Digital Still Camera

Operating Instructions
Before operating the unit, please read this manual and the separate sheet “Waterproof specifications” thoroughly, and retain it for future reference.

Owner’s Record
The model and serial numbers are located on the bottom. Record the serial number in the space provided below. Refer to these numbers whenever you call upon your Sony dealer regarding this product.

Model No. DSC-U60
Serial No. ________________

© 2003 Sony Corporation
On the battery charger
To prevent fire or shock hazard, do not expose the unit to rain or moisture.

For the Customers in the U.S.A.

WARNING

On the battery charger
To prevent fire or shock hazard, do not expose the unit to rain or moisture.

If you have any questions about this product, you may call:
Sony Customer Information Services Center
1-800-222-SONY (7669)

The number below is for the FCC related matters only.

Regulatory Information

Declaration of Conformity
Trade Name: SONY
Model No.: DSC-U60
Responsible Party: Sony Electronics Inc.
Address: 680 Kinderkamack Road, Oradell, NJ 07649 U.S.A.
Telephone No.: 201-930-6972
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION
You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

Note:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The supplied interface cable must be used with the equipment in order to comply with the limits for a digital device pursuant to Subpart B of Part 15 of FCC Rules.
CAUTION
TO PREVENT ELECTRIC SHOCK, MATCH WIDE BLADE OF PLUG TO WIDE SLOT, FULLY INSERT.

RECYCLING NICKEL METAL HYDRIDE BATTERIES
Nickel Metal Hydride batteries are recyclable. You can help preserve our environment by returning your used rechargeable batteries to the collection and recycling location nearest you.

For more information regarding recycling of rechargeable batteries, call toll free 1-800-822-8837, or visit http://www.rbrc.org/

CAUTION:
Do not handle damaged or leaking Nickel Metal Hydride batteries.

Notice for the customers in the United Kingdom
A moulded plug complying with BS1363 is fitted to this equipment for your safety and convenience.
Should the fuse in the plug supplied need to be replaced, a fuse of the same rating as the supplied one and approved by ASTA or BSI to BS1362. (i.e., marked with ⬜️ or ⬜️ mark) must be used.
If the plug supplied with this equipment has a detachable fuse cover, be sure to attach the fuse cover after you change the fuse. Never use the plug without the fuse cover. If you should lose the fuse cover, please contact your nearest Sony service station.

Attention for the Customers in Europe
This product has been tested and found compliant with the limits sets out in the EMC Directive for using connection cables shorter than 3 meters (9.8 feet).

Attention
The electromagnetic fields at the specific frequencies may influence the picture of this camera.

Notice
If static electricity or electromagnetism causes data transfer to discontinue midway (fail), restart the application or disconnect and connect the USB cable again.

Certain countries may regulate disposal of the battery used to power this product. Please consult with your local authority.

“Memory Stick”

For the Customers in the U.S.A. and Canada

THIS DEVICE COMPLIES WITH PART 15 OF THE FCC RULES. OPERATION IS SUBJECT TO THE FOLLOWING TWO CONDITIONS:
(1) THIS DEVICE MAY NOT CAUSE HARMFUL INTERFERENCE, AND
(2) THIS DEVICE MUST ACCEPT ANY INTERFERENCE RECEIVED, INCLUDING INTERFERENCE THAT MAY CAUSE UNDESIRABLE OPERATION.

THIS CLASS B DIGITAL APPARATUS COMPLIES WITH CANADIAN ICES-003.
Before using your camera

Notes on waterproof performance

- This camera conforms to IEC60529 IPX6* and IPX7**, and can be used in places exposed to splashing water or underwater up to depths of 1.5 m (5 feet).

  * Water shall not enter the interior even when exposed to direct jet streams of water (normal temperature fresh water) from any direction.

  ** Water shall not seep into the interior even when left submerged in normal temperature fresh water at a depth of 1 m (3 feet 3 1/4 inches) in a stationary condition for approximately 30 minutes.

- You can use this camera in the following places: underwater (ocean, swimming pools) up to depths of 1.5 m (5 feet), beachside, riverside, poolside, ski slopes, in the rain, etc.

- Do not use this camera in the following places: places where the camera might be subject to high water pressure, hot springs or bathtubs, etc.

- This camera does not float in water.

- Before opening the waterproof cover, be sure to rinse off any sand and completely wipe away any water that may be present on the camera body.

- Should you find any evidence of water leaks inside the waterproof cover, stop using the camera at once and contact your Sony dealer or local authorized Sony service facility.

- Sony cannot be held responsible for malfunctions or irreparable problems arising from water or foreign objects entering the inside of the camera due to improper handling.

- Note that waterproof performance is not guaranteed under all environments and conditions.

Trial recording

Before you record one-time events, you may want to make a trial recording to make sure that the camera is working correctly.

No compensation for contents of the recording

Contents of the recording cannot be compensated for if recording or playback is not possible due to a malfunction of your camera or recording media, etc.

Back up recommendation

To avoid the potential risk of data loss, always copy (back up) data to a disk.

Notes on use

- Before using this camera underwater or in places exposed to water, be sure to inspect the O-ring and the O-ring mating surface on the inside of the camera.

- Do not immerse the camera in water containing soap, detergent, bath salts, etc., or in hot water with a temperature of more than 30°C.

- Never open the waterproof cover underwater or in places exposed to water. Lock the lock switch to prevent the waterproof cover from opening by accident.

Notes on image data compatibility

- This camera conforms with the Design rule for Camera File system universal standard established by the JEITA (Japan Electronics and Information Technology Industries Association).

- Playback of images recorded with your camera on other equipment and playback of images recorded or edited with other equipment on your camera are not guaranteed.

Note on “Memory Stick”

This camera turns off when you open the inner cover. Do not open the inner cover while the access lamp is lit.

Precaution on copyright

Television programs, films, video tapes, and other materials may be copyrighted. Unauthorized recording of such materials may be contrary to the provision of the copyright laws.

Do not shake or strike the camera

In addition to malfunctions and inability to record images, this may render the “Memory Stick” unusable or image data breakdown, damage or loss may occur.
LCD screen, LCD finder (only models with an LCD finder) and lens

- The LCD screen and the LCD finder are manufactured using extremely high-precision technology so over 99.99% of the pixels are operational for effective use. However, there may be some tiny black points and/or bright points (white, red, blue or green in color) that constantly appear on the LCD screen and the LCD finder. These points are normal in the manufacturing process and do not affect the recording in any way.
- Be careful when placing the camera near a window or outdoors. Exposing the LCD screen, the LCD finder or the lens to direct sunlight for long periods may cause malfunctions.
- Do not press the LCD screen hardly. The screen may be uneven and that may cause a malfunction.
- Images may be trailed on the LCD screen in a cold location. This is not a malfunction.

Clean the flash surface before use

The heat of flash emission may cause dirt on the flash surface to become discolored or to stick to the flash surface, resulting in insufficient light emission.

On humidity and moisture condensation

If moisture condensation occurs, see page 75 and follow the instructions on how to remove it before using the camera.

Note on the camera locations

Do not use the camera near a location that generates strong radio wave or emits radiation. The camera may not be able to record or play back properly.

The pictures used in this manual

The photographs used as examples of pictures in this manual are reproduced images, and are not actual images shot using this camera.

How to hold the camera

When shooting an image with the camera, be careful not to obstruct the flash or the lens with your fingers.

Check the LCD screen to make sure the image is level.

Preparing batteries

Use the following batteries in this camera.

**Acceptable batteries**

HR11/45: HR03 (size AAA) Nickel-Metal Hydride batteries (2)
- NH-AAA-DA (2) (supplied)
- NH-AAA-2DA twin-pack (not supplied)

**Batteries that cannot be used**

Manganese batteries, lithium batteries, Ni-Cd batteries, alkaline batteries

- When the above batteries are used, operation is not guaranteed due to possible voltage drops or other characteristics of the batteries.
- In addition, the battery remaining indicator is not displayed correctly.

Charging the batteries

1. Insert Nickel-Metal Hydride batteries into the battery charger (supplied) with the correct polarity +/–.
2. Connect the battery charger to a wall outlet (wall socket) using the power cord (mains lead).

- You cannot use any battery other than a Nickel-Metal Hydride battery. Also, operations are not guaranteed when using a Nickel-Metal Hydride battery from a manufacturer other than Sony.
- Be sure to charge the Nickel-Metal Hydride batteries supplied with your camera before using them for the first time.
- Connect the battery charger to an easily accessible wall outlet (wall socket) close by.
- Even if the CHARGE lamp is not lit, the battery charger is not disconnected from the AC power source (mains) as long as it is connected to the wall outlet (wall socket). If some trouble occurs while using the battery charger, immediately shut off the power by disconnecting the plug from the wall outlet (wall socket).

The CHARGE lamp lights up when charging begins, and goes off when charging is completed.

For details on the supplied battery charger, see page 79.

- When charging is finished, disconnect the power cord (mains lead) from the wall outlet (wall socket), and remove the Nickel-Metal Hydride batteries from the battery charger.
Getting started

Charging time

<table>
<thead>
<tr>
<th>Nickel-Metal Hydride battery</th>
<th>Charging time</th>
</tr>
</thead>
<tbody>
<tr>
<td>NH-AAA-DA × 2 (supplied)</td>
<td>Approx. 6 hours</td>
</tr>
</tbody>
</table>

This represents the time required to charge fully depleted Nickel-Metal Hydride batteries using the supplied battery charger in an environment where the ambient temperature is 25°C (77°F).

