Getting started

About this User guide
This is the Xperia™ Z3+ User guide for the Android™ 6.0 software version. If you're not sure which software version your device is running, you can check it via the Settings menu. For more information about software updates, see Updating your device on page 136.

To check the current software version of your device
1 From your Home screen, tap 📲.
2 Find and tap Settings > About phone > Android™ version.

Overview
1. Charging light/Notification light  
2. Front camera lens  
3. Ear speaker  
4. Proximity/Light sensor  
5. Second microphone  
6. Power key  
7. Volume/Zoom key  
8. Camera key  
9. Main microphone/Speaker  
10. Charger/USB cable port  
11. Strap hole  
12. Main Wi-Fi/Bluetooth antenna area  
13. Main camera lens  
14. Camera light  
15. GPS antenna area  
16. Headset jack*  
17. Second Wi-Fi antenna area  
18. Nano SIM/Memory card slot cover  
19. NFC™ detection area

Your device supports headsets with a standard 3.5mm 3-pin or 5-pin headphone plug. The headset jack also supports 4-pin plugs as long as the headphone plug uses the CTIA standard.

**Assembly**

Your device only supports nano SIM cards. The nano SIM card and the memory card share the same holder but have separate slots in the holder. Make sure you don’t confuse the two.

![Device Diagram]

To prevent data loss, make sure you turn off your device or unmount the memory card before you drag out the holder to remove the nano SIM card or memory card from the device.

**To insert the nano SIM card**

If you insert the nano SIM card while the device is powered on, the device restarts automatically. The nano SIM card and the memory card share the same holder. If a memory card is already inserted in the holder and the device is powered on, you must turn off the device or unmount the memory card before removing the holder to insert the nano SIM card. You can unmount the memory card under **Settings** by tapping **Storage > Unmount SD card**.
1 Turn off the device and open the cover for the nano SIM card and memory card slots.
2 Using a fingernail or other similar object, drag out the holder for the nano SIM card and memory card.
3 Place the nano SIM card in the nano SIM card slot in the holder, then re-insert the holder.
4 Close the cover.

Make sure you re-insert the holder for the nano SIM card and memory card in the correct orientation. When you drag out the holder to insert the nano SIM card, do not turn the holder around.

To insert a memory card
1 Turn off the device or unmount the memory card under Settings by tapping Storage > Unmount SD card.
2 Open the cover for the nano SIM card and memory card slot.
3 Using a fingernail or other similar object, drag out the holder for the nano SIM card and memory card.
4 Place the memory card in the memory card slot in the holder, then re-insert the holder.
5 Close the cover.

If you drag out the holder for the nano SIM and memory card when the device is powered on, the device restarts automatically.

To remove the nano SIM card

The nano SIM card and the memory card share the same holder. If a memory card is already inserted in your device, you must first turn off the device or unmount the memory card before you drag out the holder to remove the SIM card. You can unmount the memory card under Settings by tapping Storage > Unmount SD card.

1 Open the cover for the nano SIM card and memory card slot.
2 Using a fingernail or other similar object, drag out the holder for the nano SIM card and memory card.
3 Remove the nano SIM card in the nano SIM card slot in the holder, then re-insert the holder.
4 Close the cover.

To remove the memory card
1 Turn off the device and open the cover for the nano SIM card and memory card slot.
2 Using a fingernail or other similar object, drag out the holder for the nano SIM card and memory card.
3 Remove the memory card from the memory card slot in the holder, then re-insert the holder.
4 Close the cover.

*You can also remove the memory card without turning the device off in step 1. To use this method, you must unmount the memory card under **Settings > Storage > Unmount SD card** and then follow the rest of the instructions above.*

**Screen protection**

*Before using your device, remove the transparent protection film by pulling up on the protruding tab.*

It is recommended to protect your device with a Sony-branded screen cover or protector intended for your Xperia™ model. The use of third party screen protection accessories may prevent your device from working by covering sensors, lenses, speakers, or microphones and it can invalidate the warranty.

**Starting your device for the first time**

The first time you start your device, a setup guide opens to help you configure basic settings, sign in to some accounts and personalise your device. For example, if you have a Sony Entertainment Network or Google™ account, you can sign in to it here and get set up straight away.

*You can also access the setup guide later from the Settings menu. To access the setup guide on a device with multiple users, you must be logged in as the owner, that is, the primary user.*

**To turn on the device**

1 Press and hold down the power key until the device vibrates.
2 Enter your SIM card PIN when requested, then tap .
3 Wait a while for the device to start.

**To turn off the device**

1 Press and hold down the power key until the options menu opens.
2 In the options menu, tap **Power off**.

*It may take a while for the device to shut down.*

**Why do I need a Google™ account?**

Your Xperia™ device from Sony runs on the Android™ platform developed by Google™. A range of Google™ applications and services is available on your device when you purchase it, for example, Gmail™, Google Maps™, YouTube™ and the Play Store™ application, which gives you access to the Google Play™ online store.
for downloading Android™ applications. To get the most out of these services, you need a Google™ account. For example, a Google™ account is mandatory if you want to:

- Download and install applications from Google Play™.
- Synchronise email, contacts and the calendar using Gmail™.
- Chat with friends using the Hangouts™ application.
- Synchronise your browsing history and bookmarks using the Google Chrome™ web browser.
- Identify yourself as the authorised user after a software repair using Xperia™ Companion.
- Remotely find, lock or clear a lost or stolen device using the my Xperia™ or Android™ Device Manager services.

For more information about Android™ and Google™, go to http://support.google.com.

It is crucial that you remember your Google™ account username and password. In some situations, you may need to identify yourself for security reasons using your Google™ account. If you fail to give your Google™ username and password in such situations, your device is locked. Also, if you have more than one Google™ account, make sure to enter the details for the relevant account.

To set up a Google™ account on your device

1. From your Home screen, tap 📱.
2. Find and tap Settings > Accounts > Add account > Google.
3. Follow the registration wizard to create a Google™ account, or sign in if you already have an account.

You can also sign in to or create a Google™ account from the setup guide the first time you start your device. Or you can go online and create an account at www.google.com/accounts.

Charging your device

Your device has an embedded, rechargeable battery that should be replaced only by Sony or an authorised Sony repair centre. You should never try to open or take apart the device yourself. Opening the device can cause damage that voids your warranty.

The battery is partly charged when the device is shipped from the factory. Depending on how long your device was in the box before you purchased it, the battery level may be quite low. It is therefore recommended that you charge the battery for at least 30 minutes before starting up your device for the first time. You can still use your device while it is charging. To read more about how to improve the battery performance, see Battery and power management on page 32.

If your device gets exposed to water, wipe it dry with a microfibre cloth and shake the device at least 15 times with the USB port facing downwards. Repeat the procedure if moisture is still visible in the USB port. Only insert the USB cable into the USB port after the port has completely dried.

To dry the USB port
1 Using a micro-fibre cloth, wipe away any excess moisture from your device.
2 With the device held firmly and the USB port facing downwards, shake the device vigorously at least 15 times.
3 If moisture is still visible in the USB port, shake the device again several times.
4 Use a micro-fibre cloth to wipe away any remaining moisture from the USB port.

To charge your device
1. Plug the charger into a power outlet.
2. Plug one end of the USB cable into the charger (or into the USB port of a computer).
3. Plug the other end of the cable into the micro USB port on your device, with the USB symbol facing up. The notification light illuminates when charging begins.
4. When the device is fully charged, disconnect the cable from your device by pulling it straight outwards. Make sure not to bend the connector.

⚠️ If the battery is completely discharged, it may take a few minutes before the notification light illuminates and the charging icon appears.

Device security

Making sure your device is protected

You can prevent other people from using your device without your permission. For example, if your device is lost, stolen, or wiped, only someone with your Google™ account or screen lock information can use the device. To make sure that your device is protected, it is important that you set a secure screen lock and add your Google™ account on your device. It is crucial that you remember both your screen lock information and your Google™ account credentials. To make sure your device is protected, you can:

• Set a secure screen lock on your device, that is, a PIN, password, or pattern screen lock to prevent anyone from resetting your device. For more information, see Screen lock on page 14.
• Add a Google™ account to prevent others from using your device if it gets stolen and/or wiped. For more information, see Why do I need a Google™ account? on page 10.
• Activate either the “Protection by my Xperia” or the Android™ Device Manager web service. Using one of these services, you can remotely locate, lock or erase a lost device. For more information, see Finding a lost device on page 21.

Verifying the ownership of your device

When your device is protected, you need to either unlock your screen with your PIN, password, pattern, or enter your Google™ account information depending on the protection features you are using. Below are examples of protection features and some of the required credentials:

<table>
<thead>
<tr>
<th>Protection Type</th>
<th>Required Credentials</th>
</tr>
</thead>
<tbody>
<tr>
<td>Factory Data Reset</td>
<td>You must unlock your screen before you are allowed to perform a Factory Data Reset.</td>
</tr>
<tr>
<td>Protection by my Xperia</td>
<td>If you remotely reset your device using this service, you must enter the username and password for a Google™ account associated with the service. The device must be connected to the Internet before the setup process can be completed. Otherwise, you will not be able to use your device after the reset.</td>
</tr>
<tr>
<td>Android™ Device Manager</td>
<td>If you remotely reset your device using this service, you must enter the username and password for a Google™ account. The device must be connected to the Internet before the setup process can be completed. Otherwise, you will not be able to use your device after the reset.</td>
</tr>
<tr>
<td>Software repair</td>
<td>If you use the Xperia™ Companion software to perform a software repair, you’re asked to enter your Google™ account username and password when you start the device after the repair is complete.</td>
</tr>
</tbody>
</table>

For Android™ Device Manager, it is necessary to enter information from a Google™ account. This can be any Google™ account which you have set up on the device. If you cannot provide the relevant account information during a setup process, you won’t be able to use the device at all.

Screen lock

There are several ways to unlock the screen. The security level of each lock type is listed below in order of weakest to strongest:

• Swipe – no protection, but you have quick access to the Home screen.
• Pattern – draw a simple pattern with your finger to unlock your device.
• PIN – enter a numeric PIN of at least four digits to unlock your device.
• Password – enter an alpha-numeric password to unlock your device.

It is very important that you remember your screen unlock pattern, PIN or password. If you forget this information, it may not be possible to restore important data such as contacts and messages.
To create a screen lock pattern
1 From your Home screen, tap 📱.
2 Find and tap Settings > Security > Screen lock > Pattern.
3 Follow the instructions in your device.

If your lock pattern is rejected five times in a row when you try to unlock your device, you must wait 30 seconds and then try again.

To change screen lock type
1 From your Home screen, tap 📱.
2 Find and tap Settings > Security > Screen lock.
3 Follow the instructions in your device and select another screen lock type.

To change the screen lock pattern
1 From your Home screen, tap 📱.
2 Find and tap Settings > Security > Screen lock.
3 Draw your screen unlock pattern.
4 Tap Pattern and follow the instructions in your device.

To create a screen lock PIN
1 From your Home screen, tap 📱.
2 Find and tap Settings > Security > Screen lock > PIN.
3 Enter a numeric PIN, then tap Continue.
4 Re-enter and confirm your PIN, then tap OK.
5 Follow the instructions in your device.

To create a screen lock password
1 From your Home screen, tap 📱.
2 Find and tap Settings > Security > Screen lock > Password.
3 Enter a password, then tap Continue.
4 Re-enter and confirm your password, then tap OK.
5 Follow the instructions in your device.

To activate the Swipe unlock function
1 From your Home screen, tap 📱.
2 Find and tap Settings > Security > Screen lock.
3 Draw your screen unlock pattern, or enter your PIN or password if one of these screen lock types is enabled.
4 Tap Swipe.

Resetting a forgotten screen lock
If you’ve forgotten your screen lock PIN, password or pattern, you might be able to reset it using the Protection by my Xperia service. No content on your device is lost after you have performed a screen lock reset using the Protection by my Xperia service.

To activate the Protection by my Xperia service, see Finding a lost device on page 21.

