD card (Class 4 or faster).
The memory card is locked. Check the tab.
- You are using the memory card with the write-protect switch, and the switch is set to the LOCK position. Set the switch to the recording position.

This is a read-only memory card.
- The camera cannot record or delete images on this memory card.

Writing to the memory card was not completed correctly Recover data
- Reinsert the memory card, and select [OK] to recover data.

No images
- No images that can be played back have been recorded in the internal memory.
- No images that can be played back have been recorded in this folder of the memory card.

No still images
- There are no 3D images that can be played back in [3D Viewing] mode.
- The selected folder or date does not contain a file that can be played back in a slideshow.

File found which was not recognized
- You tried to delete a folder containing a file that cannot be played on this camera. Delete the file on a computer and then delete the folder.

Folder error. Cannot record to the selected folder. Please select a different folder.
- A folder with the same first three digit number already exists on the memory card (for example: 123MSDCF and 123ABCDE). Select another folder [Details], or create a new folder [Details].

Cannot create more folders
- The folder with a name beginning with “999” exists on the memory card. You cannot create any folders if this is the case.

Empty folder contents
- You tried to delete a folder containing one or more files. Delete all of the files and then delete the folder.

Folder protected
- You tried to delete a folder that is protected as read only on a computer.

File Error.
- An error occurred while the image was playing back.
  No guarantees are made for playing back, on this camera, files containing images which were processed on a computer or images which were shot using other cameras.
Read only folder
- You have selected a folder that cannot be set as a recording folder on the camera. Select another folder. [Details]

File protected
- Release the protection. [Details]

Image size over limit
- You are playing back an image with size that cannot be played back on the camera.

Unable to detect face for retouch
- You may not be able to retouch the image depending on the image.

(Vibration warning indicator)
- Camera shake may occur due to insufficient light. Use the flash, or mount the camera on a tripod to secure the camera.

MP4 12M is not supported with this memory card.
MP4 6M is not supported with this memory card.
- For recording movies, it is recommended that you use a “Memory Stick PRO Duo” (Mark2) media, a “Memory Stick PRO-HG Duo” media or an SD card (Class 4 or faster).

Movie with different video signal format from this device recorded. Recording is unavailable in this movie format.
- Set [Movie format] to [MP4]. [Details]

Turn the power off and on again
- The lens malfunction.

Maximum number of images already selected.
- Up to 10 files can be selected when using [TransferJet].
- Up to 100 files can be selected when using [Multiple Images].
- You can add DPOF (Print order) marks to up to 999 files.

Error Playing Music
- Delete the Music file, or replace it with a normal Music file.
- Execute [Empty Music], then download a new Music file.

Error Formatting Music
- Execute [Empty Music].

Operation cannot be executed in unsupported files.
• Processing and other editing functions of the camera cannot be performed on image files that have been processed using a computer or images that were recorded with other cameras.

**Preparing image database file. Please wait.**

• The camera restores the date information, etc., in cases where images have been deleted on a PC, etc.
• The necessary Image Database File is created after the memory card is formatted.

[Image 1]

• The number of images exceeds that for which date management in a database file by the camera is possible. To register additional images in the Image Database File, delete images in [Date View].

**Inconsistencies found in image database file. Recover data.**

• AVCHD movies cannot be recorded or played because the Image Database File is corrupt. Follow the on-screen instructions to recover the Image Database File.

[Image 2]

• It is not possible to record to the camera’s Image Database File or play back using [Date View]. Use “PlayMemories Home” to back up all images to a PC and use it to restore a memory card.

**Image Database File error. Cannot recover data.**

• Import all of the images to the computer with “PlayMemories Home”, and format the memory card or the internal memory.
  To view the images again with the camera, export the imported images to the camera with “PlayMemories Home”. [Details]

**Recording function unavailable due to high internal temperature.**

• The camera temperature has risen. You cannot record images until the temperature has gone down.

**Recording has stopped due to increased camera temperature.**

• Recording has stopped due to a rise in temperature while recording a movie. Please wait until the temperature goes down.

[Image 3]

• When you record movies for a long time, the camera temperature rises. In this case, stop recording movies.

**Connection failed**

• Check the TransferJet reception port and transfer data correctly. [Details]

**Some files were not sent**

**Some files were not received**

• Either communication was cut off during image transfer, or transfer was cut off because device memory is full. Check the available memory capacity and try transferring data using TransferJet.
again.