- It takes about six hours to completely charge the batteries. The CHARGE lamp may remain lit longer than six hours, but this is not a malfunction.
- If you use the BC-CSQ2 battery charger supplied with the STAMINA “Super Quick charge” kit (not supplied), the batteries will charge faster.

Charging time for Size AAA Nickel-Metal Hydride batteries
2 batteries: Approx. 1 hour 25 minutes
4 batteries: Approx. 2 hours 50 minutes

Notes on the Nickel-Metal Hydride batteries

- If the poles of the Nickel-Metal Hydride batteries are dirty, the batteries may not charge properly. Occasionally clean the poles of the batteries and the terminals of the charger by wiping them with a dry cloth.
- Always use the supplied case when transporting the Nickel-Metal Hydride batteries. If the positive and negative terminals come into contact with metallic material and are shorted, the batteries could overheat or catch fire.
- At the time of purchase, or when the Nickel-Metal Hydride batteries have not been used for a long time, they may not fully charge. This is typical of this type of battery, and is not a malfunction. If this happens, repeatedly using up the batteries fully, and then charging them, should correct the problem.
- Even when Nickel-Metal Hydride batteries are not being used they lose their charge naturally over time. It is recommended that you recharge the batteries just before using them.
- If you recharge Nickel-Metal Hydride batteries before fully using up the existing charge, the low battery warning may be displayed sooner than expected. This is called the “memory effect.”* If this problem occurs, charging the batteries only after using up the existing charge will correct it.

* The “memory effect” – the situation in which the capacity of the battery is temporarily lowered.

- Do not peel off the external seals or damage the batteries. Never use batteries from which the seals have been partially or completely removed, or batteries that have been split in any way. These may cause leakage, explosion, or heat-up of the battery, and personal scald or injury may be caused. These may cause a malfunction of the battery charger.
Inserting the batteries

1. Slide the lock switch and the OPEN button in the direction of the arrow and open the waterproof cover.

   The waterproof cover opens toward you.

   - **Before opening the waterproof cover, be sure to rinse off any sand and completely wipe away any water that may be present on the camera body.**
   - Never open the waterproof cover underwater or in places exposed to water, as this may allow water to enter the inside of the camera and cause a malfunction.
   - Immediately after the camera is brought from a warm place to a cold place such as from indoors to outdoors, the difference in pressure between the inside of the camera and the outside air may make it difficult to open the waterproof cover.

2. Slide the inner cover in the direction of the arrow to open it.

   The inner cover opens toward you when you slide it in the direction of the arrow.

3. Insert the batteries.

   Match the +/- poles of the batteries to the +/- marks inside the battery case.

   - From time to time, use a dry cloth to wipe any dirt off of the battery terminals and the contacts inside the inner cover. Skin oil and other dirt on the battery terminals and contacts can significantly shorten the operating time provided by the batteries.
Close the inner cover and slide it in the direction of the arrow to lock it.

Close the inner cover while holding the batteries in. Make sure the cover is closed securely.

To remove the batteries
Perform steps 1 and 2 and remove the batteries.

- Be careful not to drop the batteries when opening or closing the inner cover.

Inspect the waterproof cover.
Inspect the O-ring and the O-ring mating surface for scratches, deformation, dirt, hair or other problems.

- Note that if the O-ring and the O-ring mating surface are damaged, dirty or have other problems, the waterproof performance may be impaired. In this case, water may enter the inside of the camera and cause irreparable damage.
- Replace the O-ring with a new one if it becomes scratched or deformed, or after approximately two years of use even if there are no problems (page 81).

Close the waterproof cover.
Close the waterproof cover and slide the slide lock lever back into place until the OPEN button clicks.

- When using the camera underwater or in places exposed to water, slide the lock switch (page 9) to lock the waterproof cover. This prevents the waterproof cover from opening by accident.
Battery remaining indicator
(When using Nickel-Metal Hydride batteries)

As the battery power decreases with use, the battery remaining indicator displays the amount of power remaining using the following symbols.

<table>
<thead>
<tr>
<th>Battery remaining indicator</th>
<th>Battery remaining guidelines</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Sufficient power remaining</td>
</tr>
<tr>
<td></td>
<td>Battery half full</td>
</tr>
<tr>
<td></td>
<td>Battery low, recording/ playback will stop soon.</td>
</tr>
<tr>
<td></td>
<td>Change the batteries for fully charged ones, or charge these batteries. (The warning indicator flashes.)</td>
</tr>
</tbody>
</table>

- If the LCD screen display is off, set [DISPLAY] in [ ] to [ON].
- Based on the conditions under which the camera is being used and the state of the charge, or on the environment, this information may not be correctly indicated.
- The battery remaining indicator is not displayed in USB connecting.

Battery life and number of images that can be recorded/viewed

The tables show the approximate battery life and the number of images that can be recorded/viewed with fully charged batteries at a temperature of 25°C (77°F) in auto adjustment mode. The numbers of images that can be recorded/viewed take into account changing the supplied “Memory Stick” as necessary. Note that the actual numbers may be less than indicated depending on the conditions of use.

<table>
<thead>
<tr>
<th>Image size</th>
<th>NH-AAA-DA (2) (supplied)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Battery life (min.)</td>

</tr>
</tbody>
</table>

1) Shooting in the following situations:
- Shooting one time every 30 seconds
- The flash strobes once every two times
- The power turns on and off once every ten times.

Viewing still images

2) Viewing single images in order at about 3-second intervals with [LCD LIGHT] set to [ON]

<table>
<thead>
<tr>
<th>NH-AAA-DA (2) (supplied)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery life (min.)</td>
</tr>
<tr>
<td>Continuous recording</td>
</tr>
<tr>
<td>LCD LIGHT</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

3) The maximum shooting time is 15 seconds.

- The remaining indicator will decrease in the following situations:
  - The surrounding temperature is low
  - The flash is used
  - The camera has been turned on and off many times
  - [LCD LIGHT] is set to [ON]
  - The battery capacity decreases as you use it more and more and as time passes (page 78).
Using your camera abroad

Power sources
You can use your camera in any country or region with the supplied battery charger within 100 V to 240 V AC, 50/60 Hz. Use a commercially available AC plug adaptor [a], if necessary, depending on the design of the wall outlet (wall socket) [b].

- Do not use an electronic transformer (travel converter), as this may cause a malfunction.

Turning on/off your camera

Press POWER to turn on the power.
The POWER lamp (green) lights up and the power is on. When you turn on your camera for the first time, the DATE NOTATION screen appears on the LCD screen (page 16).

To turn off the power
Press POWER again. The POWER lamp goes out, and the camera turns off.

Auto power-off function
If you do not operate the camera for about three minutes, the camera turns off automatically to prevent wearing down the batteries. However, the auto power-off function will not operate when the camera is connected to a computer with the USB cable.
How to use the buttons

To change the current settings of the camera, bring up the menu, and use the control buttons to make the changes. For each item, press MENU to display the menu and press the control buttons ▲/▼ to select the desired value, then press EXEC to make the setting.

Press MENU, then the menu disappears from the LCD screen.

Press the buttons MENU, Control buttons, EXEC.

Setting the date and time

Press POWER to turn on the power.

The POWER lamp (green) lights up and the DATE NOTATION screen appears on the LCD screen.

1. Select the desired date display format with the control buttons ▲/▼, then press EXEC.

Select from [Y/M/D] (year/month/day), [M/D/Y] (month/day/year) or [D/M/Y] (day/month/year). Then DATE&TIME SET screen appears on the LCD screen.

2. If the rechargeable button battery, which provides the power for saving the time data, is ever fully discharged (page 76), the DATE NOTATION screen will appear again. When this happens, reset the date and time, by starting from step 2.

3. When the setting is complete, press MENU so that the CLOCK SET screen disappears from the LCD screen.

4. This operation is available no matter what position the mode switch is in.

1. To change the date and time, press MENU and select [DATE&TIME SET] in [CLOCK SET] under [-] (page 73), then perform step 3.

2. If the rechargeable button battery, which provides the power for saving the time data, is ever fully discharged (page 76), the DATE NOTATION screen will appear again. When this happens, reset the date and time, by starting from step 2.
→ Set the numeric value with the control buttons ▲/▼, then press EXEC.

The item to be set is indicated with ▲/▼. After entering the number, ▲/▼ moves to the next item. Repeat this step until all of the items are set.

• If you selected [D/M/Y] in step 2, set the time on a 24-hour cycle.

→ Select [OK] with the control button ▲, then press EXEC.

The date and time are entered and the clock starts to keep time.

• If you make a mistake, select [CANCEL] in step 4 to display the DATE NOTATION screen, then repeat the procedure from step 2.
• To cancel the date and time setting, select [CANCEL], then press EXEC.
Inserting and removing a “Memory Stick”

1. Slide the lock switch and the OPEN button in the direction of the arrow and open the waterproof cover.

   The waterproof cover opens toward you.

2. Slide the inner cover in the direction of the arrow to open it.

   The inner cover opens toward you when you slide it in the direction of the arrow.

3. Insert the “Memory Stick.”

   Holding the “Memory Stick” as shown in the illustration, insert it all the way in until it clicks.

   - Push the “Memory Stick” all of the way in so that it is securely seated in the connector. If the “Memory Stick” is not inserted correctly, you may not be able to record or display images in the “Memory Stick.”
   - Be careful not to drop the batteries when opening or closing the inner cover.

   For details on the “Memory Stick,” see page 76.

   Before opening the waterproof cover, be sure to rinse off any sand and completely wipe away any water that may be present on the camera body.

   Never open the waterproof cover underwater or in places exposed to water, as this may allow water to enter the inside of the camera and cause a malfunction.