To reset the screen lock using Protection by my Xperia
1 Make sure you know your Google™ account username and password and that you have enabled the Protection by my Xperia service on your device.
2 Go to myxperia.sonymobile.com using any Internet-connected device.
3 Sign in using the same Google™ account that you have set up on your device.
4 Click the picture of your device under Your devices.
5 Select Lock or Change PIN2 to replace the current screen lock with a new PIN code.
6 Follow the on-screen instructions provided by Protection by my Xperia.

! Depending on your security settings, your device may lock after a screen lock reset. You then need to enter your Google™ account username and password in order to use the device.
Unlocking your device automatically

The Smart Lock feature makes unlocking your device easier by letting you set it to unlock automatically in certain situations. You can keep your device unlocked, for example, when it's connected to a Bluetooth® device or when you're carrying it with you.

To prepare your device to unlock automatically, you first need to perform the following steps in the order given:

• Make sure you have an active Internet connection, preferably a Wi-Fi® connection to limit data traffic charges.
• Make sure that all your apps are updated using the Play Store™ application in order to ensure that the Google Play™ services app is updated. Having an up-to-date Google Play™ services app ensures that you can use the latest Smart Lock features.
• Enable Smart Lock.
• Set when you want your device to unlock automatically.

The Smart Lock feature may not be available in every market, country or region.

To enable Smart Lock

1. Make sure that you've set a pattern, PIN or password for your screen lock.
2. From your Home screen, tap 📞.
4. Drag the slider beside Smart Lock (Google) to the right.
5. Tap the back arrow next to Trust agents.
6. Find and tap Smart Lock.
7. Enter your pattern, PIN or password. You need to enter this screen lock any time you want to change your Smart Lock settings.
8. Select a Smart Lock type.

Setting when to keep the device automatically unlocked

You can set Smart Lock to keep your device unlocked using the following settings:

• Trusted devices — Keep your device unlocked when a trusted Bluetooth® device is connected.
• Trusted places — Keep your device unlocked when you're in a trusted location.
• On-body detection — Keep your device unlocked when you're carrying your device with you.

You have to manually unlock your device when you don't use it for 4 hours and after you restart it.

Connecting to trusted Bluetooth® devices

You can designate a connected Bluetooth® device as a "trusted" device and keep your Xperia™ device unlocked while it's connected to it. So if you have Bluetooth® devices that you connect to regularly, for example, a car speaker or home entertainment system, a Bluetooth® watch, or a fitness tracker, you can add them as trusted devices and bypass the added security of a lockscreen to save time. This feature is suitable if you're normally in a relatively secure place when you use these devices. In some cases, you may still need to manually unlock your device before a trusted device can be connected.

It is not recommended to add devices that are constantly connected to your device as trusted devices, for example, Bluetooth® keyboards or cases.

As soon as a trusted Bluetooth® device is switched off or moves out of range, your screen locks and you need your PIN, pattern or password to unlock it.
To add a trusted Bluetooth® device
1 Make sure your device is paired and connected to the Bluetooth® device that you want to add as a trusted device.
2 In the Smart Lock menu, tap Trusted devices.
3 Tap Add trusted device > Bluetooth.
4 Tap a device name to select it from the list of connected devices. Only paired devices appear in this list.
5 Depending on the security of your connection, you may need to manually unlock your device before the trusted device can keep it unlocked.

To remove a trusted Bluetooth® device
1 From your Home screen, tap 📱.
2 Find and tap Settings > Security > Smart Lock > Trusted devices.
3 Tap the device that you want to remove.
4 Tap Remove trusted device.

Making sure you're secure when using trusted devices
Different Bluetooth® devices support different Bluetooth® standards and security capabilities. There's a possibility that someone could keep your Xperia™ device unlocked by imitating your Bluetooth® connection, even if your trusted device is no longer nearby. Your device is not always able to determine whether your connection is secure from someone trying to imitate it.

When your device can't determine that you're using a secure connection, you'll get a notification on your Xperia™ device and may need to manually unlock it before the trusted device can keep it unlocked.

Bluetooth® connectivity range can vary depending on factors like the model of your device, the connected Bluetooth® device, and your environment. Depending on these factors, Bluetooth® connections can work over distances up to 100 meters. If someone takes your Xperia™ device while it's near a trusted device, they may be able to access your Xperia™ device if the trusted device has unlocked it.

Connecting to trusted places
When the Trusted places feature is set up, the lock screen security on your Xperia™ device gets disabled when you are in a designated trusted location. For this feature to work, you must have an Internet connection (preferably over Wi-Fi®) and allow your device to use your current location.

To set up trusted places, first make sure that high accuracy location mode or battery-saving location mode is enabled on your device before you add home or custom locations.

! The exact dimensions of a trusted location are an estimate and may extend beyond the physical walls of your home or other area that you have added as a trusted location. This feature can keep your device unlocked within a radius of up to 80 meters. Also be aware that location signals can be replicated or manipulated. Someone with access to specialised equipment could unlock your device.

To add your home location
1 Make sure location mode is turned on and that you are using either the High accuracy or Battery saving setting.
2 From your Home screen, tap 📱.
3 Find and tap Settings > Security > Smart Lock > Trusted places > Home.
4 Tap Turn on this location.
To edit your home location

1. Make sure location mode is turned on and that you are using either the **High accuracy** or **Battery saving** setting.
2. From your Home screen, tap Settings.
3. Find and tap **Settings > Security > Smart Lock > Trusted places**.
4. Select your home location.
5. Tap **Edit**.
6. In the search bar, enter the location that you want to use as your home location.

*Tip: If your home has multiple buildings at the same address, the trusted place that you want to add might be different from the actual address. To ensure better location accuracy, you can add the actual location of your home within the building complex as a custom place.*

To remove your home location

1. Make sure location mode is turned on and that you are using either the **High accuracy** or **Battery saving** setting.
2. From your Home screen, tap Settings.
3. Find and tap **Settings > Security > Smart Lock > Trusted places > Home**.
4. Tap **Turn off this location**.

Using custom locations

You can add any location as a trusted, custom place where your device can remain unlocked.

To add a custom place

1. Make sure location mode is turned on and that you are using either the **High accuracy** or **Battery saving** setting.
2. From your Home screen, tap Settings.
3. Find and tap **Settings > Security > Smart Lock > Trusted places**.
4. Tap **Add trusted place**.
5. To use your current location as a trusted, custom place, tap **Select this location**.
6. Alternatively, to enter another location, tap the magnification glass icon and type the address. Your device searches for the entered location. To use the suggested address, tap the address.
7. To fine-tune the location, tap the back arrow next to the address, then drag the location pin to the desired location, and tap **Select this location**.

To edit a custom place

1. Make sure location mode is turned on and that you are using either the **High accuracy** or **Battery saving** setting.
2. From your Home screen, tap Settings.
3. Find and tap **Settings > Security > Smart Lock > Trusted places**.
4. Select the place that you want to edit.
5. Tap **Edit address**.
6. To enter another location, tap the magnification glass icon and type the address. Your device searches for the entered location. To use the suggested address, tap the address.
7. To fine-tune the location, tap the back arrow next to the address, then drag the location pin to the desired location, and tap **Select this location**.

To remove a custom place

1. Make sure location mode is turned on and that you are using either the **High accuracy** or **Battery saving** setting.
2. From your Home screen, tap Settings.
3. Find and tap **Settings > Security > Smart Lock > Trusted places**.
4. Select the place that you want to remove.
5. Tap **Delete**.
Keeping your device unlocked while you’re carrying it

Using the On-body detection feature, you can have your device stay unlocked when you have it on you, for example, if you’re carrying it in your hand, pocket or bag. The accelerometer in your device keeps your device unlocked when it senses that it’s being carried. The device locks when the accelerometer detects that the device has been put down.

⚠️ The On-body detection feature can’t distinguish whose body is connected. If you give your device to someone else while it’s unlocked using On-body detection, your device may stay unlocked for the other user. Keep in mind that On-body detection as a security feature is less secure than a pattern, PIN, or password.

To enable On-body detection
1. From your Home screen, tap 📱.
2. Find and tap Settings > Security > Smart Lock > On-body detection.
3. Drag the slider beside Off to the right, then tap Continue.

Using On-body detection

When you use the On-body detection feature, you need to be aware of the following behaviours:
• When your device senses that it’s on your body, it stays unlocked after you unlock it.
• Any time you put your device down and it senses that it’s no longer on your body, your device locks automatically.
• After you put your device down, for example, if you place it on a table, your device can take up to one minute to lock.
• After you get into a car, bus, train or other land vehicles, your device can take between 5 and 10 minutes to lock.
• Note that when you get on an airplane or a boat (or other non-land based vehicles), your device may not lock automatically, so make sure to lock it manually if needed.
• When you pick up your device again or get out of the vehicle, just unlock it once and your device then stays unlocked for as long as you have it on you.

To turn off On-body detection
1. From your Home screen, tap 📱.
2. Find and tap Settings > Security > Smart Lock > On-body detection.
3. Drag the slider beside On to the left.

SIM card protection

You can lock and unlock each SIM card that you use in your device with a PIN (Personal Identity Number). When a SIM card is locked, the subscription linked to the card is protected against misuse, meaning that you have to enter a PIN every time you start your device.

If you enter the PIN incorrectly more times than the maximum number of attempts allowed, your SIM card will become blocked. You then need to enter your PUK (Personal Unblocking Key) and a new PIN. Your PIN and PUK are supplied by your network operator.

To set up a SIM card lock
1. From the Home screen, tap 📱.
2. Find and tap Settings > Security > Set up SIM card lock.
3. Mark the Lock SIM card checkbox.
4. Enter the SIM card PIN and tap OK. The SIM card lock is now active and you will be prompted to enter this lock every time you restart the device.
To remove a SIM card lock
1 From the Home screen, tap Settings.
2 Find and tap Security > Set up SIM card lock.
3 Unmark the Lock SIM card checkbox.
4 Enter the SIM card PIN and tap OK.

To change the SIM card PIN
1 From the Home screen, tap Settings.
2 Find and tap Security > Set up SIM card lock.
3 Tap Change SIM PIN.
4 Enter the old SIM card PIN and tap OK.
5 Enter the new SIM card PIN and tap OK.
6 Re-type the new SIM card PIN and tap OK.

To unlock a blocked SIM card using the PUK code
1 Enter the PUK code and tap ✓.
2 Enter a new PIN code and tap ✓.
3 Re-enter the new PIN code and tap ✓.

! If you enter an incorrect PUK code too many times, you need to contact your network operator to get a new SIM card.

Finding the identification number of your device

Your device has a unique ID (identification) number. In your device, this number is referred to as the IMEI (International Mobile Equipment Identity). You should keep a copy of this number. You may require it, for example, when you access the Xperia™ Care support service and need to register your device. Also, if your device is stolen, some network providers can use this number to stop the device from accessing the network in your country.

To view your IMEI number on the label tray

1 Open the cover for the nano SIM and memory card slot.
2 Place a fingernail under the edge of the label tray, then drag the tray outwards.
   The IMEI number is displayed on the tray.

! To view the IMEI number, you can also open the phone dialer on your device and enter *#06#.

To view your IMEI number via the device settings
1 From your Home screen, tap Settings.
2 Find and tap About phone > Status.
3 Scroll to IMEI to view the IMEI number.
Finding a lost device

If you have a Google™ account, the “Protection by my Xperia” web service can help you locate and secure your device if you ever lose it. If you have activated this service on your device or at myxperia.sonymobile.com, you can:

- Locate your device on a map.
- Sound an alert even if the device is in silent mode.
- Remotely lock the device.
- Remotely clear the internal and external memory of the device, as a last resort.

⚠️ The “Protection by my Xperia” service may not be available in all countries/regions.

To activate the Protection by my Xperia service on your device

1. Make sure you have an active data connection.
2. From your Home screen, tap 
3. Find and tap Settings > Security > Protection by my Xperia > Activate.
4. If you are activating the service for the first time, mark the checkbox to agree with the terms and conditions of using the Protection by my Xperia service, then tap Accept.
5. If prompted, sign in to your Google™ account, or create a new one if you don’t have one.
6. Enable location services on your device if this function is not already enabled.