- You may not be able to receive the image depending on the image.
The camera cannot take full advantage of some features under certain circumstances.
When shooting under the following conditions, either recompose the shot or change the shooting mode, then shoot the images again.

**Low light conditions**
- Shooting panoramic images
- Background Defocus
- Tracking focus
- 3D Still Image
- Shooting with the 3D Sweep Panorama function
- Shooting with the Sweep Multi Angle function

**Overly bright conditions**
- Background Defocus
- Tracking focus

**Varying levels of brightness**
- Tracking focus

**Flickering lights**
- Shooting panoramic images
- Shooting with the 3D Sweep Panorama function

**Subjects too close to the camera**
- Shooting panoramic images
- Shooting with the 3D Sweep Panorama function
- Shooting with the Sweep Multi Angle function
- Background Defocus

**Subjects too far from the camera**
- Background Defocus

**Large moving subjects or subjects that move too quickly**
- Superior Auto
- Background Defocus
- Tracking focus
- 3D Still Image
- Shooting with the 3D Sweep Panorama function

**Subjects too small or too large**
- Tracking focus
- Background Defocus
- Shooting with the 3D Sweep Panorama function

**Background the same color as the subject**
- Background Defocus

**Scenes with little contrast, such as the sky or a sandy beach**
- Shooting panoramic images
- Superior Auto
- Shooting with the 3D Sweep Panorama function
- Shooting with the Sweep Multi Angle function

**Scenes changing constantly, such as waterfalls**
- Shooting panoramic images
- Superior Auto
Precautions

Internal memory and memory card back up

Do not turn off the camera, remove the battery pack, or remove the memory card while the access lamp is lit. Otherwise, the internal memory data or the memory card may be damaged. Be sure to make a backup copy to protect your data.

On database files

When you insert a memory card without a database file into the camera and turn on the power, part of the memory card capacity is used to automatically create a database file. It may take some time until you can perform the next operation.

Do not use/store the camera in the following places

- In an extremely hot, cold or humid place
  In places such as in a car parked in the sun, the camera body may become deformed and this may cause a malfunction.
- Under direct sunlight or near a heater
  The camera body may become discolored or deformed, and this may cause a malfunction.
- In a location subject to rocking vibration
- Near strong magnetic place
- In sandy or dusty places
  Be careful not to let sand or dust get into the camera. This may cause the camera to malfunction, and in some cases this malfunction cannot be repaired.

On carrying

- Do not sit down in a chair or other place with the camera in the back pocket of your trousers or skirt, as this may cause malfunction or damage the camera.

On operating temperatures

- Your camera is designed for use under the temperatures between 0°C and 40°C (32°F and 104°F). Shooting in extremely cold or hot places that exceed this range is not recommended.
On moisture condensation
- If the camera is brought directly from a cold to a warm location, moisture may condense inside or outside the camera. This moisture condensation may cause a malfunction of the camera.
- If moisture condensation occurs, turn off the camera and wait about an hour for the moisture to evaporate. Note that if you attempt to shoot with moisture remaining inside the lens, you will be unable to record clear images.

Functions built into this camera
- This manual describes each of the functions of TransferJet-compatible/incompatible devices, 1080 60i-compatible devices and 1080 50i-compatible devices.
- To check if your camera supports the TransferJet function, and whether it is a 1080 60i-compatible device or 1080 50i-compatible device, check for the following marks on the bottom of the camera.
  - TransferJet-compatible device: (TransferJet)
  - 1080 60i-compatible device: 60i
  - 1080 50i-compatible device: 50i
- Do not watch 3D images shot with this camera for extended periods of time on 3D-compatible monitors.
- When you view 3D images shot with this camera on 3D-compatible monitors, you may experience discomfort in the form of eye strain, fatigue, or nausea. To prevent these symptoms, we recommend that you take regular breaks.
  - However, you need to determine for yourself the length and frequency of breaks you require, as they vary according to the individual. If you experience any type of discomfort, stop viewing the 3D images until you feel better, and consult a physician as necessary. Also refer to the operating instructions supplied with the device or software you have connected or are using with this camera. Note that a child’s eyesight is still at the development stage (particularly children below the age of 6). Consult a pediatrician or ophthalmologist before letting your child view 3D images, and make sure he/she observes the above precautions when viewing such images.

On image data compatibility
- The camera conforms with DCF (Design rule for Camera File system) universal standard established by JEITA (Japan Electronics and Information Technology Industries Association).
- Sony does not guarantee that the camera will play back images recorded or edited with other equipment, or that other equipment will play back images recorded with the camera.