   Immediately after the camera is brought from a warm place to a cold place such as from indoors to outdoors, the difference in pressure between the inside of the camera and the outside air may make it difficult to open the waterproof cover.
Close the inner cover and slide it in the direction of the arrow to lock it. Make sure the cover is closed securely.

To remove a “Memory Stick”
Perform steps 1 and 2, and push the “Memory Stick” to pop it out. When doing so, be careful not to drop the “Memory Stick.”

- When the access lamp is lit up, it means that image data is being read or written. Never open the inner cover or turn off the power at this time, as the data may be damaged.

---

Inspect the waterproof cover.
Inspect the O-ring and the O-ring mating surface for scratches, deformation, dirt, hair or other problems.

- Note that if the O-ring and the O-ring mating surface are damaged, dirty or have other problems, the waterproof performance may be impaired. In this case, water may enter the inside of the camera and cause irreparable damage.
- Replace the O-ring with a new one if it becomes scratched or deformed, or after approximately two years of use even if there are no problems (page 81).

Close the waterproof cover.
Close the waterproof cover and slide the slide lock lever back into place until the OPEN button clicks.

- When using the camera underwater or in places exposed to water, slide the lock switch (page 9) to lock the waterproof cover. This prevents the waterproof cover from opening by accident.
Setting the still image size

1. Set the mode switch to , and turn on the power, then press MENU.

The menu appears on the LCD screen.

2. Select [ ] with the control button ▲, then press EXEC. Select [SIZE·BURST] with the control buttons ▲/▼, then press EXEC.

The image size is displayed.

- For details on the image size, see page 21.

3. Select the desired image size with the control buttons ▲/▼, then press EXEC.

The image size is set.
When the setting is complete, press MENU so that the menu disappears from the LCD screen.

- The image size selected here is maintained even when the power is turned off.
You can choose the image size (number of pixels) according to the kind of images you want to shoot. The larger you make the image size, the better your image, but also the larger the amount of data needed to preserve your image. This means you can save fewer images in your “Memory Stick.” Choose an image size appropriate for the kind of images you want to shoot. You can choose from the following table. The below image size is a minimum setting for examples.

<table>
<thead>
<tr>

</table>

- When the images recorded using earlier Sony models are played back, the image size indication may be different from the actual image size.
- Images viewed on the LCD screen of the camera all appear the same size.
- The actual number of images may differ depending on the shooting conditions.
- When the number of remaining shooting images is greater than 9999, >9999 indicator appears on the LCD screen.
Basic still image shooting — Using auto adjustment mode

➡️ Set the mode switch to  
, and turn on the power.

The name of the folder where the image will be recorded appears on the LCD screen for approximately five seconds.

• [FOCUS] is set to [AUTO] at the factory.
• The exposure is automatically adjusted.
• This camera can create new folders and select folders to be stored in the “Memory Stick” (page 26).

➡️ Hold the camera steadily with a hand and position the subject in the center of the LCD screen.

Do not cover the lens or flash with your fingers.

• Check the LCD screen to make sure the image is level.
• When recording outdoors during clear weather or under other intense light, undesired light (ghosting) may enter the screen. If this happens, shade the lens with your hand or other object while recording.
• The exposure and focus are adjusted to the center of the LCD screen.

➡️ Press and hold the shutter button halfway down.

A beep sounds. When the AE/AF lock indicator changes from flashing to lighted up, the camera is ready for shooting.

• If you release the shutter button, the recording will be canceled.
• When the camera does not beep, the AF adjustment is not complete. You can continue to shoot, but the focus is not adjusted properly.
• This camera employs an auto-macro AF function. The minimum focal distance to the subject is 10 cm (4 inches) (or 15 cm (6 inches) underwater).
Press the shutter button fully down.

A beep sounds. When “RECORDING” disappears from the LCD screen, recording is complete. The image will be recorded in the “Memory Stick,” and you can shoot the next image.

- If you do not operate the camera for about three minutes during recording or playback, the camera turns off automatically to prevent wearing down the batteries (page 15).

Auto Focus

When you try to shoot a subject that is difficult to focus on, the AE/AF lock indicator changes to flashing slowly. The Auto Focus function may have difficulty working under the following conditions. In such cases, release the shutter button, then recompose the shot and focus again. If the Auto Focus function can still not bring the subject into focus, use the Focus preset function (page 32).

- The subject is distant from the camera and dark.
- The contrast between the subject and its background is poor.
- The subject is seen through glass, such as a window.
- A fast-moving subject.
- The subject reflects or has a lustrous finish, such as a mirror or a luminous body.
- A flashing subject.
- A backlit subject.

LCD light

You can use [LCD LIGHT] under [ ] with MENU and the control buttons ▲▼ to turn the LCD light on and off. This is useful for extending the battery life.

- This camera is equipped with a Hybrid-type LCD screen that allows you to see the LCD screen even when the LCD light is turned off, as long as there is some ambient illumination.
- Even if the LCD light setting is [OFF], the LCD light will turn on when menu operations are being performed. When the menu operation is completed, the LCD light will turn off again.
Using the self-timer

LCD screen display during shooting
You can use [DISPLAY] under [ ] with MENU and the control buttons ▲/▼ to turn the display on and off. This is useful when recording under conditions where it is difficult to check the image on the LCD screen.

When [DISPLAY] is [ON]

When [DISPLAY] is [OFF]

- For detailed descriptions of the indicators, see page 83.
- Indicators on the LCD screen are not recorded.

1. Set the mode switch to , and press MENU.

   The menu appears on the LCD screen.

   - You can also carry out this operation when the mode switch is set to .

2. Select [ ] with the control button ▲, then press EXEC. Select [SELFTIMER] with the control buttons ▲/▼, then press EXEC.

   - When the mode switch is set to , select [ ] with the control button ▲.
Shooting still images

Select [ON] with the control button ▲, then press EXEC.

When you press MENU, the menu disappears and the (self-timer) indicator appears on the LCD screen.

- When placing the camera in a standing position, make sure the LCD screen is level.

Center the subject in the LCD screen and press the shutter button fully down.

The self-timer lamp flashes red and a continuous beep sounds. The image will be shot after approximately 10 seconds.

To cancel the self-timer in the middle of the operation
Press POWER to turn off the power.

- If you press the shutter button while standing in front of the camera, the focus and the exposure may not be correctly set.

Selecting a flash mode

Set the mode switch to , and press the control button ▲ (שיר) repeatedly to select a flash mode.

Each time you press ▲ (שיר), the indicator changes as follows.

No indicator (Auto): Based on the lighting conditions, the camera will decide if there is enough light, and will use the flash accordingly.

(Flash mode): Flash mode is set to Auto, and the red-eye reduction operates if the flash strobes.

(Forced flash): The flash strobes regardless of the surrounding brightness.

(No flash): The flash does not strobe.
• You cannot use the flash in the Burst mode.
• If the menu is currently displayed, press MENU first so that the menu disappears.
• The recommended shooting distance using the flash is approximately 0.5 m to 1.9 m (1 foot 7 3/4 inches to 6 feet 2 3/4 inches).
• When using the Auto, \(\text{\text{Red-eye reduction}}\) or \(\text{\text{Forced flash}}\) mode, you may notice some noise in the image when you look at the LCD screen in a dark place, but this will have no effect on the shot image.
• When using the \(\text{\text{No flash}}\) mode, the shutter speed becomes slower in dark places, so using a tripod is recommended.
• While charging the flash, the \(\text{\text{Flash charge}}\) lamp flashes. After the charging is complete, the lamp goes out.
• This setting is maintained even when the power is turned off.

Red-eye reduction
The flash pre-strobes before shooting to reduce the red-eye phenomenon. The \(\text{\text{Red-eye reduction}}\) indicator appears on the LCD screen.

- Red-eye reduction may not produce the desired effects depending on individual differences, the distance to the subject, if the subject does not see the pre-strobe, or other conditions.

Creating or selecting a folder
Your camera can create multiple folders in a “Memory Stick.” Also, you can select the folder used to store images.
When not creating a new folder, “101MSDCF” folder is selected as the recording folder.
You can create folders up to “999MSDCF.”
- Up to 4000 images can be stored in one folder. When the folder capacity is exceeded, a new folder is automatically created.
Creating a new folder

1. Set the mode switch to 📸, then press MENU.

   The menu appears on the LCD screen.

   - You can also carry out this operation when the mode switch is set to 🖼.

2. Select [ ] with the control button ▼, then press EXEC.

3. Select [CREATE FOLDER] with the control buttons ▲/▼, then press EXEC.

   The CREATE REC. FOLDER screen appears.

   - Once you create a new folder, you cannot delete the new folder with the camera.
   - Images are recorded in the newly created folder until a different folder is created or selected.

4. Select [OK] with the control button ◀, then press EXEC.

   A new folder is created with a number one higher than the largest number in the “Memory Stick,” and the folder becomes the recording folder.

   When you press MENU, the menu disappears and the created folder is displayed.

To cancel folder creation
Select [CANCEL] in step 3.
Selecting the recording folder

1. Set the mode switch to [ ], then press MENU.

   The menu appears on the LCD screen.

   - You can also carry out this operation when the mode switch is set to [ ].

2. Select [ ] with the control button ▼, then press EXEC.

   Select [CHANGE FOLDER] with the control button ▼, then press EXEC.

   The CHANGE REC. FOLDER screen appears.

   You cannot select the “100MSDCF” folder as a recording folder.

   The image is stored in the newly selected folder. You cannot move recorded images to a different folder with this camera.
Select [OK] with the control button ▲, then press EXEC.

When you press MENU, the menu disappears and the selected folder is displayed.