⚠️ To verify that the Protection by my Xperia service can locate your device after you activate the service, go to myxperia.sonymobile.com and sign in using the Google™ account that you have set up on your device.

⚠️ If you are using a device with multiple users, note that the Protection by my Xperia service is only available to the user who is logged in as the owner.

Lockdown mode

Lockdown mode is a feature of the Protection by my Xperia service. It gets enabled when unusual activity is detected on your device. Once your device goes into lockdown mode, you must sign in to the Google™ account that was used to activate the Protection by my Xperia service in order to reactivate your device and recover it from lockdown mode.

To prevent your device from being used or sold by thieves, lockdown mode does the following:

- Stops or disables all running applications.
- Limits access to notifications.
- Disables USB and Bluetooth® connections.
- Blocks all outgoing calls and allows only emergency calls.
- Connects incoming calls to voicemail, if available.

⚠️ If you delete your Google™ account permanently via your Google™ Account Settings page at https://myaccount.google.com, it becomes impossible to recover your device from lockdown mode or deactivate the Protection by my Xperia service. If, for some reason, you delete your Google™ account in this way, you only have a limited amount of time in which to restore it.
Actions that trigger lockdown mode

Lockdown mode is triggered in the following situations:

• During a factory reset procedure.
• When Xperia™ Companion is used to wipe out user data.
• When the Google™ account that was used to activate Protection by my Xperia on your device gets removed from your device (but not permanently deleted).
• When someone removes or tampers with security features on your device, for example, when someone tries to input the credentials for the Google™ account that you’ve used to activate Protection by my Xperia on your device but fails more than three times in a row.

! If you don’t want lockdown mode to get triggered by any of the above actions or situations, you can deactivate the Protection by my Xperia service.

To recover the device from lockdown mode

1 On the lockdown screen, tap Authenticate.
2 To complete the recovery procedure, sign in using the Google™ account that was used to activate the Protection by my Xperia service.

! Make sure that you have a working Internet connection, preferably over Wi-Fi®, to limit data traffic charges when recovering your device from lockdown mode.

To deactivate Protection by my Xperia

1 From your Home screen, tap  
2 Find and tap Settings > Security > Protection by my Xperia.
3 Tap Deactivate, then confirm deactivation.
4 To complete the procedure, sign in using the Google™ account that was used to activate the Protection by my Xperia service.
Learning the basics

Using the touchscreen

Tapping

- Open or select an item.
- Mark or unmark a checkbox or option.
- Enter text using the on-screen keyboard.

Touching and holding

- Move an item.
- Activate an item-specific menu.
- Activate selection mode, for example, to select several items from a list.
Pinching and spreading

- Zoom in or out on web pages, photos and maps, and when you’re taking photos or shooting videos.

Swiping

- Scroll up or down a list.
- Scroll left or right, for example, between Home screen panes.
Flicking

- Scroll quickly, for example, in a list or on a web page. You can stop the scrolling movement by tapping the screen.

Locking and unlocking the screen

When your device is on and left idle for a set period of time, the screen darkens to save battery power and locks automatically. This lock prevents unwanted actions on the touchscreen when you are not using it. When you buy your device, a basic screen swipe lock is already set. This means that you have to swipe upwards on the screen to unlock it. You can change the security settings later and add other kinds of locks. See Screen lock on page 14.

To activate the screen
- Briefly press the power key 🌌.

To lock the screen
- When the screen is active, briefly press the power key 🌌.

Home screen

The Home screen is the starting point for using your device. It’s similar to the desktop on a computer screen. Your Home screen can have up to seven panes, which extend beyond the regular screen display width. The number of Home screen panes is represented by a series of dots at the lower part of the Home screen. The highlighted dot shows the pane that you are currently in.
Introduction to Xperia™ widget — Tap to open the widget and select a task such as copying content from your old device or setting up Xperia™ services

1 Introduction to Xperia™ widget — Tap to open the widget and select a task such as copying content from your old device or setting up Xperia™ services

2 Dots — Represents the number of Home screen panes

To go to the Home screen

• Press 🏛.

To browse the Home screen

Home screen panes

You can add new panes to your Home screen (up to a maximum of seven panes) and delete panes. You can also set the pane that you want to use as the main Home screen pane.

To set a pane as the main Home screen pane

1 Touch and hold an empty area on your Home screen until the device vibrates.
2 Flick left or right to browse to the pane that you want to set as your main Home screen pane, then tap 🏛.

To add a pane to your Home screen

1 Touch and hold an empty area on your Home screen until the device vibrates.
2 To browse the panes, flick all the way to the right or left, then tap 🏛.
To delete a pane from your Home screen
1. Touch and hold any area on your Home screen until the device vibrates.
2. Flick left or right to browse to the pane that you want to delete, then tap on the top right corner of the pane.

Home screen settings
Use the Home Settings shortcut to adjust some basic settings of your Home screen. For example, you can set your Home screen to auto rotate and adjust the size of icons.

To set your Home screen to auto rotate
1. Touch and hold an empty area on your Home screen until the device vibrates, then tap Home Settings.
2. Drag the slider beside Auto-rotation to the right.

To adjust the size of icons on your Home screen
1. Touch and hold an empty area on your Home screen until the device vibrates, then tap Home Settings.
2. Tap Icon size, then select an option.

Application screen
The Application screen, which you open from the Home screen, contains the applications that come pre-installed on your device as well as applications that you download.

To view all applications on the Application screen
1. From your Home screen, tap .
2. Flick left or right on the Application screen.

To open an application from the Application screen
• Flick left or right to find the application, and then tap the application.

To search for an application from the Application screen
1. When the Application screen is open, tap .
2. Enter the name of the application that you want to search for.

To open the Application screen menu
• When the Application screen is open, drag the left edge of the screen to the right.

To move an application on the Application screen
1. When the Application screen is open, tap .
2. Make sure that Own order is selected under Sort apps.
3. Touch and hold the application until it becomes selected, then drag it to the new location.
To add an application shortcut to the Home screen
1 On the Application screen, touch and hold an application icon until it becomes selected, then drag the icon to the top of the screen. The Home screen opens.
2 Drag the icon to the desired location on the Home screen, then release your finger.

To arrange applications on the Application screen
1 When the Application screen is open, tap Sort apps.
2 Tap Sort apps, then select an option.

To uninstall an application from the Application screen
1 Touch and hold any area on the Application screen until the device vibrates. All applications that can be uninstalled are then indicated by Delete.
2 Select the application that you want to uninstall, then tap Delete.

Navigating applications
You can navigate between applications using the navigation keys, the favourites bar, and the recently used applications window, which lets you switch easily between all recently used applications. The navigation keys are the Home key, the Recent apps key and the Back key. Some applications get closed when you press the Home key to exit while others are paused or continue to run in the background. If an application is paused or running in the background, you can continue where you left off the next time you open the application.

1 Recently used applications window – Open a recently used application
2 Favourites bar – Use a shortcut to access applications or widgets
3 Recent apps key – Open the recently used applications window and the favourites bar
4 Home key – Exit an application and go back to the Home screen
5 Back key – Go back to the previous screen within an application or close the application

To open the recently used applications window
* Press .

To close all the recently used applications
* Tap and then tap .

To open a menu in an application
* While using the application, press .
! A menu is not available in all applications.
Small apps

Small apps are miniature apps that run on top of other applications on the same screen, to enable multi-tasking. For example, you can have a webpage open showing details of currency exchange rates and then open the Calculator small app on top of it and perform calculations. You can access your small apps via the favourites bar. To download more small apps, go to Google Play™.

To open a small app
1. To make the favourites bar appear, press.
2. Tap the small app that you want to open.

You can open several small apps at the same time.

To close a small app
- Tap on the small app window.

To download a small app
1. From the favourites bar, tap, then tap and tap.
2. Search for the small app that you want to download, then follow the instructions to download it and complete the installation.

To move a small app
- When the small app is open, touch and hold the top left corner of the small app, then move it to the desired location.

To minimise a small app
- When the small app is open, touch and hold the top left corner of the small app, then drag it to the right edge or to the bottom edge of the screen.

To rearrange the small apps in the favourites bar
- Touch and hold a small app and drag it to the desired position.

To remove a small app from the favourites bar
1. Touch and hold a small app, then drag it to.
2. Tap OK.

To restore a previously removed small app
1. Open the favourites bar, then tap.
2. Touch and hold the small app that you want to restore, then drag it into the favourites bar.

To add a widget as a small app
1. To make the favourites bar appear, press.
2. Tap > >.
3. Select a widget.
4. Enter a name for the widget, if desired, then tap OK.

Widgets

Widgets are small applications that you can use directly on your Home screen. They also function as shortcuts. For example, the Weather widget allows you to see basic weather information directly on your Home screen. But when you tap the widget, the full Weather application opens. You can download additional widgets from Google Play™.
To add a widget to the Home screen
1 Touch and hold an empty area on your Home screen until the device vibrates, then tap **Widgets**.
2 Find and tap the widget that you want to add.

To resize a widget
1 Touch and hold a widget until it magnifies and the device vibrates, then release the widget. If the widget can be resized, for example, the Calendar widget, then a highlighted frame and resizing dots appear.
2 Drag the dots inward or outward to shrink or expand the widget.
3 To confirm the new size of the widget, tap anywhere on the Home screen.

To move a widget
• Touch and hold the widget until it magnifies and the device vibrates, then drag it to the new location.

To remove a widget
• Touch and hold the widget until it becomes selected, then drag it to **Remove from Home screen**.

Shortcuts and folders
Use shortcuts and folders to manage your applications and keep your Home screen tidy.

1 Access an application using a shortcut
2 Access a folder containing applications
To add an application shortcut to your Home screen
1. Touch and hold an empty area on your Home screen.
2. In the customisation menu, tap Widgets > Apps.
3. Scroll through the list of applications and select an application. The selected application gets added to the Home screen.

In step 3, alternatively, you can tap Widgets > Shortcuts and then select an application from the list available. If you use this method to add shortcuts, some of the applications available allow you to add specific functionality to the shortcut.

To move an item on the Home screen
• Touch and hold the item until it becomes selected, then drag the item to the new location.

To remove an item from the Home screen
• Touch and hold the item until it becomes selected, then drag the item to Remove from Home screen on the top of the screen.

To create a folder on the Home screen
• Touch and hold an application icon or a shortcut until it becomes selected, then drag and drop it on top of another application icon or shortcut.

To add items to a folder on the Home screen
• Touch and hold an item until it becomes selected, then drag the item to the folder.

To rename a folder on the Home screen
1. Tap the folder to open it.
2. Tap the folder's title bar to show the Folder name field.
3. Enter the new folder name and tap Done.

Background and themes
You can adapt the Home screen to your own style using wallpapers and different themes.

To change your Home screen wallpaper
1. Touch and hold an empty area on your Home screen until the device vibrates.
2. Tap Wallpapers and select an option.

To set a theme
1. Touch and hold an empty area on your Home screen until the device vibrates.
2. Tap Themes.
3. Select an option and follow the instructions in your device.

When you change a theme, the background also changes in some applications.
Battery and power management

Your device has an embedded battery. You can keep track of your battery consumption and see how much power applications are using. You can remove apps and activate **Battery saver** to get more out of your battery. You can also view an estimate of how much battery time is left and adjust your settings to improve performance and make your battery last longer.

To view your battery consumption and estimated battery time
1. From your Home screen, tap 📲.
2. Find and tap **Settings > Battery usage**. An overview appears showing battery usage data and an estimated battery time.
3. Review the information, then proceed as required, for example, uninstall an application or restrict its usage.

To view how much battery power applications use
1. From your Home screen, tap 📲.
2. Find and tap **Settings > Apps**.
3. Select an application and review its battery consumption via **App info > Battery usage**.

Taking a screenshot

You can capture still images of any screen on your device as a screenshot. Screenshots you take are automatically saved in Album.

To take a screenshot
1. Press and hold down the power key until a prompt window appears.
2. Tap 📲.
   - You can also take a screenshot by pressing and holding the power key and volume down key at the same time. Once the screenshot is captured, you can release the keys.

To view your screenshot
- Drag the status bar fully downwards, then tap the screenshot you want to view.
- You can also view your screenshots by opening the Album application.