Notes when playing movies on other devices
- This camera uses MPEG-4 AVC/H.264 High Profile for AVCHD format recording. Movies recorded in AVCHD format with this camera cannot be played by the following devices.
  - Other devices compatible with AVCHD format that does not support High Profile
  - Devices incompatible with the AVCHD format
- This camera also uses MPEG-4 AVC/H.264 Main Profile for MP4 format recording. For this reason, movies recorded in MP4 format with this camera cannot be played on devices other than those that support MPEG-4 AVC/H.264.
- You can play a high-definition image quality (HD) disc only on AVCHD format playback devices. A DVD player or DVD recorder cannot play back a disc recorded in high-definition image quality (HD) because they are not compatible with the AVCHD format. In addition, if you insert a high-definition image quality (HD) disc recorded in AVCHD format into a DVD player or DVD recorder, you may not be able to eject the disc.

Notes on the screen and lens
- The screen is manufactured using extremely high-precision technology so over 99.99% of the pixels are operational for effective use. However, some tiny black and/or bright dots (white, red, blue or green) may appear on the screen. These dots are a normal result of the manufacturing process and do not affect the recording.
- Exposing the screen or the lens to direct sunlight for long periods may cause malfunctions. Be careful when placing the camera near a window or outdoors.
- Do not press against the screen. The screen may be discolored and that may cause a malfunction.
- Images may trail across on the screen in a cold location. This is not a malfunction.
- Be careful not to bump the movable lens, and be careful not to apply force to it.
On the internal rechargeable backup battery

This camera has an internal rechargeable battery for maintaining the date and time and other settings regardless of whether the power is on or off. This rechargeable battery is continually charged as long as you are using the camera. However, if you use the camera for only short periods, it discharges gradually, and if you do not use the camera at all for about one month it becomes completely discharged. In this case, be sure to charge this rechargeable battery before using the camera. However, even if this rechargeable battery is not charged, you can still use the camera, but the date and time will not be indicated.

Charging method of the internal rechargeable backup battery

Insert a charged battery pack in the camera, and then leave the camera for 24 hours or more with the power off.
Battery pack

On charging the battery pack

- Charge the battery pack (supplied) before using the camera for the first time.
- You can charge the battery pack even if it is not completely discharged. In addition, even if the battery pack is not fully charged, you can use the partially charged capacity of the battery pack as is.
- We recommend charging the battery pack in an ambient temperature of between 10°C to 30°C (50°F to 86°F). The battery pack may not be effectively charged in temperatures outside this range.

Effective use of the battery pack

- Battery performance decreases in low temperature surroundings. So in cold places, the operational time of the battery pack is shorter. We recommend the following to ensure longer battery pack use:
  - Put the battery pack in a pocket close to your body to warm it up, and insert it in the camera immediately before you start shooting.
  (If there are any metal objects such as keys in your pocket, be aware of short-circuits.)
- The battery pack will run out quickly if you use the flash or zoom frequently.
- We recommend having spare battery packs handy for two times or three times the expected shooting time, and making trial shots before taking the actual shots.
- Do not expose the battery pack to water. The battery pack is not water-resistant.
- Do not leave the battery pack in extremely hot places, such as in a car or under direct sunlight.
- You may not be able to turn on the camera or the battery pack may not be effectively charged if the terminal section of the battery is dirty. In this case, wipe any dust off lightly using a soft cloth or a cotton swab to clean the battery.

Remaining battery charge

- A remaining charge indicator appears on the screen.
  ![Remaining battery charge indicator]

  A: High
  B: Low
- It takes about one minute until the correct remaining charge indicator appears.
- The remaining charge indicator may not be correct under certain circumstances.
- When [Eco Mode] is set to [Standard] or [Max], if you do not operate the camera for a certain period of time while the power is on, the screen becomes dark, then the camera turns off automatically (Auto power-off function).
How to store the battery pack

- Fully discharge the battery pack before storing and store the camera in a cool, dry place. To maintain the battery pack's function, charge the battery pack and then fully discharge it in the camera at least once a year while storing.
- To use the battery pack up, leave the camera in slideshow playback mode until the power goes off.
- To prevent staining the terminal, short-circuiting, etc., be sure to use a plastic bag, etc. to keep away from metal materials when carrying or storing.

On battery life

- The battery life is limited. Battery capacity decreases over time and through repeated use. If decreased usage time between charges becomes significant, it is probably time to replace it with a new one.
- The battery life varies according to how it is stored and the operating conditions and environment in which each battery pack is used.