To cancel changing the recording folder
Shooting according to scene conditions — Scene Selection

When shooting underwater, moving subjects, portraits, people at night, night scenes, or landscapes, use the modes below to improve the quality of your images.

**Underwater mode**

This mode is used when shooting underwater where there is sunlight (up to depths of 1.5 m (5 feet)). The white balance is automatically adjusted to the appropriate setting to enable impressive underwater photographs of your subjects.

- When the camera is suddenly brought from a warm place into cold water, the lens may cloud. Allow the camera to adapt to the underwater temperature beforehand.
- When using underwater, see “Before using your camera” on page 4, “Precautions” on page 74 and “On the O-ring” on page 79 before use.

**Active outdoor mode**

This mode lets you stop the movement of your subject and get lively shots of fast-moving objects in bright outdoor conditions.

- When setting the focus to [AUTO], the focus is adjusted to approximately 1 m to ∞ (infinite).

**Soft snap mode**

This mode lets you shoot skin colors in brighter and warmer tones for more beautiful pictures. In addition, the soft focus effect creates a gentle atmosphere for portraits of people, flowers, etc.

**Illumination snap mode**

This mode lets you capture beautiful images of both subjects and night scene backgrounds at the same time. In addition, the cross filter effect enhances street lamps or other lights with cross-shaped rays.

- Note that as shutter speeds decrease, shaking increases.
- The flash strobes in red-eye reduction mode.
- When setting the focus to [AUTO], the focus is adjusted to approximately 1 m to ∞ (infinite). To record subjects closer than 1 m, use the Focus preset (page 32).
Twilight mode
This mode lets you shoot night scenes at far distances without losing the dark atmosphere of the surroundings.

- Note that as shutter speeds decrease, shaking increases.
- The focus setting changes to [ ].
- The flash cannot be used in this mode.
- When the focus setting is set to [AUTO], the focus is adjusted to telephoto.

Vivid nature mode
This mode enhances blues and greens such as the sky, ocean and mountains, letting you shoot natural landscapes with vivid, striking colors.

- The focus setting changes to [ ].
- The flash cannot be used in this mode.
- When the focus setting is set to [AUTO], the focus is adjusted to telephoto.

Set the mode switch to [ ], and press the control button [ ) (SCENE) repeatedly to select a desired mode.

To cancel Scene Selection
Press [ ) (SCENE) repeatedly to set to No indicator (Auto).

- If the menu is currently displayed, press MENU first so that the menu disappears.
- You cannot use the Scene Selection when shooting movies.
- The setting selected here is not maintained when the power is turned off.
Setting the distance to the subject — Focus preset

When shooting an image using a previously set distance to the subject, or when shooting a subject through a net or window glass, it is difficult to achieve a proper focus using the auto focus function. The Focus preset is useful in these cases.

- When shooting underwater, select the underwater mode for the Scene Selection function (page 30).

1. ➔ Set the mode switch to [ ], and press MENU.

The menu appears on the LCD screen.

- You can also carry out this operation when the mode switch is set to [ ].

2. ➔ Select [ ] with the control button ▲, then press EXEC. Select [FOCUS] with the control buttons ▲/▼, then press EXEC.

- When the mode switch is set to [ ], select [ ] with the control button ▲.
- Focus setting information is approximate, and should be used as a reference.
Shooting five images continuously — Burst

1. Set the mode switch to [ ], and press MENU.

   The menu appears on the LCD screen.

   • You cannot use the flash in this mode.
   • You can shoot up to five images in succession by holding down the shutter button. If you release the shutter button before all five images are shot, the camera stops shooting as soon as you release the button.
   • The recording interval is approximately 0.5 seconds. However, the recording interval may be longer in the Illumination snap mode or the Twilight mode.

2. Select [ ] with the control button ▲, then press EXEC.

3. Select the desired focus setting with the control buttons ▲/▼, then press EXEC.

   You can select from the following distance settings:
   AUTO (No indicator), 0.2 m, 0.5 m, 1.0 m, and (infinity)

   When you press MENU, the menu disappears and the indicator is displayed on the LCD screen.

   To return to auto focus mode
   Select [AUTO] in step 3.

   • The setting selected here is not maintained when the power is turned off.
Select [BURST] with the control button ▼, then press EXEC.

Press MENU so that the menu disappears from the LCD screen.

Press the shutter button halfway down, then hold the shutter button fully down.

Up to five images are recorded as long as you hold down the shutter button. The images are recorded in VGA size.

- If you release the shutter button before the camera records five images, only the images that were shot while the shutter button was held down are recorded.

Adding special effects — Picture Effect

You can digitally process images to obtain special effects.

NEG. ART

The color and brightness of the picture are reversed as in a negative.

SEPIA

The picture is sepia-toned like an old photograph.

B&W

The picture is monochrome (black and white).

SOLARIZE

The light contrast is clearer and the picture looks like an illustration.
Set the mode switch to , and press MENU.

The menu appears on the LCD screen.

- You can also carry out this operation when the mode switch is set to .

Select [ ] with the control button \( \uparrow \), then press EXEC. Select [P.EFFECT] with the control button \( \downarrow \), then press EXEC.

- When the mode switch is set to , select [ ] with the control button \( \uparrow \).

Select the desired mode with the control buttons \( \uparrow/\downarrow \), then press EXEC.

When you press MENU, the menu disappears and the selected mode is displayed on the LCD screen.

**To cancel Picture Effects**
Select [OFF] in step 3.

- The setting selected here is not maintained when the power is turned off.
You can view images shot with your camera almost immediately on the LCD screen. You can select the following two methods for viewing images.

**Single (single-image) screen**
You can view one image at a time, displayed over the entire screen.

**Index (four-image) screen**
Four images are displayed simultaneously in separate panels on the screen.

- For detailed descriptions of the screen indicators, see page 84.
- For details on viewing movies, see page 44.

**Viewing single images**

1. Set the mode switch to , and turn on the power.

The last image in the selected recording folder (page 28) appears on the LCD screen.

2. Select the desired still image with the control buttons ▲/▼.

▲: To display the preceding image
▼: To display the next image
Viewing an index screen (four-image)

1 Set the mode switch to , and press MENU.

The menu appears on the LCD screen.

2 Select [ ] with the control button ▲, then press EXEC. Select [INDEX] with the control buttons ▲/▼, then press EXEC.

The display switches to the index (four-image) screen.

To display the next (previous) index screen
Press the control buttons ▲/▼ to move the yellow border.

To return to the single-image screen
Select [SINGLE] in step 2, or press EXEC to display the single image shown with the yellow border when four frames are displayed.
Selecting the folder and playing back images — Folder

1. ➞ Set the mode switch to , then press MENU.

The menu appears on the LCD screen.

2. ➞ Select [ ] with the control button ▼, then press EXEC. Select [CHANGE FOLDER] with the control buttons ▲/▼, then press EXEC.

The CHANGE FOLDER screen appears.

3. ➞ Select the desired folder with the control buttons ▲/▼, then press EXEC.
Viewing still images

Select [OK] with the control button ▲, then press EXEC.

When you press MENU, the menu disappears and the selected folder is displayed.

To cancel the selection

When multiple folders are created in the “Memory Stick”
When the first or last image in the folder is displayed, the following indicators appear on the LCD screen.

▲: Moves to the previous folder.
▼: Moves to the next folder.
▲▼: Moves to both the previous and next folders.

When multiple folders are created in the “Memory Stick”

Single (single-image) screen

Index (four-image) screen

- When no images are stored in the folder, “NO FILE IN THIS FOLDER” appears.
- You can play back images from the last-shot one without selecting the folder.
Enlarging an image — Enlarged playback

You can zoom in on an image shot with your camera to enlarge it to 2.5 or 5 times the original size.

1× (normal) 2.5× 5×

1:30 PM 101-0007 2003 7 4

10× 2.0 M

Set the mode switch to , and select the image you want to enlarge with the control buttons ▲/▼.

- Enlarged playback does not function for movies.
- You may not be able to enlarge images recorded using other devices.
- The enlarged image cannot be recorded as a new file.

Press EXEC (Q) repeatedly to select the desired enlargement level.

The center of the screen is enlarged. Each time you press EXEC (Q), the enlargement level changes as follows.
2.5× → 5× → No indicator (normal) → ...

To cancel Enlarged playback

Press EXEC (Q) repeatedly to set to No indicator (normal).

- You can only enlarge the center of the screen.
Choosing images to print — Print (DPOF) mark

You can mark still images shot with your camera that you want to have printed. This function is convenient when you have images printed at a shop or using a printer that conforms with the DPOF (Digital Print Order Format) standard.

- You cannot mark movies.

1. Set the mode switch to \( \uparrow \), and display the image you want to print with the control buttons \( \uparrow/\downarrow \).

2. Press MENU, and select \( [\uparrow] \) with the control button \( \uparrow \), then press EXEC.

To mark the print (DPOF) mark in index-image screen
Perform step 2 on page 37 and switch to index screen.
Select [DPOF] with the control button ▼, then press EXEC.

Select [ON] with the control button ▲, then press EXEC.

When you press MENU, the menu disappears and the □ mark is marked on the displayed image.

To unmark the print (DPOF) mark
Select [OFF] in step 4. The □ mark disappears.
**Shooting movies**

1. **Set the mode switch to ** and turn on the power.**

   - Sound cannot be recorded in movies.

2. **Press the shutter button fully down.**

   “REC” appears on the LCD screen and the camera starts recording the image. The maximum recording time is 15 seconds per recording.