Recording your screen

You can use the screen recording feature to capture videos of what’s happening on your device’s screen. This feature is useful, for example, when you want to create tutorials or record videos of you playing a game on your device. Recorded video clips are automatically saved in Album.

Shortcuts and folders overview

<table>

</table>
To record your screen
1 Press and hold down the power key until a prompt window appears.
2 Tap "".
3 After the screen recording window opens, tap . The record screen function starts and a timer button is displayed.
4 To stop the recording, tap the timer button, then tap .

To record your screen when the front camera is activated
1 When the screen recording window opens, tap . A window opens showing a viewfinder for the front camera.
2 To start recording your screen and video captured by the front camera, tap .
3 To stop recording, tap the timer button, then tap .
4 To close the front camera viewfinder window, tap .

To view recent screen recordings
• Drag the status bar downwards, then tap to view the most recent recordings of your screen.

★ You can also view your screen recordings in the Album application.

Notifications
Notifications inform you of events such as new messages and calendar notifications as well as activities in progress such as file downloads. Notifications appear in the following places:
• The status bar
• The Notification panel
• The lock screen

To open or close the Notification panel
1 To open the Notification panel, drag the status bar downwards.
2 To close the Notification panel, drag the panel upwards.

To take action on a notification in the Notification panel
• Tap the notification.

To dismiss a notification from the Notification panel
• Place your finger on a notification and flick left or right.

To clear all notifications from the Notification panel
• Tap .
To take action on a notification from the lock screen
• Double-tap the notification.

To dismiss a notification from the lock screen
• Place your finger on the notification and flick left or right.

To expand a notification on the Notification panel
• Drag the notification downwards.
! Not all notifications are expandable.

To expand a notification on the lock screen
• Drag the notification downwards.
! Not all notifications are expandable.

Quick settings for interruptions
There are three modes available for interruptions on your device: Total silence, Priority only and Sound. Within each mode, you can determine how and when notifications can interrupt you, if at all. For example, you can set your device to only show you priority notifications during the hours you’re at work or block all notifications while you’re taking a nap. You can get quick access to the basic interruption and sound settings by pressing the volume key up or down.

1 Total silence - All interruptions get blocked, excluding alarms. There is still sound when alarms go off
2 Priority only - Only allow priority interruptions
3 Sound - Allow all interruptions

To set priority interruptions
1 From your Home screen, tap .
2 Find and tap Settings > Sound & notification > .

! For more information about settings for notifications and interruptions, see Notifications on page 33.

Notification light
The notification light informs you about battery status and some other events. For example, a flashing white light means there is a new message or a missed call. The notification light is enabled by default but can be disabled manually.

! When the notification light is disabled, it only lights up when there is a battery status warning, for example, when the battery level goes below 15 percent.
To enable the notification light

1 From your Home screen, tap 📱.
2 Find and tap Settings > Sound & notification.
3 Drag the slider beside Notification light to the right.

Use the Hangouts™ application to chat with friends online.

Identify music tracks that you hear playing in your surroundings, and get artist, album and other info.

Use YouTube™ to share and view videos from around the world.

Use the Backup and restore application to back up or restore content on your device, such as contacts, text messages, bookmarks, calendar data, etc.

Use the Smart Connect™ application to set what happens in your device when you connect or disconnect an accessory.

The Xperia™ Movie Creator automatically creates short videos of around 30 seconds in length using existing photos and videos. The application automatically determines the timeline to create its movie.

Use the Lifelog application to automatically log events about your daily life. For example, you can set goals and track your progress in achieving them or bookmark special moments.

Use the Support application to access user support in your device. For example, you can access a User guide, troubleshooting information, plus tips and tricks.

Some applications are not supported or listed by all networks and/or service providers in all areas.
Downloading applications

Downloading applications from Google Play™
Google Play™ is the official online Google store for downloading applications, games, music, movies and books. It includes both free and paid applications. Before you start downloading from Google Play™, make sure that you have a working Internet connection, preferably over Wi-Fi® to limit data traffic charges.

⚠️ To use Google Play™, you need to have a Google™ account. Google Play™ may not be available in all countries or regions.

To download an application from Google Play™
1. From the Home screen, tap 📱.
2. Find and tap Play Store.
3. Find an item you wish to download by browsing categories, or by using the search function.
4. Tap the item to view its details, and follow the instructions to complete the installation.

⚠️ Some applications may need to access data, settings and various functions on your device in order to work properly. Only install and give permissions to applications that you trust. You can view the permissions granted to a downloaded application and also change their status by tapping the application under Settings > Apps.

Downloading applications from other sources
When your device is set to allow downloads from sources other than Google Play™, you can download applications directly from other websites by following the relevant download instructions.

⚠️ Installing applications of unknown or unreliable origin can damage your device. Only download applications from reliable sources. Contact the application provider if you have any questions or concerns.

⚠️ If you are using a device with multiple users, only the owner, that is, the primary user, can allow downloads from sources other than Google Play™. Changes made by the owner affect all other users.

To allow downloading of applications from other sources
1. From your Home screen, tap 📱.
2. Find and tap Settings > Security.
3. Drag the slider beside Unknown sources to the right.
4. Tap OK.

⚠️ Some applications may need to access data, settings and various functions on your device in order to work properly. Only install and give permissions to applications that you trust. You can view the permissions granted to a downloaded application and also change their status by tapping the application under Settings > Apps.
Internet and networks

Browsing the web

The Google Chrome™ web browser for Android™ devices comes pre-installed in most markets. Go to http://support.google.com/chrome and click the "Chrome for Mobile" link to get more detailed information about how to use this web browser.

To browse with Google Chrome™

1. From your Home screen, tap 🔄.
2. Find and tap 🔄.
3. If you are using Google Chrome™ for the first time, select to either sign in to a Google™ account or browse with Google Chrome™ anonymously.
4. Enter a search term or web address in the search and address field, then tap Go on the keyboard.

Internet and MMS settings

To send multimedia messages, or to access the Internet when there is no available Wi-Fi® network, you must have a working mobile data connection with the correct Internet and MMS (Multimedia Messaging Service) settings. Here are some tips:

• For most mobile networks and operators, Internet and MMS settings come pre-installed on your device. You can then start using the Internet and send multimedia messages right away.
• It is possible to download these settings via Wi-Fi®.
• You can manually add, change or delete Internet and MMS settings on your device at any time. If you change or delete an Internet or MMS setting by mistake, download the Internet and MMS settings again.
• If you cannot access the Internet over a mobile network or if multimedia messaging is not working, even though the Internet and MMS settings have been downloaded successfully to your device, refer to the troubleshooting tips for your device at www.sonymobile.com/support/ for network coverage, mobile data, and MMS issues.
• If Battery saver mode is activated to save power, all mobile data traffic gets paused when the screen is off. If this causes connection problems, try excluding some applications and services from being paused, or deactivate Battery saver mode temporarily.
• If you are using a device with multiple users, only the owner, that is, the primary user, can download Internet and messaging settings from the Settings menu, but the downloaded settings are applicable to all users.

To download Internet and MMS settings

1. From your Home screen, tap 🔄.
2. Find and tap Settings > More > Internet settings.
3. Tap Accept. Once the settings have been downloaded successfully, ☑ appears in the status bar and mobile data traffic is turned on automatically.

If the settings cannot be downloaded to your device, check the signal strength of your mobile network. Move to an open location free from obstructions or get close to a window and then try again.

To add Internet and MMS settings manually

1. From your Home screen, tap 🔄.
2. Find and tap Settings > More > Mobile networks.
3. Tap Access Point Names.
4. Tap Name and enter a name as desired.
5. Tap APN and enter the access point name.
6. Enter all other information as required. If you don’t know what information is required, contact your network operator for more details.
7. When you’re done, tap ☑, then tap SAVE.
To view the downloaded Internet and MMS settings
1 From your Home screen, tap \( \text{Settings} \).
2 Find and tap Settings > More > Mobile networks.
3 Tap Access Point Names.
4 To view more details, tap any of the available items.

If you have several available connections, the active network connection is indicated by a marked button ▶.

Wi-Fi®

Use Wi-Fi® connections to surf the Internet, download applications, or send and receive emails. Once you have connected to a Wi-Fi® network, your device remembers the network and automatically connects to it the next time you come within range.

Some Wi-Fi® networks require you to log in to a web page before you can get access. Contact the relevant Wi-Fi® network administrator for more information.

Available Wi-Fi® networks may be open or secured:
• Open networks are indicated by next to the Wi-Fi® network name.
• Secured networks are indicated by next to the Wi-Fi® network name.

Some Wi-Fi® networks do not show up in the list of available networks because they do not broadcast their network name (SSID). If you know the network name, you can add it manually to your list of available Wi-Fi® networks.

To turn on Wi-Fi®
1 From your Home screen, tap \( \text{Settings} \).
2 Find and tap Wi-Fi.
3 Tap the on-off switch to turn on the Wi-Fi® function.

It may take a few seconds before Wi-Fi® is enabled.

To connect to a Wi-Fi® network automatically
1 From your Home screen, tap \( \text{Settings} \).
2 Find and tap Wi-Fi.
3 Tap the on-off switch to turn on the Wi-Fi function. All available Wi-Fi® networks are displayed.
4 Tap a Wi-Fi® network to connect to it. For secured networks, enter the relevant password. is displayed in the status bar once you are connected.

To add a Wi-Fi® network manually
1 From your Home screen, tap \( \text{Settings} \).
2 Find and tap Wi-Fi.
3 Tap > Add network.
4 Enter the Network name (SSID) information.
5 Tap > Security field.
6 If required, enter a password.
7 To edit some advanced options such as proxy and IP settings, mark the Advanced options checkbox and then edit as desired.
8 Tap Save.

Contact your Wi-Fi® network administrator to get the network SSID and password.

Increasing Wi-Fi® signal strength
There are a number of things you can do to increase the strength of a Wi-Fi® signal:
• Move your device closer to the Wi-Fi® access point.
• Move the Wi-Fi® access point away from any potential obstructions or interference.
• Don’t cover the Wi-Fi® antenna area of your device (the highlighted area in the illustration).

**Wi-Fi® settings**

When you are connected to a Wi-Fi® network or when there are Wi-Fi® networks available in your vicinity, it is possible to view the status of these networks. You can also enable your device to notify you whenever an open Wi-Fi® network is detected.

If you are not connected to a Wi-Fi® network, your device uses a mobile data connection to access the Internet (if you have set up and enabled a mobile data connection on your device). By adding a Wi-Fi® sleep policy, you can specify when to switch from Wi-Fi® to mobile data.

**To enable Wi-Fi® network notifications**
1. Turn on Wi-Fi®, if it is not already on.
2. From your Home screen, tap .
3. Find and tap *Settings* > *Wi-Fi*.
4. Tap ‣ > *Advanced*.
5. Drag the slider beside *Network notification* to the right.

**To view detailed information about a connected Wi-Fi® network**
1. From the Home screen, tap .
2. Find and tap *Settings* > *Wi-Fi*.
3. Tap the Wi-Fi® network that you are currently connected to. Detailed network information is displayed.

**To add a Wi-Fi® sleep policy**
1. From the Home screen, tap .
2. Find and tap *Settings* > *Wi-Fi*.
3. Tap ‣, then tap *Settings* > *Keep Wi-Fi on during sleep*.
4. Select an option.

**WPS**

WPS (Wi-Fi® Protected Setup) is a computing standard that helps you establish secure wireless network connections. If you have little background knowledge of wireless security, WPS makes it easy for you to set up Wi-Fi Protected Access (WPA) encryption to secure your network. You can also add new devices to an existing network without entering long passwords.

Use one of these methods to enable WPS:
• Push button method – simply push a button on a WPS-supported device, for example, a router.
• PIN method – your device creates a random PIN (Personal Identification Number), which you enter on the WPS-supported device.

To connect to a Wi-Fi® network using a WPS button
1 From your Home screen, tap.
2 Find and tap Settings > Wi-Fi.
3 Turn on Wi-Fi® if it is not already on.
4 Tap 📸 > Settings > WPS Push Button, then press the WPS button on the WPS-supported device.