Compatible battery pack

- The NP-BN (supplied) or NP-BN1 (sold separately) can be used with this model.
Charging the battery pack

- The supplied AC Adaptor is dedicated to this camera. Do not connect with other electronic devices. Doing so may cause a malfunction. Also, make sure to use a genuine Sony AC Adaptor.
- If the Power/charge lamp of the camera flashes during charging, remove the battery pack being charged, and then insert the same battery pack into the camera securely again. If the Power/charge lamp flashes again, this may indicate a battery error or that a battery pack other than the specified type has been inserted. Check that the battery pack is the specified type. If the battery pack is the specified type, remove the battery pack, replace it with a new or different one and check that the battery is charged correctly. If the battery is charged correctly, a battery error may have occurred.
- If the Power/charge lamp flashes even if the AC Adaptor is connected to the camera and the wall outlet (wall socket), this indicates that the charging has stopped temporarily and is on standby. Charging stops and enters standby status automatically when the temperature is outside of the recommended operating temperature. When the temperature returns to the appropriate range, charging resumes and the Power/charge lamp lights up again. We recommend charging the battery pack in an ambient temperature of between 10°C to 30°C (50°F to 86°F).
- Using the supplied AC Adaptor, you can charge the battery pack inserted in the camera. In addition, power supply via AC Adaptor in playback mode is also available. However, in shooting mode, power supply via AC Adaptor is not available. You need the AC Adaptor AC-UD10 (sold separately) for shooting to supply a power from the wall outlet (wall socket) during shooting.
Memory card

Memory card
Note on using the memory card adaptor (sold separately)
“Memory Stick” media
When using a “Memory Stick Duo” media with standard sized “Memory Stick” media slot
Notes on using a “Memory Stick Micro” media (sold separately)

● MultiMediaCard cannot be used.
● “Memory Stick Duo” media of up to 32 GB and SD cards of up to 64 GB have been tested and proven to operate with your camera.
● “Memory Stick Micro” media of up to 16 GB and microSD memory cards of up to 32 GB have been tested and proven to operate with your camera.
● When recording movies, it is recommended that you use the following memory cards:
  - MEMORYSTICK PRO DUO (Mark2) (“Memory Stick PRO Duo” (Mark2) media)
  - MEMORYSTICK PRO-HG DUO (“Memory Stick PRO-HG Duo” media)
  - MEMORYSTICK MICRO (Mark2) (“Memory Stick Micro” (Mark2) media)
  - SD card (Class 4 or faster), microSD memory card (Class 4 or faster)

Notes

● To ensure stable operations of the memory card, we recommend that you use this camera to format any memory card being used with this camera for the first time. Note that formatting will erase all data recorded on the memory card. This data cannot be restored. Be sure to backup any important data to a PC or other storage location.
● If you repeatedly record/delete images, fragmentation of data may occur on the memory card. Movies may not be able to be saved or recorded. In such a case, save your images to a PC or other storage location, then [Format].
● A memory card formatted with a computer is not guaranteed to operate with the camera.
● Data read/write speeds differ depending on the combination of the memory card and the equipment used.
●

246
Data may be corrupted in the following cases:

- When the memory card is removed or the camera is turned off during a read or write operation
- When the memory card is used in locations subject to static electricity or electrical noise

- We recommend backing up important data.
- Do not attach a label on the memory card itself nor on a memory card adaptor.
- Do not touch the terminal section of the memory card with your hand or a metal object.
- Do not strike, bend or drop the memory card.
- Do not disassemble or modify the memory card.
- Do not expose the memory card to water.
- Do not leave the memory card within the reach of small children. They might accidentally swallow it.

- Insert a memory card that fits the memory card slot size. Otherwise, it will cause a malfunction.
- Do not use or store the memory card under the following conditions:
  - High temperature locations such as the hot interior of a car parked in direct sunlight
  - Locations exposed to direct sunlight
  - Humid locations or locations with corrosive substances present

---

**Note on using the memory card adaptor (sold separately)**

- When inserting a memory card into a memory card adaptor, make sure the memory card is inserted facing in the correct direction, then insert it all the way in. Incorrect insertion may result in a malfunction.

---

**“Memory Stick” media**

The types of “Memory Stick Duo” media that can be used with the camera are listed in the table below. However, proper operation cannot be guaranteed for all “Memory Stick Duo” media functions.