   - The auto focus function can set the focus at any distance from approximately 1.0 m to \( \infty \) (infinity). To shoot a subject at a closer distance than 1.0 m, select 0.2 m or 0.5 m with the Focus preset function (page 32).
   - Recording stops when the “Memory Stick” is full.
   - The flash does not function when shooting movies.

3. **To stop recording, press the shutter button fully again.**

**Indicators during shooting**

Indicators on the LCD screen are not recorded. You can use [DISPLAY] under [ ] with MENU and the control buttons \( \uparrow \downarrow \) to turn the display on and off (page 24). For detailed descriptions of the indicators, see page 83.

**To use the self-timer**

Set the mode switch to ** and follow the procedure on page 24.
Shooting time

The shooting time is different, depending on the capacity of the “Memory Stick.” Refer to the following chart when you choose a “Memory Stick.”

- The maximum shooting time is 15 seconds per recording.
- The shooting time may vary, depending on the shooting conditions.
- For numbers of still images that can be recorded, see page 21.
- When shooting time exceeds 99 minutes 59 seconds “>99:59” is displayed.

</table>

Viewing movies on the LCD screen

1. Set the mode switch to , and turn on the power.

The last image in the selected recording folder (page 28) appears on the LCD screen.

2. Select the desired movie with the control buttons ▲/▼.

▲: To display the preceding image
▼: To display the next image
Press EXEC.

The movie is played back.

To stop playback
Press EXEC.

Indicators while viewing movies
Indicators on the LCD screen are not recorded. You can use [DISPLAY] under [ ] with MENU and the control buttons ▲▼ to turn the display on and off (page 24).
For detailed descriptions of the indicators, see page 84.
Deleting images

1. Set the mode switch to 
   and turn on the power. 
   Press the control buttons  
   to select the image you want to delete.

2. Press MENU and select [ ] 
   with the control button 
   then press EXEC.

   To delete an image in index-image screen 
   Perform step 2 on page 37 and switch to index screen.

3. Select [DELETE] with the control buttons  
   then press EXEC.

   The image has not yet been deleted at this point.

   To delete all the images in the folder 
   Select [DELETE IN FOLDER] in step 3.

   • You cannot delete images write-protected by another device.
Deleting images

Select [OK] with the control button ▲, then press EXEC.

When the message “MEMORY STICK ACCESS” disappears, the image has been deleted.

To cancel deleting

Insert the “Memory Stick” you want to format into the camera.

Do not open the inner cover while formatting the “Memory Stick” as this may damage the “Memory Stick.”

- Before opening the waterproof cover, be sure to rinse off any sand and completely wipe away any water that may be present on the camera body.
- Inspect the O-ring and the O-ring mating surface on the inside of the camera for scratches, deformation, dirt, hair or other problems.

Formatting a “Memory Stick”

Turn on the power, and press MENU.

The menu appears on the LCD screen.

- When you format a “Memory Stick,” be sure that sufficient power remains, otherwise a “FORMAT ERROR” may occur.
- This operation is available no matter what position the mode switch is in.
Select [ ] with the control button ▼, then press EXEC. Select [FORMAT] with the control buttons ▲/▼, then press EXEC.

- The term “formatting” means preparing a “Memory Stick” to record images; this process is also called “initialization.” The “Memory Stick” provided with this camera, and those available commercially, are already formatted, and can be used immediately.
- When you format a “Memory Stick,” note that all data in the “Memory Stick,” including images that were write-protected by another device, will be permanently erased.

Select [OK] with the control button ▲, then press EXEC.

When the message “FORMATTING” disappears, the format is complete.

To cancel formatting
Enjoying images on your computer — For Windows users

Recommended computer environment

The above OS must be installed at the factory. Operation is not assured in an environment upgraded to the operating systems described above or in a multi-boot environment.

**CPU:** MMX Pentium 200 MHz or faster

**USB connector:** Provided as standard

**Display:** 800 × 600 dots or more

High Color (16-bit color, 65,000 colors) or more

- If you connect two or more USB equipment to a single computer at the same time, some equipment, including your camera, may not operate depending on the type of USB equipment.
- Operations are not guaranteed when using a USB hub.
- Operations are not guaranteed for all the recommended computer environments mentioned above.

**USB mode**

There are two modes for a USB connection, [NORMAL] and [PTP]* modes. The factory setting is the [NORMAL] mode. This section describes the USB connection using the [NORMAL] mode.

When the camera is connected to your computer via a USB cable, the camera can draw its power from your computer (USB Bus Powered).

* Compatible only with Windows XP. When connected to a computer, only the data in the folder selected by the camera is copied to the computer. To select a folder when the camera is connected to your computer, press MENU and perform the procedures to change a folder for playback.

**Communication with your computer**

When your computer resumes from the suspend or sleep mode, communication between your camera and your computer may not recover at the same time.

**When a USB connector is not provided on your computer**

When neither a USB connector nor a “Memory Stick” slot is provided, you can copy images using an additional device. See the Sony Website for details. http://www.sony.net/

**Contents of the CD-ROM**

**USB Driver**

This driver is needed in order to connect the camera to a computer.
- When using Windows XP, you need not install the USB driver.

**Image Transfer**

This application is used to easily transfer images from the camera to a computer.

**ImageMixer**

This application is used to display and edit images that are stored in a computer.

- This section describes the Windows Me screen as an example. The required operations may differ depending on your OS.
- **Close down all applications running on the computer before installing the USB driver and application.**
- When using Windows XP or Windows 2000, log on as Administrator.
- The display settings should be 800 × 600 dots or more and High Color (16-bit color, 65 000 colors) or more. When set to less than 800 × 600 dots or 256 colors or less, the model selection screen does not appear.
Installing the USB driver

When using Windows XP, you need not install the USB driver. Once the USB driver is installed, you need not install the USB driver again.

1 Start up your computer, and insert the supplied CD-ROM into the CD-ROM drive.

Do not connect your camera to your computer at this time.

The model selection screen appears. If it does not appear, double-click (My Computer) → [ImageMixer] in that order.

2 Click [Cyber-shot] on the model selection screen.

The installing menu screen appears.

3 Click [USB Driver] on the installing menu screen.

The “InstallShield Wizard” screen appears.

4 Click [Next]. When the “Information” screen appears, click [Next].

The USB driver installation starts. When the installation is completed, the screen informs you of completion.

5 Click [Yes, I want to restart my computer now], then click [Finish].

Your computer restarts. Then, you can establish USB connection.

Do not connect your camera to your computer at this time.
Installing “Image Transfer”

You can use the “Image Transfer” software to copy images to your computer automatically when you connect the camera to your computer with the supplied USB cable.

1. Click [Cyber-shot] on the model selection screen.

   ![Image Transfer software interface]

   The installing menu screen appears.

2. Click [Image Transfer] on the installing menu screen.
   Select the desired language, then click [OK].

   ![Choose Setup Language screen]

   The “Welcome to the InstallShield Wizard” screen appears.

   • This section describes the English screen.

3. Click [Next]. When the “Licence Agreement” screen appears, click [Yes].

   ![Licence Agreement screen]

   Read the agreement carefully. If you accept the terms of the agreement, proceed with the installation. The “Information” screen appears.

4. Click [Next].

   ![Information screen]

5. Select the folder to be installed, then click [Next].
   Select the program folder, then click [Next].

   ![Select Program File screen]

6. Confirm that the checkbox is checked on the “Image Transfer Settings” screen, then click [Next].

   ![Image Transfer Settings screen]

   When the installation is completed, the screen informs you of completion.
7 Click [Finish].

The “InstallShield Wizard” screen closes. If you wish to continue with the installation of “ImageMixer,” click [ImageMixer] on the installing menu screen and then follow the instructions that appear on the screen.

- The USB driver is needed in order to use “Image Transfer.” If the necessary driver is not already installed on your computer, a screen that asks if you want to install the driver will appear. Follow the instructions that appear on the screen.

1 Click [ImageMixer] on the installing menu screen. Select the desired language, then click [OK].

The “Welcome to the InstallShield Wizard” screen appears.

- This section describes the English screen.

2 Follow the instructions on each succeeding screen.

Install “ImageMixer” according to the instructions that appear on the screen.

- When you use Windows 2000 or Windows XP, install “WinASPI.”
- If DirectX8.0a or a later version is not installed in your computer, the “Information” screen appears. Follow the instructions that appear on the screen.

3 Restart your computer according to the instructions that appear on the screen.

4 Remove the CD-ROM.
Connecting the camera to your computer

1. Insert the “Memory Stick” with the images you want to copy into the camera, then close the inner cover.

- The camera can receive power supply from most of the computers that are recommended for use through the USB connection (USB Bus Powered), so in this case there is no need to insert batteries into the camera.
- Removing the batteries before connecting the camera is recommended in order to prevent battery deterioration.
- For further details on inserting the “Memory Stick,” see page 18.

2. Turn on your computer.

- Note that the power cannot be turned on if a “Memory Stick” is not inserted in the camera.
- When you use a desktop computer, we recommend that you connect the USB cable to the USB connector on the rear panel.
- When using Windows XP, the AutoPlay wizard automatically appears on the desktop. Proceed to page 56.

3. Connect the supplied USB cable to the \( \psi \) (USB) jack of the camera.

- Operations are not guaranteed when using a USB hub. Connect the camera directly to your computer.

4. Connect the USB cable to your computer.

- “USB MODE: NORMAL” appears on the LCD screen of the camera. When a USB connection is established for the first time, your computer automatically runs a program to recognize the camera. Wait for a while.

- During communication, the access indicators turn red.