To connect to a Wi-Fi® network using a WPS PIN
1 From your Home screen, tap.
2 Find and tap Settings > Wi-Fi.
3 Turn on Wi-Fi® if it is not already on.
4 Tap 📸 > Settings > WPS PIN Entry.
5 On the WPS-supported device, enter the PIN that appears on your device.

Sharing your mobile data connection
You can share your mobile data connection with other devices in several ways:
• USB tethering – share your mobile data connection with a single computer using a USB cable.
• Bluetooth® tethering – share your mobile data connection with up to five other devices via Bluetooth®.
• Portable Wi-Fi® hotspot – share your mobile data connection simultaneously with up to 8 other devices, including devices that support WPS technology.

To share your data connection using a USB cable
1 Deactivate all USB cable connections to your device.
2 Using the USB cable that came with your device, connect your device to a computer.
3 From your Home screen, tap.
4 Find and tap Settings > More > Tethering & portable hotspot.
5 Drag the slider beside USB tethering to the right, then tap OK if prompted. 😎 is displayed in the status bar once you are connected.
6 To stop sharing your data connection, drag the slider beside USB tethering to the left or disconnect the USB cable.

! You cannot share your device’s data connection and SD card over a USB cable at the same time.
To share your mobile data connection with another Bluetooth® device

1. Make sure that your device and the Bluetooth® device are paired with each other and that mobile data traffic is activated on your device.
2. Your device: From your Home screen, tap 📱.
3. Find and tap Settings > More > Tethering & portable hotspot and then drag the slider beside Bluetooth tethering to the right.
4. Bluetooth® device: Set up the device so that it obtains its network connection using Bluetooth®. If the device is a computer, refer to the relevant instructions to complete the setup. If the device runs on the Android™ operating system, tap the settings icon beside the name of the device that it is paired with under Settings > Bluetooth > Paired devices, then mark the Internet access checkbox.
5. Your device: Wait for 📱 to appear in the status bar. Once it appears, the setup is complete.
6. To stop sharing your mobile data connection, drag the slider beside Bluetooth tethering to the left.

The Bluetooth tethering function is turned off every time you turn off your device or turn off the Bluetooth® function.

For more information about pairing and turning on mobile data traffic, see To pair your device with another Bluetooth® device on page 122 and To add a virtual private network on page 46.

To use your device as a portable Wi-Fi® hotspot

1. From your Home screen, tap 📱.
2. Find and tap Settings > More > Tethering & portable hotspot.
3. Tap Portable Wi-Fi hotspot settings > Configure Wi-Fi hotspot.
4. Enter the Network name (SSID) information.
5. To select a security type, tap the Security field. If required, enter a password.
6. Tap Save.
7. Tap 📱 and drag the slider beside Portable Wi-Fi hotspot to the right.
8. If prompted, tap OK to confirm. 📱 appears in the status bar once the portable Wi-Fi® hotspot is active.
9. To stop sharing your data connection via Wi-Fi®, drag the slider beside Portable Wi-Fi hotspot to the left.

To allow a WPS-supported device to use your mobile data connection

1. Make sure that your device is functioning as a portable Wi-Fi® hotspot.
2. From your Home screen, tap 📱.
3. Find and tap Settings > More > Tethering & portable hotspot > Portable Wi-Fi hotspot settings.
4. Drag the slider beside Discoverable to the right.
5. Under Configure Wi-Fi hotspot, make sure that your portable hotspot is secured by a password.
6. Tap WPS Push Button, then follow the relevant instructions. Alternatively, tap > WPS PIN Entry, then enter the PIN that appears on the WPS-supported device.

To rename or secure your portable hotspot

1. From the Home screen, tap 📱.
2. Find and tap Settings > More > Tethering & portable hotspot.
3. Tap Portable Wi-Fi hotspot settings > Configure Wi-Fi hotspot.
4. Enter the Network name (SSID) for the network.
5. To select a security type, tap the Security field.
6. If required, enter a password.
7. Tap Save.

Controlling data usage

You can keep track of the amount of data transferred to and from your device over your mobile data or Wi-Fi® connection during a given period. For example, you can
view the amount of data used by individual applications. For data transferred over your mobile data connection, you can also set data usage warnings and limits to avoid additional charges.

⚠ Adjusting data usage settings can help you keep greater control over data usage but cannot guarantee the prevention of additional charges.

**To turn data traffic on or off**
1. From your Home screen, tap 📲.
2. Find and tap **Settings > Data usage**.
3. Drag the slider beside **Mobile data** to turn data traffic on or off.

⚠ When data traffic is turned off, your device can still establish Wi-Fi®, NFC and Bluetooth® connections.

**To set a data usage warning**
1. Make sure that mobile data traffic is turned on.
2. From your Home screen, tap 📲.
3. Find and tap **Settings > Data usage**.
4. To set the warning level, drag the warning line to the desired value. You receive a warning notification when the amount of data traffic approaches the level you set.

**To set a mobile data usage limit**
1. Make sure that mobile data traffic is turned on.
2. From your Home screen, tap 📲.
3. Find and tap **Settings > Data usage**.
4. Drag the slider beside **Limit mobile data usage** to the right, then tap **OK**.
5. To set the mobile data usage limit, drag the data limit line to the desired value.

⚠ Once your mobile data usage reaches the set limit, mobile data traffic on your device gets turned off automatically.

**To control the data usage of individual applications**
1. From your Home screen, tap 📲.
2. Find and tap **Settings > Data usage**.
3. Tap the application that you want to control, then drag the slider beside **Restrict app background data** to the right and tap **OK**.
4. To access more specific settings for the application (if available), tap **App settings** and make the desired changes.

⚠ The performance of individual applications may be affected if you change the related data usage settings.

**To check your data usage**
1. From your Home screen, tap 📲.
2. Find and tap **Settings > Data usage**.
3. Tap ⚛, then tap **Show Wi-Fi**.
4. To view information about the amount of data transferred via Wi-Fi®, tap the **Wi-Fi** tab.
5. To view the information about the amount of data transferred via mobile data connection, tap the **Mobile** tab.

**Selecting mobile networks**

Your device automatically switches between mobile networks depending on which mobile networks are available where you are. You can also manually set your device to use a particular mobile network mode, for example, WCDMA or GSM.

Different status icons are displayed in the status bar depending on the type or mode of network that you are connected to. Refer to **Status icon** on page 35 to see what the different status icons look like.
To select a network mode
1. From your Home screen, tap Settings > More > Mobile networks.
2. Tap Preferred network type, then select a network mode.

To select another network manually
1. From your Home screen, tap Settings > More > Mobile networks > Network operators.
2. Tap Search mode, then select Manual.
3. Select a network.

If you select a network manually, your device will not search for other networks, even if you move out of range of the manually selected network.

To activate automatic network selection
1. From your Home screen, tap Settings > More > Mobile networks > Network operators.
2. Tap Search mode, then select Automatic.

Virtual private networks (VPNs)
Use your device to connect to virtual private networks (VPNs), which allow you to access resources inside a secured local network from a public network. For example, VPN connections are commonly used by corporations and educational institutions for users who need to access intranets and other internal services when they are outside of the internal network, for example, when they are travelling.

VPN connections can be set up in many ways, depending on the network. Some networks may require you to transfer and install a security certificate on your device. For detailed information about how to set up a connection to your virtual private network, contact the network administrator of your company or organisation.

If you are using a device with multiple users, you may need to log in as the owner, that is, the primary user, to adjust the settings for VPN.

To add a virtual private network
1. From your Home screen, tap Settings > More > VPN.
2. Tap +.
3. Select the type of VPN to add.
4. Enter your VPN settings.
5. Tap Save.

To connect to a virtual private network
1. From your Home screen, tap Settings > More > VPN.
2. In the list of available networks, tap the VPN that you want to connect to.
3. Enter the required information.
4. Tap Connect.

To disconnect from a virtual private network
1. Drag the status bar downwards.
2. Tap the notification for the VPN connection to turn it off.
Synchronising data on your device

Synchronising with online accounts

Synchronise your device with contacts, email, calendar events and other information from online accounts, for example, email accounts such as Gmail™ and Exchange ActiveSync, Facebook™, Flickr™ and Twitter™. You can synchronise data automatically for such accounts by activating the auto-sync function. Or you can synchronise each account manually.

To set up an online account for synchronisation
1. From your Home screen, tap 📱.
2. Tap Settings > Accounts > Add account, then select the account that you want to add.
3. Follow the instructions to create an account, or sign in if you already have an account.

To synchronise manually with an online account
1. From your Home screen, tap 📱 > Settings > Accounts.
2. Under Accounts, tap the name of the account that you want to synchronise with. A list of items appears showing what can be synchronised with the account.
3. Tap the items that you want to synchronise.

To remove an online account
1. From your Home screen, tap 📱 > Settings > Accounts.
2. Under Accounts, tap the name of the account that you want to remove.
3. Tap ; then tap Remove account.
4. Tap Remove account again to confirm.

Synchronising with Microsoft® Exchange ActiveSync®

If your company uses a Microsoft Exchange ActiveSync account, you can access your corporate email messages, calendar appointments and contacts directly on your device. After setup, you can find your information in the Email, Calendar and Contacts applications.

To set up an EAS account for synchronisation
1. Make sure that you have your domain and server details available (as provided by your corporate network administrator).
2. From your Home screen, tap 📱.
3. Tap Settings > Accounts > Add account > Exchange ActiveSync.
4. Enter your corporate email address and password.
5. Tap Next. Your device begins to retrieve your account information. If a failure occurs, enter the domain and server details for your account manually and then tap Next.
6. Tap OK to allow your corporate server to control your device.
7. Select what data you want to sync with your device, such as contacts and calendar entries.
8. If desired, activate the device administrator to allow your corporate server to control certain security features on your device. For example, you can allow your corporate server to set password rules and set storage encryption.
9. When the setup is done, enter a name for the corporate account.

! When you change the login password for an EAS account on your computer, you have to log in again to the EAS account on your device.
To change the settings of an EAS account
1 From your Home screen, tap 📱.
2 Tap Email, then tap 📬.
3 Tap Settings and select an EAS account, then change the settings of the EAS account as desired.

To set a synchronisation interval for an EAS account
1 From your Home screen, tap 📱.
2 Tap Email, then tap 📬.
3 Tap Settings and select an EAS account.
4 Tap Check frequency > Check frequency and select an interval option.

To remove an EAS account
1 From your Home screen, tap 📱 > Settings > Accounts.
2 Under Accounts, tap Exchange ActiveSync, then select the EAS account that you want to remove.
3 Tap ; then tap Remove account.
4 Tap Remove account again to confirm.
Basic settings

Accessing settings
View and change settings for your device from the Settings menu. The Settings menu is accessible from both the Application screen and the Quick settings panel.

To open the device settings menu from the Application screen
1. From your Home screen, tap 📲.
2. Tap Settings.

To view information about your device
1. From your Home screen, tap 📲.
2. Find and tap Settings > About phone.

To activate the screen using Tap to wake up mode
1. Make sure that Tap to wake up mode is turned on. To turn it on, tap Settings > Display, then drag the slider beside Tap to wake up to the right.
2. Double-tap the screen.

To open the Quick settings panel
- Using two fingers, drag the status bar downwards.

To select which settings to display on the Quick settings panel
1. Using two fingers, drag the status bar downwards, then tap 📲.
2. In the bar at the top of the screen, touch and hold the icon for the quick setting that you want to add, then drag and drop it in the lower part of the screen.

To rearrange the Quick settings panel
1. Using two fingers, drag the status bar downwards, then tap 📲.
2. Touch and hold an icon, then move it to the desired position.

Volume settings
You can adjust the ringtone volume for incoming calls and notifications as well as for music and video playback.

To adjust the ringtone volume with the volume key
- Press the volume key up or down.

To adjust the media playing volume with the volume key
- When playing music or watching video, press the volume key up or down even when the screen is locked.

To turn on vibrate mode
- Press the volume key down or up until ☢️ appears.