<table>
<thead>
<tr>
<th>“Memory Stick” media type</th>
<th>Recording/Playback</th>
</tr>
</thead>
<tbody>
<tr>
<td>Memory Stick Duo (without MagicGate)</td>
<td>○ *1</td>
</tr>
<tr>
<td>Memory Stick Duo (with MagicGate)</td>
<td>○ *2</td>
</tr>
<tr>
<td>MagicGate Memory Stick Duo</td>
<td>○ <em>1</em>2</td>
</tr>
<tr>
<td>Memory Stick PRO Duo</td>
<td>○ <em>2</em>3</td>
</tr>
<tr>
<td>Memory Stick PRO-HG Duo</td>
<td>○ <em>2</em>3*4</td>
</tr>
<tr>
<td>Memory Stick Micro (M2)</td>
<td>○ *2</td>
</tr>
<tr>
<td>Memory Stick Micro (Mark2)</td>
<td>○ <em>2</em>3</td>
</tr>
</tbody>
</table>

*1 High-speed data transfer using a parallel interface is not supported.
*2 “Memory Stick Duo” media, “MagicGate Memory Stick Duo” media, “Memory Stick PRO Duo” media, “Memory Stick PRO-HG Duo” media and “Memory Stick Micro” media are equipped with MagicGate functions. MagicGate is copyright protection technology that uses encryption technology. Data recording/playback that requires MagicGate functions cannot be performed with the camera.

*3 Movies recorded in AVCHD format, [MP4 12M] and [MP4 6M] size movies cannot be recorded to “Memory Stick” media other than “Memory Stick PRO Duo” media, “Memory Stick PRO-HG Duo” media or “Memory Stick Micro” (Mark2) media.

*4 This camera does not support 8-bit parallel data transfer. It performs the same 4-bit parallel data transfer as the “Memory Stick PRO Duo” media.

---

**When using a “Memory Stick Duo” media with standard sized “Memory Stick” media slot**

You can use the “Memory Stick Duo” media by inserting it into the “Memory Stick Duo” media Adaptor (sold separately).
"Memory Stick Duo" media Adaptor

**Notes on using a “Memory Stick Micro” media (sold separately)**

- This product is compatible with “Memory Stick Micro” media (“M2”). “M2” is an abbreviation for “Memory Stick Micro” media.
- To use a “Memory Stick Micro” media with the camera, be sure to insert the “Memory Stick Micro” media into an “M2” Adaptor as large as of Duo size. If you insert a “Memory Stick Micro” media into the camera without an “M2” Adaptor as large as of Duo size, you might not be able to remove it from the camera.
- Do not leave the “Memory Stick Micro” media within the reach of small children. They might accidentally swallow it.

On cleaning

Cleaning the lens and flash
Wipe the lens and flash with a soft cloth to remove fingerprints, dust, etc.

Cleaning the flash
Clean the flash surface before use. The heat of flash emission may cause dirt on the flash surface to start smoking or burning. Wipe the flash surface with a soft cloth to remove dirt or dust, etc.

Cleaning the camera surface
Clean the camera surface with a soft cloth slightly moistened with water, then wipe the surface with a dry cloth. To prevent damage to the finish or casing:

- Do not expose the camera to chemical products such as thinner, benzine, alcohol, disposable cloths, insect repellent, sunscreen or insecticide.
- Do not touch the camera with any of the above on your hand.
- Do not leave the camera in contact with rubber or vinyl for a long time.
Number of still images

The number of still images may vary depending on the shooting conditions and the memory card. (Units: Images)

Notes

- When the number of remaining shootable images is greater than 9,999, the ">9999" indicator appears.
- When an image shot with other cameras is played back on this camera, the image may not appear in the actual image size.
Recordable time of movies

The table below shows the approximate maximum recording times. These are the total times for all movie files. The recordable time may vary depending on the shooting conditions and the memory card. (h (hour), m (minute))

<table>
<thead>
<tr>
<th>Quality/Size</th>
<th>Internal memory</th>
<th>Memory card formatted with this camera</th>
</tr>
</thead>
<tbody>
<tr>

<td>—</td>
<td>35 m</td>
</tr>
<tr>
<td>MP4 3M</td>
<td>—</td>
<td>1 h 5 m</td>
</tr>
</tbody>
</table>

The number in ( ) is the minimum recordable time.

Continuous shooting is possible for approximately 29 minutes at one time. The maximum size of an MP4-format movie file is up to approximately 2 GB.