- If “USB MODE: NORMAL” is not shown in step 4, confirm that [USB] is set to [NORMAL] under [ ] in the menu settings (page 73).
- In USB mode, the POWER button and other controls on the camera do not function.
Disconnecting the USB cable from your computer or removing the “Memory Stick” from your camera during USB connection

For Windows 2000, Me, or XP users
1 Double-click  on the tasktray.
2 Click  (Sony DSC), then click [Stop].
3 Confirm the device on the confirmation screen, then click [OK].
4 Click [OK].
   Step 4 is unnecessary for Windows XP users.
5 Disconnect the USB cable or remove the “Memory Stick.”

For Windows 98 or 98SE users
Confirm that the access indicators (page 53) on the LCD screen are turned white and carry out only Step 5 above.

Copying images using “Image Transfer”
— Windows 98/98SE/2000/Me
Connect the camera and your computer with the USB cable.
“Image Transfer” launches and the images are automatically copied to the computer.

- Normally “Image Transfer” and “Date” folders are created inside the “My Documents” folder, and all of the image files recorded with the camera are copied into these folders.
- You can change the “Image Transfer” settings (page 55).
- When “ImageMixer” (page 52) is installed and image copying is completed using “Image Transfer,” “ImageMixer” automatically launches and images appear.

— Windows XP
Connect the camera and your computer with the USB cable.
“Image Transfer” starts up automatically and the images are automatically copied to the computer.
Windows XP is set so that the OS AutoPlay Wizard activates.
If you want to cancel the setting, follow the procedure below.

1 Click [Start], then click [My Computer].
2 Right-click [Sony MemoryStick], then click [Properties].
3 Cancel the setting.
   ① Click [AutoPlay].
   ② Set [Content type] to [Pictures].
   ③ Check [Select an action to perform] under [Actions], select [Take no action], then click [Apply].
   ④ Set [Content type] to [Video files] and repeat step ③. Then, set [Content type] to [Mixed content] and repeat step ③ again.
   ⑤ Click [OK].
   The “Properties” screen closes.
   The OS AutoPlay Wizard does not start up automatically even if the USB connection is made next time.
**Changing “Image Transfer” settings**

You can change “Image Transfer” settings. Right-click the “Image Transfer” icon on the tasktray, and select [Open Settings]. The settings you can set are as follows: [Basic], [Copy], and [Delete].

When “Image Transfer” starts, the window below appears.

**Copying images without using “Image Transfer”**

— Windows 98/98SE/2000/Me

If “Image Transfer” is not set to launch automatically, you can copy images as following procedure.

1. **Double-click [My Computer], then double-click [Removable Disk].**
   The contents of the “Memory Stick” inserted in your camera appear.
   - This section describes an example of copying images to the “My Documents” folder.
   - When the “Removable Disk” icon is not shown, see the following column.
   - When using Windows XP, see page 56.

2. **Double-click [DCIM], then double-click the folder which contains the desired images.**
   The folder opens.

3. **Drag and drop the image files into the “My Documents” folder.**
   The image files are copied to the “My Documents” folder.
   - When you try to copy an image to a folder in which an image with the same file name is stored, the overwrite confirmation message appears. When you overwrite the existing image with the new one, the original file is deleted.

**When the removable disk icon is not shown**

1. Right-click [My Computer], then click [Properties].
   The “System Properties” screen appears.
2. Confirm if other devices are already installed.
   ① Click [Device Manager].
   ② Confirm if there is a “Sony DSC” with a mark.
3. If you find either of the devices above, follow the steps below to delete them.
   ① Click [Sony DSC].
   - When using Windows 2000, right-click [Sony DSC].
   ② Click [Remove] (or [Uninstall] in Windows 2000).
   The “Confirm Device Removal” screen appears.
   ③ Click [OK].
   The device is deleted.

Try the USB driver installation again using the supplied CD-ROM (page 50).
— Windows XP

Copying images using the Windows XP AutoPlay Wizard

1 Make a USB connection (page 53). Click [Copy pictures to a folder on my computer using Microsoft Scanner and Camera Wizard], then click [OK].

The “Scanner and Camera Wizard” screen appears.

2 Click [Next].

The images stored on the “Memory Stick” are displayed.

3 Click the checkbox of images that you do not want to copy to your computer and remove the checkmark, then click [Next].

The “Picture Name and Destination” screen appears.

4 Select a name and destination for your pictures, then click [Next].

Image copying starts. When the copying is completed, the “Other Options” screen appears.

5 Select [Nothing. I’m finished working with these pictures], then click [Next].

The “Completing the Scanner and Camera Wizard” screen appears.

6 Click [Finish].

The wizard closes.

• To continue copying other images, follow the procedure given under 1 on page 54 to disconnect the USB cable and reconnect it. Then, perform the procedure from step 1 again.

— Windows 98/98SE/2000/Me/XP

Viewing images on your computer

1 Double-click [My Documents] on the desktop.

The “My Documents” folder contents are displayed.

• This section describes the procedure for viewing images copied in the “My Documents” folder.
• When using Windows XP, click [Start] → [My Documents] in that order.
• You can use the “ImageMixer Ver.1.5 for Sony” software to view and edit images on your computer. For details, see the software’s help files.

2 Double-click the desired folder and image file.

The image is displayed.
Image file storage destinations and file names

Image files recorded with your camera are grouped as folders in the “Memory Stick.”

Example: For Windows Me users

<table>
<thead>
<tr>
<th>Folder</th>
<th>File name</th>
<th>File meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>101MSDCF up to 999MSDCF</td>
<td>DSC0□□□□□.JPG</td>
<td>Still image files</td>
</tr>
<tr>
<td></td>
<td>MOV0□□□□□.MPG</td>
<td>Movie files</td>
</tr>
</tbody>
</table>

• Data in the “100MSDCF” or “MSSONY” folders is for playback only, and your camera cannot record images in these folders.
• For more information about the folder, see page 26.
• □□□□□ stands for any number within the range from 0001 to 9999.
Recommended computer environment

**OS:** Mac OS 8.5.1, 8.6, 9.0, 9.1, 9.2, or Mac OS X (v10.0/v10.1/v10.2)
The above OS must be installed at the factory. For the following models, update your OS to Mac OS 9.0, 9.1 or 9.2.
- iMac with Mac OS 8.6 installed at the factory, and a slot loading type CD-ROM drive
- iBook or Power Mac G4 with the Mac OS 8.6 installed at the factory

**USB connector:** Provided as standard

**Display:** 800 × 600 dots or more
- 32,000-color mode or more

- If you connect two or more USB equipment to a single computer at the same time, some equipment, including your camera, may not operate depending on the type of USB equipment.
- Operations are not guaranteed when using a USB hub.
- Operations are not guaranteed for all the recommended computer environments mentioned above.

USB mode

There are two modes for a USB connection, [NORMAL] and [PTP]* modes. The factory setting is the [NORMAL] mode.
This section describes the USB connection using the [NORMAL] mode.
When the camera is connected to your computer via a USB cable, the camera can draw its power from your computer (USB Bus Powered).

* Compatible only with Mac OS X. When connected to a computer, only the data in the folder selected by the camera is copied to the computer. To select a folder when the camera is connected to your computer, press MENU and perform the procedures to change a folder for playback.

Communication with your computer

When your computer resumes from the suspend or sleep mode, communication between your camera and your computer may not recover at the same time.

When a USB connector is not provided on your computer

When neither a USB connector nor a “Memory Stick” slot is provided, you can copy images using an additional device. See the Sony Website for details.
http://www.sony.net/

Steps required by your OS

Follow the steps below, according to your OS.

<table>
<thead>
<tr>
<th>OS</th>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mac OS 8.5.1/8.6/9.0</td>
<td>Steps 1 to 4</td>
</tr>
<tr>
<td>Mac OS 9.1/9.2/ Mac OS X (v10.0/v10.1/v10.2)</td>
<td>Steps 2 to 4</td>
</tr>
</tbody>
</table>
1 Installing the USB driver

1 Turn on your computer, and set the supplied CD-ROM into the CD-ROM drive.
The model selection screen appears.
2 Click [Cyber-shot] on the model selection screen.
The installing menu screen appears.
3 Click [USB Driver].
The “USB Driver” screen appears.
4 Double-click the icon of the hard disk containing the OS to open the screen.
5 Drag and drop the following two files from the screen opened in step 3 into the
System Folder icon in the screen opened in step 4.
   • Sony USB Driver
   • Sony USB Shim
6 When the message for confirmation is shown, click [OK].
7 Restart your computer, then remove the CD-ROM.

2 Connecting your camera to your computer

For details, see page 53.

Disconnecting the USB cable from your computer or removing the “Memory Stick” from your camera during USB connection
Drag and drop the drive icon or the “Memory Stick” icon to the “Trash” icon, then disconnect the USB cable or remove the “Memory Stick.”
   • If you are using Mac OS X v10.0, disconnect the USB cable, etc., after you have turned your computer off.

3 Copying images

1 Double-click the newly recognized icon on the desktop.
The contents of the “Memory Stick” inserted in your camera appear.
2 Double-click [DCIM].
3 Double-click the folder containing the desired image files.
4 Drag and drop the image files to the hard disk icon.
The image files are copied to your hard disk.
   • See page 57 for details about the image file storage destinations and file names.

4 Viewing the images on your computer

1 Double-click the hard disk icon.
2 Double-click the desired image file in the folder containing the copied files.
The image file opens.

   • Close down all applications running on the computer before installing the USB driver and application.
   • You can use the “ImageMixer Ver.1.5 for Sony” software to copy images to your computer and to view images on your computer. See the operation manual supplied with the CD-ROM for details about the installation method, or see the software’s help files for the operation method.
   • “ImageMixer” is not compatible with Mac OS X.
   • “Image Transfer” cannot be used with Macintosh.
Creating a Video CD using “ImageMixer”

You can create a Video CD using “ImageMixer Ver.1.5 for Sony.” You can play back created Video CDs on a Video CD-compatible DVD player, or on a computer using Video CD application software.