To adjust the volume levels
1. From your Home screen, tap 📲.
2. Find and tap Settings > Sound & notification.
3. Drag the volume sliders to the desired positions.
   ! You can also press the volume key up or down to adjust the ringtone and media playback volume levels even when the screen is locked.
To set your device to vibrate for incoming calls
1. From your Home screen, tap 📞.
2. Find and tap **Settings > Sound & notification**.
3. Drag the slider beside **Also vibrate for calls** to the right.

To set a ringtone
1. From your Home screen, tap 📞.
2. Find and tap **Settings > Sound & notification > Phone ringtone**.
3. Select an option from the list or tap 🔴 then tap 📷 and select a music file that is saved to your device.
4. To confirm, tap **Done**.

To set the notification sound
1. From your Home screen, tap 📞.
2. Find and tap **Settings > Sound & notification > Phone ringtone**.
3. Select an option from the list or tap 🔴 then tap 📷 and select a music file that is saved to your device.
4. To confirm, tap **Done**.

- Some applications have their own specific notification sounds, which you can select from the application settings.

To select the notification sound
1. From your Home screen, tap 📞.
2. Find and tap **Settings > Sound & notification > Phone ringtone**.
3. Select an option from the list or tap 🔴 then tap 📷 and select a music file that is saved to your device.
4. To confirm, tap **Done**.

To enable touch tones
1. From your Home screen, tap 📞.
2. Find and tap **Settings > Sound & notification > Other sounds**.
3. Drag the sliders beside **Dialpad tones** and **Touch sounds** to the right.

Do not disturb mode settings
You can set your device to Do not disturb mode and decide how long your device will be in Do not disturb mode manually. You can also preset when your device will be in Do not disturb mode automatically.

- **No time limit** Keep the device silent until you manually turn the sound back on.
- **For one hour** Keep the device silent for one hour. You can tap the minus and plus icons to adjust the duration.

To activate Do not disturb mode
1. Press the volume key down until 🔄 appears.
2. Select a time interval.

To quickly shift between Silent/Vibrate/Sound mode
1. Press the volume key down or up until 🔄, 🔴, or 🔫 appears.
2. Tap 🔴, 🔫, or 🔫 to quickly shift between Silent/Vibrate/Sound mode.

To schedule Do not disturb mode time intervals
1. Press the volume key down until 🔄 appears.
2. Tap 🔄.
3. Find and tap **Days** and mark the checkboxes for the relevant days, then tap **Done**.
4. To adjust the start time, tap **Start time** and select a value, then tap **OK**.
5. To adjust the end time, tap **End time** and select a value, then tap **OK**. Your device stays in Do not disturb mode during the selected time interval.

Setting exceptions for Do not disturb mode
You can select which types of notifications are allowed to sound in Do not disturb mode and you can filter exceptions based on who the notifications come from. The most common types of exceptions include:
• Events and reminders
• Calls
• Messages
• Alarms

To allow exceptions to sound in Do not disturb mode
1 Press the volume key down until ø appears.
2 Drag the slider beside Allow exceptions to the right.

To set notifications as exceptions in Do not disturb mode
1 Press the volume key down until ø appears.
2 Tap 📣.
3 Under Exceptions in Do not disturb mode, drag the relevant sliders to the right.

To associate exceptions with specific contact types
1 Press the volume key down until ø appears.
2 Tap 📣.
3 If you have select calls and messages as exceptions, find and tap Calls/messages from.
4 Select an option.

To allow alarms to sound in Do not disturb mode
1 Press the volume key down until ø appears.
2 Drag the slider beside Allow alarm to the right.

To allow exceptions to sound during a preset Do not disturb mode time interval
1 Press the volume key down until ø appears.
2 Tap 📣.
3 Drag the slider beside Exceptions to the right.

Screen settings

To adjust the screen brightness
1 From your Home screen, tap 📱.
2 Find and tap Settings > Display > Brightness level.
3 Drag the slider to adjust the brightness.

Lowering the brightness level increases battery performance.

To set the screen to vibrate on touch
1 From your Home screen, tap 📱.
2 Find and tap Settings > Sound & notification > Other sounds.
3 Drag the slider beside Vibrate on touch to the right. The screen now vibrates when you tap soft keys and certain applications.

To adjust the idle time before the screen turns off
1 From your Home screen, tap 📱.
2 Find and tap Settings > Display > Sleep.
3 Select an option.

To turn off the screen quickly, briefly press the power key ⟨⟩.

Smart backlight control
The smart backlight control keeps the screen on as long as the device is held in your hand. Once you put down the device, the screen turns off according to your sleep setting.
To turn on the Smart backlight control function
1 From your Home screen, tap 📱.
2 Find and tap Settings > Display > Smart backlight control.
3 Drag the slider to the right.

Screen pinning
Use screen pinning to set your device to display only the screen for a specific application. For example, if you are playing a game and you accidentally touch the Home navigation key, the screen pinning feature prevents the active game app screen from being minimised. You can also use this feature when you lend your device to another person to make it harder for them to access more than one screen or application. For example, you can lend your phone to somebody to make a phone call and pin the screen to the Phone application so that the person can't easily use other apps such as Messaging or Email.

To activate screen pinning
1 From your Home screen, tap 📱.
2 Find and tap Settings > Security > Screen pinning.
3 Drag the slider to the right.

To pin a screen
1 Make sure that screen pinning is activated on your device.
2 Open an app and go to the screen that you want to pin.
3 Tap 📱.
4 To display 📱, swipe upwards.
5 Tap 📱.
6 If you have a PIN, password, or pattern set up as your screen lock, mark the relevant checkbox to make sure the pattern, PIN or password is needed to unlock the device before the screen can be unpinned.
7 Tap START.

To unpin a screen
1 On the pinned screen, touch and hold 📱 and 📱 at the same time.
2 Release both buttons.

If you marked a security option when you pinned the screen, you have to enter your pattern, PIN or password to unlock the device before the screen can be unpinned.

Application settings
Some apps will ask for permissions once you start using them. You can allow or deny permissions individually for each app, either from the Settings menu or from the Permission confirm dialog. Permission requirements depend on the app’s design.

Allowing or denying permissions
You can choose whether to allow or deny permissions when the dialog is shown. If you have used another Android version previously, most apps will have already been granted the necessary permissions.

To allow a permission
1 To allow a permission, tap Allow.
2 When the confirm dialog appears for the second time, you can choose the Never ask again option if you wish.
3 A dialog will also explain why the app needs the permissions and what it uses them for specifically. To dismiss this dialog, tap OK.
To deny a permission

• To deny a permission, tap Deny when the dialog is shown.

⚠ Some applications can still be used even if you have denied permissions.

Critical permissions

Some permissions are mandatory for apps to work as intended. In such cases, a dialog will inform you.

To allow critical permissions

1 To allow a permission, tap Continue > App info > Permission.
2 Find the critical permission you need.
3 Drag the slider to the right.

⚠ You can also manage permissions in Settings > Apps. Tap an app and change the permissions as desired.

To configure applications

1 From your Home screen, tap Settings.
2 Find and tap Settings > Apps.
3 Select a configuration option, for example App permissions, then choose an application that you want to configure.

Application linking

Your device can determine the default app to handle a particular web link. This means that if the link is set, you don’t need to select an app each time you open a link. You can change the default app any time you want.

To manage app links from the Settings menu

1 From your Home screen, tap Settings.
2 Find and tap Settings > Apps.
3 Tap ⏰ and find App links.
4 Select the app for which you want to set the supported links.
5 Set the App links property to Open in this app option.

Resetting your applications

You can reset an application or clear application data if your application stops responding or causes issues with your device.

To reset application preferences

1 From your Home screen, tap Settings.
2 Find and tap Settings > Apps.
3 Tap ⏰, then tap Reset app preferences.

⚠ Resetting application preferences does not delete any application data from your device.

To clear application data

1 From your Home screen, tap Settings.
2 Find and tap Settings > Apps.
3 Select an application or service, then tap Storage > CLEAR DATA.

⚠ When you clear application data, data for the selected application is deleted from your device permanently. The option to clear application data is not available for all applications or services.
To clear application cache
1. From your Home screen, tap 📱.
2. Find and tap Settings > Apps.
3. Select an application or service, then tap Storage > CLEAR CACHE.

€ The option to clear the application cache is not available for all applications or services.

To clear the application default setting
1. From your Home screen, tap 📱.
2. Find and tap Settings > Apps.
3. Select an application or service, then tap Open by default > CLEAR DEFAULTS.

€ The option to clear the application default setting is not available for all applications or services.

Daydream
Daydream is an interactive screen saver that automatically displays colours, photos or a slideshow while your device is docked or charging and the screen is idle.

 владельц On a device with multiple users, each user can have individual Daydream settings.

To activate the Daydream screen saver
1. From your Home screen, tap 📱.
2. Find and tap Settings > Display > Daydream.
3. Drag the slider to the right.

To select content for the Daydream screen saver
1. From your Home screen, tap 📱.
2. Find and tap Settings > Display > Daydream.
3. Drag the slider to the right.
4. Select what you want to display when the screen saver is active.

To set when the Daydream screen saver starts
1. From your Home screen, tap 📱.
2. Find and tap Settings > Display > Daydream.
3. Drag the slider to the right.
4. To activate the Daydream screen saver immediately, tap ⌚️, then tap Start now.
5. To set automatic activation options, tap ⌚️, then tap When to daydream and select an option.

Language settings
You can select a default language for your device and change it again at a later time. You can also change the writing language for text input. See Personalising the on-screen keyboard on page 62.

To change the language
1. From the Home screen, tap 📱.
2. Find and tap Settings > Language & input > Language.
3. Select an option.
4. Tap OK.

€ If you select the wrong language and cannot read the menu texts, find and tap 📱. Then select the text beside 📱 and select the first entry in the menu that opens. You can then select the language you want.
Date and time

You can change the date and time on your device.

To set the date manually
1. From the Home screen, tap 📅.
2. Find and tap Settings > Date & time.
3. Unmark the Automatic date & time checkbox, if it is marked.
4. Tap Set date.
5. Scroll up and down to select the desired date.
6. Tap OK.

To set the time manually
1. From your Home screen, tap 📅.
2. Find and tap Settings > Date & time.
3. Unmark the Automatic date & time checkbox if it is marked.
4. Tap Set time.
5. Select the relevant values for the hour and minute.
6. Tap OK.

To set the time zone
1. From your Home screen, tap 📅.
2. Find and tap Settings > Date & time.
3. Unmark the Automatic time zone checkbox, if it is marked.
4. Tap Select time zone.
5. Select an option.

X-Reality™ for mobile

Sony’s X-Reality™ for mobile technology improves the viewing quality of photos and videos after you take them, giving you clearer, sharper and more natural images. X-Reality™ for mobile is turned on by default, but you can turn it off if you want to reduce battery consumption.

To turn on X-Reality™ for mobile
1. From your Home screen, tap 📅.
2. Find and tap Settings > Display > Image enhancement.
3. Tap the X-Reality for mobile radio button if it is not already selected.

Super-vivid mode

Super-vivid mode enhances the colour brightness and saturation of your photos and videos while you view them on your device.

To turn on Super-vivid mode
1. From your Home screen, tap 📅.
2. Find and tap Settings > Display > Image enhancement.
3. Tap the Super-vivid mode radio button if it is not already selected.

Enhancing the sound output

You can enhance the sound of your device by manually enabling individual sound settings such as Equaliser and Surround sound. You can also enable the Dynamic normaliser to minimise volume differences between songs or videos.

To enhance the sound output manually
1. From your Home screen, tap 📅.
2. Find and tap Settings > Sound & notification > Audio settings.
3. Drag the slider beside ClearAudio+ to the right.
To adjust the sound settings manually
1 From the Home screen, tap 📲.
2 Find and tap Settings > Sound & notification > Audio settings.
3 Drag the slider beside ClearAudio+ to the left.
4 Tap Sound effects > Equaliser.
5 Adjust the sound settings by dragging the frequency band buttons up or down.
★ The manual adjustment of sound output settings has no effect on voice communication applications. For example, there is no change in the voice call sound quality.

To minimise volume differences using the Dynamic normaliser
1 From the Home screen, tap 📲.
2 Find and tap Settings > Sound & notification > Audio settings.
3 Drag the slider beside Dynamic normaliser to the right.