**Note**
- The recordable time of movies varies because the camera is equipped with VBR (Variable Bit Rate), which automatically adjusts image quality depending on the shooting scene.
- When you record a fast-moving subject, the image is clearer but the recordable time is shorter because more memory is required for recording.
- The recordable time also varies depending on the shooting conditions, the subject or the image quality/size settings.
You can use the AC Adaptor (supplied) in any country or region where the power supply is within 100 V to 240 V AC, 50 Hz/60 Hz.

**Note**
- An electronic voltage transformer is unnecessary and its use may cause a malfunction.
On TV color systems

To view movies shot using this camera on a television, the camera and television must use the same color television system. Check the color TV system for the country or region where you are using the camera.

NTSC system
Bahama Islands, Bolivia, Canada, Central America, Chile, Colombia, Ecuador, Jamaica, Japan, Korea, Mexico, Peru, Surinam, Taiwan, the Philippines, the U.S.A., Venezuela, etc.

PAL system
Australia, Austria, Belgium, China, Croatia, Czech Republic, Denmark, Finland, Germany, Holland, Hong Kong, Hungary, Indonesia, Italy, Kuwait, Malaysia, New Zealand, Norway, Poland, Portugal, Romania, Singapore, Slovak Republic, Spain, Sweden, Switzerland, Thailand, Turkey, United Kingdom, Viet Nam, etc.

PAL-M system
Brazil

PAL-N system
Argentina, Paraguay, Uruguay

SECAM system
Bulgaria, France, Greece, Guiana, Iran, Iraq, Monaco, Russia, Ukraine, etc.
AVCHD format

The AVCHD format has been developed for high-definition digital video cameras when recording an HD (High-Definition) signal at the 1080i*1 or 720p*2 specification using high-efficiency compression coding technology. The MPEG-4 AVC/H.264 format is adopted to compress video data, and the Dolby Digital or Linear PCM system is used to compress audio data.

The MPEG-4 AVC/H.264 format is capable of compressing images at higher efficiency than that of the conventional image compressing format. The MPEG-4 AVC/H.264 format enables a high definition video signal shot on a digital video camera recorder to be recorded on 8 cm DVD discs, hard disk drive, flash memory, memory card, etc.

Recording and playback on the camera

Based on the AVCHD format, your camera records with the high definition image quality (HD) mentioned below.

Video signal*3:
- 1080i-compatible device
  - MPEG-4 AVC/H.264 1920×1080/60i, 1440×1080/60i
- 1080 50i-compatible device
  - MPEG-4 AVC/H.264 1920×1080/50i, 1440×1080/50i
Audio signal: Dolby Digital 2ch
Recording media: Memory card

*1 1080i specification
A high definition specification which utilizes 1,080 effective scanning lines and the interlace system.

*2 720p specification
A high definition specification which utilizes 720 effective scanning lines and the progressive system.

*3 Data recorded in AVCHD format other than the above mentioned cannot be played on your camera.
TransferJet standard

TransferJet communications conform to the standard given below.

**TransferJet standard:**
Conforms to PCL Spec. Rev. 1.0

**Protocol Class Name (communication type):**
- SCSI Block Device Target
- OBEX Push Server
- OBEX Push Client

- Use the “SCSI” communication protocol above when connecting to a TransferJet-compatible device (sold separately). Or, use the “OBEX” communication protocol when sharing data between cameras.
License

Notes on the License

This camera comes with software that are used based on licensing agreements with the owners of that software. Based on requests by the owners of copyright of these software applications, we have an obligation to inform you of the following. Please read the following sections.

Licenses (in English) are recorded in the internal memory of your camera. Establish a Mass Storage connection between the camera and a computer to read licenses in the "PMHOME" - "LICENSE" folder.

THIS PRODUCT IS LICENSED UNDER THE AVC PATENT PORTFOLIO LICENSE FOR THE PERSONAL AND NON-COMMERCIAL USE OF A CONSUMER TO (i) ENCODE VIDEO IN COMPLIANCE WITH THE AVC STANDARD (“AVC VIDEO”) AND/OR (ii) DECODE AVC VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL AND NON-COMMERCIAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSED TO PROVIDE AVC VIDEO.

NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION MAY BE OBTAINED FROM MPEG LA, L.L.C. SEE HTTP://WWW.MPEGLA.COM

On GNU GPL/LGPL applied software

The software that is eligible for the following GNU General Public License (hereinafter referred to as “GPL”) or GNU Lesser General Public License (hereinafter referred to as “LGPL”) are included in the camera.