1 Start “ImageMixer.”
2 Click 🎁.
   The video CD creating mode turns on.
3 Drag & drop the desired file or album to the menu screen.
   The selected image is added to the menu screen.

   • This section describes the English screen.

4 Click 😊.
   You can preview the image.

5 Click 🎥.
   The disc creating dialogue appears.

6 Insert a blank CD-R into the CD-R drive and click [OK].
   The disc creation starts.
   • You cannot use CD-RW discs.
   • The CD-R drive is required to create a Video CD.

For the Macintosh edition
   • Roxio-manufactured “Toast” (not supplied) is required to create a Video CD.
   • The playback time of the movie file becomes shorter on the preview screen.
If you experience trouble with your camera, try the following solutions.

1  First check the items on the tables below.
If code “C:□□:□□” is displayed on the LCD screen, the self-diagnosis display function is working (page 70).

2  Should your camera still not work properly, open the waterproof cover to press the RESET button using a fine-tipped object, then close the cover and turn on the power again. (All the settings including date and time are cleared.)

3  Should your camera still not work properly, consult your Sony dealer or local authorized Sony service facility.

### Batteries and Power

<table>

<td>• You are attempting to play back an image of a size that cannot be played back on your camera.</td>
</tr>
<tr>
<td>INVALID OPERATION</td>
<td>• You are attempting to assign the print (DPOF) mark to a file that was created by another device.</td>
</tr>
<tr>
<td>🚦</td>
<td>• The battery level is low or zero. Charge the batteries (page 10). Depending on the conditions of use, the indicator may flash even though there are still 5 to 10 minutes of remaining battery time left.</td>
</tr>
</tbody>
</table>
### Troubleshooting

**ENLARGED PLAYBACK ERROR**

- You are attempting to perform enlarged playback for a file created using other devices.
- Enlarged playback is not available for images processed using a computer.
- An error occurred while your camera was performing enlarged playback.

<table>
<thead>
<tr>
<th>Message</th>
<th>Meaning/Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENLARGED PLAYBACK ERROR</td>

</tbody>
</table>
Self-diagnosis display
— If a code starting with an alphabet letter appears

Your camera has a self-diagnosis display. This function displays the camera condition on the LCD screen with a combination of a letter and four numerical digits. If this occurs, check the following code chart and attempt the corresponding corrective actions. The last two digits (indicated by □□) will differ depending on the state of the camera.

<table>
<thead>
<tr>
<th>Code</th>
<th>Cause</th>
<th>Countermeasure</th>
</tr>
</thead>
<tbody>
<tr>
<td>C:32:</td>
<td>There is trouble with your camera’s hardware.</td>
<td>• Turn the power off and on again (page 15).</td>
</tr>
<tr>
<td>C:13:</td>
<td>The camera cannot read or write data on the “Memory Stick.”</td>
<td>• Re-insert the “Memory Stick” several times.</td>
</tr>
<tr>
<td></td>
<td>An unformatted “Memory Stick” is inserted.</td>
<td>• Format the “Memory Stick” (page 47).</td>
</tr>
<tr>
<td></td>
<td>The inserted “Memory Stick” cannot be used with your camera, or the data is damaged.</td>
<td>• Insert a new “Memory Stick” (page 18).</td>
</tr>
<tr>
<td>E:61:</td>
<td>A camera malfunction that you cannot reverse has occurred.</td>
<td>• Open the waterproof cover to press the RESET button (page 61), then close the cover and turn the power on again.</td>
</tr>
<tr>
<td>E:91:</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

If you are unable to solve the problem even after trying the corrective actions a few times, repairs may be necessary. Contact your Sony dealer or local authorized Sony service facility and inform them of the 5-digit code.
Example: E:61:10
Menu items

Menu items that can be modified differ depending on the position of the mode switch. The LCD screen shows only the items you can operate at the moment. Factory settings are indicated with ■.

Precautions

Do not leave the camera in the following places

- In extremely hot place, such as in a car parked in the sun. The camera body may become deformed or this may cause a malfunction.
- Under direct sunlight or near a heater. The camera body may become deformed or this may cause a malfunction.
- On rocking vibration.
- Near strong magnetic place.

Notes on use

- Do not open the waterproof cover underwater, in places exposed to water, at the seashore or other places with lots of sand dust. Water or sand entering the inside of the camera may cause a malfunction or irreparable damage.
- When not using the camera for a long period of time, turn on the power once every so often. Shoot and play back images or otherwise operate the camera for about 3 minutes to ensure proper operation.
- Do not connect the battery charger to an electronic type transformer or other overseas travel equipment. This may cause the battery charger to become excessively hot or cause a malfunction.

On charging the batteries

- To protect the batteries, remove the batteries from the battery charger within 24 hours after charging is completed.
- Charging the batteries in an ambient temperature of 10°C to 30°C is recommended.

On cleaning

Cleaning the LCD screen
Wipe the screen surface with an LCD cleaning kit (not supplied) to remove fingerprints, dust, etc.

Cleaning the lens
Wipe the lens surface with a soft cloth to remove fingerprints, dust, etc.

Cleaning the camera surface
Clean the camera surface with a soft cloth slightly moistened with water, then wipe the surface with a dry cloth. Do not use the following as this may damage the finish or the casing.
- Thinner
- Benzine
- Alcohol
- Diposable cloth
- Volatile insecticide
- Contact with rubber or vinyl for a long time

After getting the camera wet

- Wipe away any water droplets on the camera body with a clean, dry, soft cloth.
- Note that water remaining in the gaps on the camera body may get your clothes or the inside of your bag wet.
- In cold places, water droplets may freeze on the camera body. Note that using the camera with water droplets frozen on it may cause a malfunction.

When sand, dirt or seawater adhere to the camera

If salt or other dirt is left encrusted on the camera, the metal portions may become damaged or rusted and result in water leaks. Follow the procedure below and clean the camera before opening the waterproof cover. Use tap water at 30°C or less to wash the camera.

1. Leave the camera immersed in a bucket or other container filled with fresh water.
- Wash the camera by gently moving it back and forth to thoroughly remove any dirt, sand and salt. Then, let it soak for approximately 30 minutes.
- Do not rub the lens or the LCD screen when they are dirty as this may cause scratches.
2. Wipe the camera.
   - Wipe away the water on the camera using a clean, dry, soft cloth, then leave the camera in the shade to dry.
   - Water that is not completely wiped away may seep out later, so place the camera on a soft cloth.

Other precautions
   - If there is mud on the O-ring, or if the camera has been in seawater, remove the O-ring to clean and inspect it (page 81).
   - When sun oil or other oily substances adhere to the camera, wash the camera in tap water. Leaving these substances on the camera may cause surface discoloration or other damage.
   - Do not wash the camera in a washing machine, etc.
   - Do not swing the camera violently to shake off the water or forcibly dry the camera using a hair dryer, etc.
   - When the O-ring or the O-ring mating surface is extremely dirty, consult your Sony dealer or local authorized Sony service facility.

On storage
Avoid storage in hot, cold or humid places, or places exposed to naphthalene, camphor or other chemicals, as this may damage the camera.

Note on operating temperature
Your camera is designed for use between the temperatures of 0°C and 40°C (32°F and 104°F). Shooting in extremely cold or hot places that exceed this range is not recommended.

On moisture condensation
If the camera is brought directly from a cold to a warm location, or is placed in a very damp room, moisture may condense inside or outside the camera. Using the camera with water droplets inside may cause a malfunction of the camera.

Moisture condensation occurs easily when:
   - The camera is brought from a cold location such as a ski slope into a warmly heated room.
   - The camera is taken from an air-conditioned room or car interior to the hot outdoors.
   - The camera is brought suddenly from a damp, warm place to underwater, etc.

How to prevent moisture condensation
When bringing the camera from a cold place to a warm place, seal the camera in a plastic bag and allow it to adapt to conditions at the new location over a period of time (about an hour).

If moisture condensation occurs
Turn off the camera and wait about an hour with the waterproof cover and inner cover opened for the moisture to evaporate. Note that if you attempt to shoot with moisture remaining inside the lens, you will be unable to record clear images.
On internal rechargeable button battery

This camera has an internal rechargeable button battery for maintaining the date and time and other settings regardless of whether the power is on or off. This rechargeable button battery is continually charged as long as you are using the camera. However, if you use the camera for only short periods it discharges gradually, and if you do not use the camera at all for about one month it becomes completely discharged. In this case, be sure to charge this rechargeable button battery before using the camera. However, even if this rechargeable button battery is not charged, you can still use the camera as long as you do not record the date and time.

Charging method

Install charged size AAA Nickel-Metal Hydride batteries, and leave the camera for 24 hours or more with the power off.

“Memory Stick”

“Memory Stick” is a new compact, portable and versatile IC recording medium with a data capacity that exceeds the capacity of a floppy disk.

In addition to exchanging data between “Memory Stick” compatible equipment, you can also use a “Memory Stick” to store data as a type of detachable external recording media.

There are two types of “Memory Stick”: ordinary “Memory Stick” and “MagicGate Memory Stick” that is equipped with the MagicGate* copyright protection technology. You can use both types of “Memory Stick” with your camera. However, because your camera does not support the MagicGate standards, data recorded with your camera is not subject to MagicGate copyright protection.

In addition, you can also use “Memory Stick Duo” or “Memory Stick PRO” with your camera.