Noise cancellation
Your device supports noise cancelling headsets. By using a noise cancelling headset with your device, you can get much clearer audio quality when listening, for example, to music in a noisy environment, such as on a bus, a train or a plane. You can also use this feature to create a silent environment in which to study, work or read.
★ To ensure optimal performance, noise cancelling headsets from Sony are recommended.

To use a noise cancelling headset
1 Connect the noise cancelling headset to your device.
2 From your Home screen, tap 📲 > Settings > Sound & notification > Accessory settings > Noise cancelling, then drag the slider beside Noise cancelling to the right.
3 If you want Noise cancelling to be enabled only during music or video playback or when the screen is active, drag the slider beside Power saver mode to the right.
4 If you want Noise cancelling to be enabled for as long as the headset is connected, drag the slider beside Power saver mode to the left.
★ A noise cancelling headset may not be included with your device at purchase.

To adjust the settings to the noise environment
1 Make sure a noise cancelling headset is connected to your device.
2 From your Home screen, tap 📲.
3 Find and tap Settings > Sound & notification > Accessory settings > Noise cancelling > Noise environment.
4 Select the relevant noise environment type, then tap OK.

Multiple user accounts
Your device supports multiple user accounts so that different users can log in separately to the device and use it. Multiple user accounts work well in situations where you share the same device with other people or lend your device to someone to use for a while. The user who sets up the device for the first time becomes the owner of the device. Only the owner can manage the accounts of other users. Apart from the owner account, there are two different types of accounts:
• Regular User: This account type is suitable for someone who regularly uses your device.
• Guest User: Enable the guest account option for someone who just wants to use your device temporarily.
★ Some features are only available to the owner. For example, only the owner can allow downloads from sources other than Google Play™.
About the Regular User account

By adding Regular User accounts, you can allow different users to have different home screens, wallpapers and general settings. They also get separate access to applications and memory storage for files such as music and photos. You can add up to three regular user accounts on your device.

To add a regular user account
1. Make sure you are logged in as the owner, that is, the user who set up the device for the first time.
2. From your Home screen, tap ".
3. Find and tap Settings > Users > Add user.
4. Tap OK > SET UP NOW. The screen locks and an icon representing the newly added user appears in the top right corner.
5. Unlock the screen, for example, by swiping or entering your PIN.
6. Follow the on-screen instructions to complete the procedure.

You can also add a regular user account from the status bar on any screen. Just drag the status bar downwards using two fingers and tap the user icon, then tap Add user.

To allow a regular user to make phone calls and use SMS
1. Make sure you are logged in as the owner.
2. From your Home screen, tap ".
3. Find and tap Settings > Users.
4. Tap beside the name of the relevant user, then drag the slider beside Turn on phone calls and SMS to the right.

To delete a regular user account from your device
1. Make sure you are logged in as the owner.
2. From your Home screen, tap ".
3. Find and tap Settings > Users.
4. Tap beside the name of the user that you want to delete, then tap Delete from this device > Delete.

About the Guest User account

If someone just wants to use your device temporarily, you can enable a guest account for this user. In guest mode, your device starts up as a freshly installed system with only the pre-installed apps. Once your guest is finished using your device, you can wipe the session clean so that the next guest can start fresh. The guest user account is pre-installed and cannot be deleted.

To set up the guest user account
1. Make sure you are logged in as the owner, that is, the user who set up the device for the first time.
2. From your Home screen, tap ".
3. Find and tap Settings > Users > Guest.
4. Follow the on-screen instructions to complete the procedure.

You can also set up a guest user account from the status bar on any screen. Just drag the status bar downwards using two fingers and tap the user icon, then tap Add guest.

To allow the guest user to make phone calls
1. Make sure you are logged in as the owner.
2. From your Home screen, tap ".
3. Find and tap Settings > Users.
4. Tap beside Guest, then drag the slider beside Turn on phone calls to the right.
To clear the guest session data
1 Make sure you are logged in as a guest user.
2 From your Home screen, tap 📱.
3 Find and tap Settings > Users.
4 Find and tap Remove guest.
5 Tap Remove.

⚠️ You can also clear the guest session from the status bar on any screen. Just drag the status bar downwards using two fingers and tap the user icon, then tap Remove guest.

Switching between multiple user accounts

To switch between multiple user accounts
1 To view the list of users, drag the status bar downwards using two fingers, then tap the user icon at the top right of the screen.
2 Tap the icon representing the user account that you want to switch to.
3 If a password has been set for the account, enter this password to log in. Otherwise, just unlock the screen.

⚠️ When you switch to the guest account, tap Start again if you want to wipe the previous session or tap Yes, continue to continue the previous session.

Settings for multiple user accounts

There are three different types of settings on devices with multiple users:

• Settings that can be changed by any user and affect all users. Examples include language, Wi-Fi®, Airplane mode, NFC and Bluetooth®.
• Settings that only affect an individual user account. Examples include automatic data syncing, screen lock, various accounts added, and wallpaper.
• Settings that are only visible to the owner and affect all users, for example, VPN settings.
Typing text

On-screen keyboard

You can enter text with the on-screen QWERTY keyboard by tapping each letter individually, or you can use the Gesture input feature and slide your finger from letter to letter to form words. If you prefer to use a smaller version of the on-screen keyboard and input text using only one hand, you can activate the one-handed keyboard instead.

You can select up to three languages for text input. The Smart language detection feature detects the language that you are using and predicts the words for that language as you type. Some applications open the on-screen keyboard automatically, for example, email and text messaging applications.

To display the on-screen keyboard to enter text

- Tap a text entry field.

To use the on-screen keyboard in landscape orientation

- When the on-screen keyboard is displayed, turn the device sideways.

* You may need to adjust the settings in some applications to enable landscape orientation.

To enter text character by character

1. To enter a character visible on the keyboard, tap the character.
2. To enter a character variant, touch and hold a regular keyboard character to get a list of available options, then select from the list. For example, to enter "é", touch and hold "e" until other options appear, then, while keeping your finger pressed on the keyboard, drag to and select "é".

To enter a period

- After you enter a word, double-tap the space bar.

To enter text using the Gesture input function

1. When the on-screen keyboard is displayed, slide your finger from letter to letter to trace the word that you want to write.
2. After you finish entering a word, lift up your finger. A word suggestion appears based on the letters that you have traced.
3. If the word that you want does not appear, tap to see other options and select accordingly. If the desired option does not appear, delete the entire word and trace it again, or enter the word by tapping each letter individually.
To change the Gesture input settings
1 When the on-screen keyboard is displayed, tap 123.
2 Tap , then tap Keyboard settings.
3 To activate or deactivate the Gesture input function, drag the slider beside Gesture input to the on or off position.

To use the one-handed keyboard
1 Open the on-screen keyboard in portrait mode, then tap 123.
2 Tap , then tap One-handed keyboard.
3 To move the one-handed keyboard to the left side or right side of the screen, tap ← or → accordingly.

To return to using the full on-screen keyboard, tap ．

Phonepad

The Phonepad is similar to a standard 12-key telephone keypad. It gives you predictive text and multi-tap input options. You can activate the Phonepad text input method via the keyboard settings. The Phonepad is only available in portrait orientation.

1 Choose a text input option. You can tap each character once and use word suggestions, or keep tapping the key until the desired character is selected.
2 Delete a character before the cursor.
3 Enter a carriage return or confirm text input.
4 Enter a space.
5 Display symbols and smileys.
6 Display numbers.
7 Change the character case and turn on the caps lock.

To open the Phonepad for the first time
1 Tap a text entry field, then tap 123.
2 Tap , then tap Keyboard settings.
3 Tap Portrait keyboard, then select the Phonepad option.

To enter text using the Phonepad
• When appears in the Phonepad, tap each character key only once, even if the letter you want is not the first letter on the key. Tap the word that appears or tap to view more word suggestions and select a word from the list.
• When appears in the Phonepad, tap the on-screen key for the character you want to enter. Keep tapping this button until the desired character is selected. Then do the same for the next character you want to enter, and so on.

To enter numbers using the Phonepad
• When the Phonepad is displayed, tap 123. A Phonepad with numbers appears.
To insert symbols and smileys using the Phonepad
1 When the Phonepad is displayed, tap 📣. A grid with symbols and smileys appears.
2 Scroll up or down to view more options. Tap a symbol or smiley to select it.

Entering text using voice input
When you enter text, you can use the voice input function instead of typing the words. Just speak the words that you want to enter. Voice input is an experimental technology from Google™, and is available for a number of languages and regions.

To enable voice input
1 When the on-screen keyboard is displayed, tap 📣.
2 Tap 🎤, then tap Keyboard settings.
3 Drag the slider beside Google™ voice typing key to the right.
4 Tap 🎤 to save your settings. A microphone icon 🎤 now appears on your on-screen keyboard.

To enter text using voice input
1 Open the on-screen keyboard.
2 Tap ✍. When ✍ appears, speak to enter text.
3 When you’re finished, tap ✍ again. The suggested text appears.
4 Edit the text manually if necessary.

To make the keyboard appear and enter text manually, tap 📣.

Editing text
You can select, cut, copy and paste text as you write. You can access the editing options by double-tapping the entered text. The editing options then become available via an application bar.

Application bar
The following actions are available on the selected text:
• Cut
• Copy
• Paste
• Share
• Select all

The Paste option only appears when you have text saved on the clipboard.

To select text
1 Enter some text, then double-tap the text. The word you tap gets highlighted by tabs on both sides.
2 Drag the tabs left or right to select more text.

To edit text
1 Enter some text, then double-tap the entered text to make the application bar appear.
2 Select the text that you want to edit, then use the application bar to make your desired changes.

To use the magnifier
• When you enter text, tap and hold on the text field to view the text magnified and to place the cursor where you want within the text field.
Personalising the on-screen keyboard

When entering text using the on-screen keyboard, you can access keyboard and other text input settings that help you, for example, to set options for writing languages, text prediction and correction. You can get word suggestions for one language at a time by deactivating the Smart language detection feature.

The keyboard can use text that you have written in messaging and other applications to learn your writing style. There is also a Personalisation guide that runs you through the most basic settings to get you started quickly. You can select to use other keyboards and switch between keyboards. For example, you can select the Xperia™ Chinese keyboard or the Xperia™ Japanese keyboard.

To access the on-screen keyboard settings

1. When you enter text using the on-screen keyboard, tap .
2. Tap , then tap Keyboard settings and change the settings as desired.
3. To add a writing language for text input, tap Writing languages and mark the relevant checkboxes.
4. Tap OK to confirm.

To change the word suggestion settings

1. When you enter text using the on-screen keyboard, tap .
2. Tap , then tap Keyboard settings > Word suggestions.
3. Select an option.

To select a keyboard

1. When you enter text using the on-screen keyboard, tap at the bottom right of the screen.
2. Select an option.
3. To enable more keyboard options, tap More keyboards, then drag the relevant sliders to the right.

To change writing language using the on-screen keyboard

- When you enter text using the on-screen keyboard, tap the writing language icon to switch between the selected writing languages. For example, tap EN until the desired writing language appears.

! This feature is only available if you have added more than one input language.

To use your writing style

1. When you enter text using the on-screen keyboard, tap .
2. Tap , then tap Keyboard settings > Use my writing style and select a source.

To change the Smart language detection settings

! Smart language detection may not be available for all writing languages.

1. When the on-screen keyboard is displayed, tap .
2. Tap , then tap Keyboard settings .
3. To activate or deactivate the Smart language detection function, drag the slider beside Smart language detection to the on or off position.

To select a keyboard layout variant

! Layout variants for the on-screen keyboard may not be available for all writing languages. You can select different keyboard layouts for each writing language.

1. When you enter text using the on-screen keyboard, tap .
2. Tap , then tap Keyboard settings .
3. Tap Writing languages, then tap beside a writing language.
5. Tap OK to confirm.
Calling

Making calls

You can make a call by manually dialling a phone number, by tapping a number saved in your contacts list, or by tapping the phone number in your call log view. You can also use the smart dial feature to quickly find numbers from your contacts list and call logs. To make a video call, you can use the Hangouts™ instant messaging and video chat application on your device. See Instant messaging and video chat on page 80.