<table>
<thead>
<tr>
<th>“Memory Stick” type</th>
<th>Recording/Playback</th>
</tr>
</thead>
<tbody>
<tr>
<td>Memory Stick (Memory Stick Duo)</td>
<td>0</td>
</tr>
<tr>
<td>MagicGate Memory Stick (MagicGate Memory Stick Duo)</td>
<td>0**</td>
</tr>
<tr>
<td>Memory Stick PRO</td>
<td>0**</td>
</tr>
</tbody>
</table>

** The camera cannot record or play back the data needed by the MagicGate function.
All “Memory Stick” media operations are not necessarily guaranteed.

Notes on using the supplied “Memory Stick”

- You cannot record, edit or delete images when the write-protect switch is set to LOCK.

The position or the shape of the write-protect switch may differ depending on the “Memory Stick” you use.

* MagicGate is copyright protection technology that uses encryption technology.
* “Memory Stick” formatted with a computer is not guaranteed to operate with this camera.
• Do not remove the “Memory Stick” while reading or writing data.
• Data may be corrupted in the following cases.
  – When the “Memory Stick” is removed or the camera is turned off during read or write operation
  – When the “Memory Stick” is used in locations subject to static electricity or electrical noise
• We recommend backing up important data.
• Do not attach any other material than the supplied label on the labeling position.
• Attach the label in the prescribed label location, taking care that the label does not extend from this location.
• When you carry or store the “Memory Stick,” put it in the case supplied with it.
• Do not touch the terminal of the “Memory Stick” with your hand or a metal object.
• Do not strike, bend or drop the “Memory Stick.”
• Do not disassemble or modify the “Memory Stick.”
• Do not expose the “Memory Stick” to water.
• Do not use or keep the “Memory Stick” under the following conditions:
  – High temperature locations such as the hot interior of a car parked in direct sunlight
  – Locations exposed to direct sunlight
  – Humid locations or locations with corrosive substances

Notes on using “Memory Stick Duo” (not supplied)
• When using a “Memory Stick Duo” with your camera, be sure to insert the “Memory Stick Duo” into a Memory Stick Duo adaptor.
• When inserting a “Memory Stick Duo” into a Memory Stick Duo adaptor, make sure the “Memory Stick Duo” is inserted facing the correct direction.
• When using a “Memory Stick Duo” inserted into a Memory Stick Duo adaptor with this camera, make sure that the “Memory Stick Duo” is inserted facing the correct direction. Note that improper use may damage the equipment.
• Do not insert a “Memory Stick Duo” without a Memory Stick Duo adaptor into “Memory Stick” compatible equipment, as this may cause equipment trouble.

Note on using “Memory Stick PRO” (not supplied)
• “Memory Stick PRO” with a capacity up to 1GB have been confirmed to operate properly with this camera.
On Nickel-Metal Hydride batteries

Effective use of the battery

- Battery performance decreases in low-temperature surroundings, and the battery life is shortened under such circumstances. To use the battery longer, we recommend you keep the battery in its case in a pocket close to your body to warm it, and insert it in your camera just before you start shooting.
- If you set [LCD LIGHT] to [OFF], the battery will run for a longer amount of time.
- If you shoot a lot using the flash, the battery power will be used up faster.
- We recommend having spare batteries handy for two or three times the expected shooting time, and try test shooting before actually using the camera.
- Do not expose the battery to water. The battery is not water-resistant.

Battery life

- The battery life is limited. The battery capacity decreases little by little as you use it more and more, and as time passes. When the battery operating time seems to have been considerably shortened, a probable cause is that the batteries have reached the end of their life.
- The battery life varies depending on storage, operating conditions, and environment, and is different for each battery.
**On the battery charger**

- Do not charge any other batteries except Sony Nickel-Metal Hydride batteries in the battery charger supplied with your camera. If you try to charge any other type of battery (e.g., manganese batteries, alkaline dry cells, primary lithium batteries, or Ni-Cd batteries) than the batteries specified, those batteries may leak, overheat, or explode, causing the danger of burns or other injuries.
- Do not charge fully charged Nickel-Metal Hydride batteries again. Otherwise, there is a danger of leaks, excessive heat, explosions, or electric shock.
- When charging a high capacity battery other than the supplied battery using the supplied battery charger, the full capacity of the battery may not be available.
- When the CHARGE lamp flashes, this may indicate a battery error or that batteries other than the specified type have been inserted. Check that the batteries are the specified type. If the batteries are the specified type, remove all the batteries, replace them with new ones or another ones and check if the battery charger operates correctly. If the battery charger operates correctly, a battery error may have occurred.
- The battery charger is not waterproof. Do not allow the battery charger to become wet.

**On the O-ring**

O-rings are a type of waterproof packing that is used in underwater cameras and watches, diving equipment, etc. This camera uses an O-ring in the waterproof cover portion.

Before use

Before using this camera underwater or in places exposed to water, be sure to inspect the O-ring and the O-ring mating surface. If the O-ring or the O-ring mating surface is cracked, scratched or otherwise damaged, or if sand particles, hair or other minute dirt has adhered, the waterproofing performance may be impaired. Note that water entering the inside of the camera may cause irreparable damage.

---

On the battery charger

- Do not charge any other batteries except Sony Nickel-Metal Hydride batteries in the battery charger supplied with your camera. If you try to charge any other type of battery (e.g., manganese batteries, alkaline dry cells, primary lithium batteries, or Ni-Cd batteries) than the batteries specified, those batteries may leak, overheat, or explode, causing the danger of burns or other injuries.
- Do not charge fully charged Nickel-Metal Hydride batteries again. Otherwise, there is a danger of leaks, excessive heat, explosions, or electric shock.
- When charging a high capacity battery other than the supplied battery using the supplied battery charger, the full capacity of the battery may not be available.
- When the CHARGE lamp flashes, this may indicate a battery error or that batteries other than the specified type have been inserted. Check that the batteries are the specified type. If the batteries are the specified type, remove all the batteries, replace them with new ones or another ones and check if the battery charger operates correctly. If the battery charger operates correctly, a battery error may have occurred.
- The battery charger is not waterproof. Do not allow the battery charger to become wet.

---

On the O-ring

O-rings are a type of waterproof packing that is used in underwater cameras and watches, diving equipment, etc. This camera uses an O-ring in the waterproof cover portion.

---

Before use

Before using this camera underwater or in places exposed to water, be sure to inspect the O-ring and the O-ring mating surface. If the O-ring or the O-ring mating surface is cracked, scratched or otherwise damaged, or if sand particles, hair or other minute dirt has adhered, the waterproofing performance may be impaired. Note that water entering the inside of the camera may cause irreparable damage.
Inspecting the O-ring and the O-ring mating surface

Inspect the O-ring and the O-ring mating surface in a location that is free from sand, dust or moisture.

1. Before opening the waterproof cover, rinse off any sand and completely wipe away any water that may be present on the camera body.
   - Sand or water getting inside the camera may cause a malfunction.

2. Open the waterproof cover.
   - For details on how to open and close the waterproof cover, see page 12.

3. Inspect the O-ring and the O-ring mating surface.
   - Be sure to wipe away any dirt, sand particles, hair, dust, salt, lint or other foreign matter adhering to the O-ring with a soft, lint-free cloth. Even a single hair adhering to the O-ring may cause a water leak.

   - Tiny dirt particles that are difficult to see may have adhered to the O-ring, so inspect the O-ring by running it through your fingers.
   - When wiping away dirt from the O-ring, take care that cloth fibers do not remain on the O-ring.
   - When it is difficult to wipe away the dirt from the O-ring, remove the O-ring and wash it with water.
   - Be sure to replace the O-ring with a new one if it becomes cracked, warped, crushed, twisted, split, scratched, rough or otherwise damaged.

4. Close the waterproof cover.

5. Lock the lock switch.
Removing/Setting the O-ring
When removing the O-ring for replacement, cleaning or inspection, take care for the following points.
If there is mud on the O-ring, or if the camera has been in seawater, be sure to remove the O-ring to clean and inspect it.

Removing the O-ring
Press lightly on the O-ring with your fingers to shift it from the groove, grasp the slack portion, and remove the O-ring.

Cleaning the O-ring and the O-ring groove
- Use tap water at 30°C or less to wash the O-ring that you removed. Wipe away any water when finished.
- The O-ring is specially treated, so take care not to allow grease or oil to adhere to the O-ring.
- When sand particles or encrusted salt may be present in the O-ring groove, clean the groove carefully using a cotton swab. Take care that fibers from the cotton swab do not remain in the groove.
- Do not use a pointed, sharp or metal object for cleaning, as this may scratch the O-ring groove.

Setting the O-ring
Place the O-ring in the groove, taking care for the following points.
- Do not place excessive tension on the O-ring.
- After setting, run a final check for any of the following problems.
  - Are there any water droplets on the O-ring?
  - Is the O-ring twisted?
  - Has any dirt, etc. adhered to the O-ring?
  - Is the O-ring protruding from the groove?

O-ring life
- Replace the O-ring with a new one if it becomes cracked, warped, crushed, twisted, split, scratched, rough or otherwise damaged. Even if the O-ring has no problems, deformation and wear over time can cause the waterproof performance to drop, so replace the O-ring with a new one after approximately two years of use.
- Consult your Sony dealer or local authorized Sony service facility for replacement of O-rings. Order the following parts number when purchasing the O-ring:
  3-081-956-□□

• Do not use a pointed, sharp or metal object to remove the O-ring. This can scratch the O-ring or the O-ring mating surface which may allow water to leak inside the camera.
• Do not place excessive tension on the O-ring.