To dial a phone number
1 From your Home screen, tap  
2 Find and tap Phone. The call log is displayed.
3 Tap  to display the dialpad.
4 Enter the phone number and tap  

To delete a number entered by mistake, tap 

To make a call using smart dial
1 From your Home screen, tap  
2 Find and tap Phone. The call log is displayed.
3 Tap  to display the dialpad.
4 Use the dialpad to enter letters or numbers that correspond to the contact you want to call. As you enter each letter or number, a list of possible matches appears.
5 Tap the contact that you want to call.

To make an international call
1 From your Home screen, tap  
2 Find and tap Phone. The call log is displayed.
3 Tap  to display the dialpad.
4 Touch and hold 0 until a “+” sign appears.
5 Enter the country code, area code (without the initial zeros) and phone number, then tap  

1 View more options
2 Delete number
3 Dialpad
4 Call button
To add a direct dial number to your Home screen
1 Touch and hold an empty area on your Home screen until the device vibrates and the customisation menu appears.
2 In the customisation menu, tap Widgets & Apps > Shortcuts.
3 Scroll through the list of applications and select Direct dial.
4 Select the contact and the number that you want to use as the direct dial number.

Showing or hiding your phone number
You can select to show or hide your phone number on call recipients' devices when you call them.

To show or hide your phone number
1 From the Home screen, tap .
2 Find and tap Settings > Call > Additional settings > Caller ID.

Receiving calls
If you receive an incoming call when the device is in sleep mode or the screen is locked, the phone application opens in full screen format. If you receive an incoming call when the screen is active, the incoming call is displayed as a floating notification, that is, in a minimised window that floats at the top of whatever screen is open. When such a notification arrives, you can choose to answer the call and open the phone application screen, or you can reject the call and stay on the current screen.

To answer an incoming call when the screen is inactive
• Drag to the right.

To answer an incoming call when the screen is active
• In the heads-up notification that appears at the top of the screen, tap ANSWER.

amous Instead of answering the call, you can go to the main phone application screen by tapping the upper part of the heads-up notification window. Using this method, you get more options to manage the call. For example, you can decide to reject the call with a message or forward the call to the answering machine.

To reject an incoming call when the screen is inactive
• Drag to the left.

To reject an incoming call when the screen is active
• In the floating notification that appears at the top of the screen, tap Decline.

amous Instead of rejecting the call, you can go to the main phone application screen by tapping the upper part of the floating notification window. Using this method, you get more options to manage the call. For example, you can decide to reject the call with a message or forward the call to the answering machine.

To mute the ringtone for an incoming call
• When you receive the call, press the volume key.

Using the answering machine
You can use the answering machine application in your device to answer calls when you are busy or miss a call. You can enable the automatic answering function and determine how many seconds to wait before the calls get answered automatically. You can also manually route calls to the answering machine when you are too busy...
To answer them. And you can access messages left on your answering machine directly from your device.

! Before using the answering machine, you must record a greeting message.

To record a greeting message for the answering machine
1 From your Home screen, tap .
2 Find and tap Settings > Call > Xperia™ Answering Machine > Greetings.
3 Tap Record new greeting and follow the on-screen instructions.

To enable automatic answering
1 From your Home screen, tap .
2 Find and tap Settings > Call > Xperia™ Answering Machine.
3 Drag the slider beside Answering Machine to the right.

▼ If you don't set a time delay for the automatic answering of calls, the default value is used.

To set a time delay for automatic answering
1 From your Home screen, tap .
2 Find and tap Settings > Call > Xperia™ Answering Machine.
3 Tap Pick up after.
4 Adjust the time by scrolling up and down.
5 Tap Done.

To forward an incoming call to the answering machine
• When a call comes in, drag Response options upwards, then select Reject with Answering Machine.

▼ When a call comes in, you can also just wait until the preset time delay elapses so that the answering machine picks up the call automatically.

To listen to messages on the answering machine
1 From your Home screen, tap .
2 Find and tap Settings > Call > Xperia™ Answering Machine > Messages.
3 Select the voice message that you want to listen to.

▼ You can also listen to answering machine messages directly from the call log by tapping .

Rejecting a call with a text message
You can reject a call with a text message. When you reject a call with such a message, the message is automatically sent to the caller and stored in the Messaging conversation with the contact.

You can select from a number of predefined messages available on your device, or you can create a new message. You can also create your own personalised messages by editing the predefined ones.

To reject a call with a text message
1 When an incoming call arrives, drag Response options upwards, then tap Reject with message.
2 Select a predefined message or tap and write a new message.

To reject a second call with a text message
1 When you hear repeated beeps during a call, drag Reject with message upwards.
2 Select a predefined message or tap and write a new message.
To edit the text message used to reject a call
1 From your Home screen, tap .
2 Find and tap Settings > Call > Reject call with message.
3 Tap the message that you want to edit, then make the necessary changes.
4 Tap OK.

Smart call handling
You can handle incoming calls without touching the screen by turning on the Smart call handling function. Once activated, you can handle calls in the following way:
• Answer: bring the device to your ear.
• Reject: shake the device.
• Ringer off: place the device face down.

To turn on Smart call handling
1 From your Home screen, tap .
2 Find and tap Settings > Personalisation > Motion.
3 Tap Smart call handling.
4 Under Smart call handling, drag the slider to the right.

Ongoing calls

1 Enter numbers during a call
2 Turn on the loudspeaker during a call
3 Put the current call on hold or retrieve a call on hold
4 Make a second call
5 Mute the microphone during a call
6 End a call

To change the ear speaker volume during a call
• Press the volume key up or down.

To activate the screen during a call
• Briefly press .

Using the call log
In the call log, you can view missed calls , received calls and dialled calls .

This is an Internet version of this publication. © Print only for private use.
To view your missed calls
1 When you have missed a call, ✨ appears in the status bar. Drag the status bar downwards.
2 Tap Missed call.

To call a number from your call log
1 From your Home screen, tap ☐.
2 Find and tap Phone. The call log is displayed.
3 To call a number directly from the call log, tap the number. To edit a number before calling, touch and hold the number, then tap Edit number before call.

To add a number from the call log to your contacts
1 From your Home screen, tap ☐.
2 Find and tap Phone. The call log appears.
3 Touch and hold a number displayed in the call log, then tap Add to Contacts.
4 Select an existing contact to which you want to add the number, or tap Create new contact.
5 Edit the contact details, then tap SAVE.

To view call log options
1 From your Home screen, tap ☐.
2 Find and tap Phone. The call log is displayed.
3 Tap ;.

You can also access general call settings using the instructions above.

Forwarding calls
You can direct calls to a different recipient, for example, to another phone number, another device, or an answering service.

To forward calls
1 From your Home screen, tap ☐.
2 Find and tap Settings > Call.
3 Tap Call forwarding and select an option.
4 Enter the number to which you want to forward calls, then tap Turn on.

To turn off call forwarding
1 From your Home screen, tap ☐.
2 Find and tap Settings > Call > Call forwarding.
3 Select an option, then tap Turn off.

Restricting calls
You can block all or certain categories of incoming and outgoing calls. If you have received a PIN2 code from your service provider, you can also use a list of Fixed Dialling Numbers (FDNs) to restrict outgoing calls. If your subscription includes a voicemail service, you can send all incoming calls from a specific contact directly to voicemail. If you want to block a certain number, you can go to Google Play™ and download applications that support this function.

FDN is not supported by all network operators. Contact your network operator to verify if your SIM card or network service supports this feature.
To block incoming or outgoing calls
1 From your Home screen, tap  
2 Find and tap Settings > Call. 
3 Tap Call Barring, then select an option. 
4 Enter the password and tap Turn on.

When you set up call blocking for the first time, you need to enter a password to activate the call blocking function. You must use this same password later if you want to edit call blocking settings.

To enable or disable fixed dialling
1 From your Home screen, tap  
2 Find and tap Settings > Call > Fixed dialling numbers. 
3 Tap Activate fixed dialling or Deactivate fixed dialling. 
4 Enter your PIN2 and tap OK.

To access the list of accepted call recipients
1 From your Home screen, tap  
2 Find and tap Settings > Call > Fixed dialling numbers > Fixed dialling numbers.

To change the SIM card PIN2
1 From the Home screen, tap  
2 Find and tap Settings > Call. 
3 Tap Fixed dialling numbers > Change PIN2. 
4 Enter the old SIM card PIN2 and tap OK. 
5 Enter the new SIM card PIN2 and tap OK. 
6 Confirm the new PIN2 and tap OK.

To send incoming calls from a specific contact directly to voicemail
1 From your Home screen, tap  
2 Find and tap Settings > Call. 
3 Select the contact for which you want to direct all incoming calls automatically to voicemail. 
4 Tap . 
5 Mark the checkbox beside All calls to voicemail. 
6 Tap SAVE.

Multiple calls
If you have activated call waiting, you can handle multiple calls at the same time. When it is activated, you will be notified by a beep if you receive another call.

To activate or deactivate call waiting
1 From your Home screen, tap  
2 Find and tap Settings > Call > Additional settings. 
3 To activate or deactivate call waiting, tap Call waiting.

To answer a second call and put the ongoing call on hold
• When you hear repeated beeps during a call, drag to the right.

To reject a second call
• When you hear repeated beeps during a call, drag to the left.

To make a second call
1 During an ongoing call, tap . The call log is displayed. 
2 Tap to display the dialpad. 
3 Enter the number of the recipient and tap . The first call is put on hold.

To answer a third call and end the ongoing call
• When the third call comes in, tap End current call and answer.
To reject a third call

• When the third call comes in, tap Decline incoming call.

To switch between multiple calls

• To switch to another call and put the current call on hold, tap Switch to this call.

Conference calls

With a conference or multiparty call, you can have a joint conversation with two or more persons.

! For details about the number of participants that you can add to a conference call, contact your network operator.

To make a conference call

1 During an ongoing call, tap ☎. The call log appears.
2 To display the dialpad, tap ☑️.
3 Dial the number of the second participant and tap ☑️. The first participant is put on hold temporarily.
4 To add the second participant to the call and start the conference, tap 📞.
5 To add more participants to the call, repeat the relevant steps as described above.

To have a private conversation with a conference call participant

1 During an ongoing conference call, tap Manage conference.
2 Tap the telephone number of the participant with whom you want to have a private conversation.
3 To end the private conversation and return to the conference call, tap 📞.

To release a participant from a conference call

1 During an ongoing conference call, tap Manage conference.
2 Tap ☑️ next to the participant you want to release.

To end a conference call

• During the call, tap 📞.

Voicemail

If your subscription includes a voicemail service, callers can leave voice messages for you when you can't answer calls. Your voicemail service number is normally saved on your SIM card. If not, you can get the number from your service provider and enter it manually.

To enter your voicemail number

1 From the Home screen, tap ☑️.
2 Find and tap Settings > Call > Voicemail > Voicemail settings > Voicemail number.
3 Enter your voicemail number.
4 Tap OK.

To call your voicemail service

1 From your Home screen, tap ☑️.
2 Find and tap Phone. The call log is displayed.
3 Tap ☑️ to display the dialpad.
4 Touch and hold 1.
Emergency calls

Your device supports international emergency numbers, for example, 112 or 911. You can normally use these numbers to make emergency calls in any country, with or without a SIM card inserted if you are within range of a network.

To make an emergency call
1. Open the dialpad.
2. Enter the emergency number, then tap 📞.

⚠️ You can make emergency calls even when no SIM card is inserted or when all outgoing calls are blocked.

To make an emergency call while the SIM card is locked
1. From the lock screen, tap Emergency call.
2. Enter the emergency number and tap 📞.

To make an emergency call while the device is locked
1. To activate the screen, briefly press the power key.
2. Touch and hold the phone icon 📞, then drag it to the right. The call log is displayed.
3. Tap 📞 to display the dialpad.
4. Enter the emergency number and tap 📞.
Contacts

Transferring contacts

There are several ways to transfer contacts to your new device. You can sync contacts from an online account or import contacts directly from another device.

Transferring contacts using a computer

Xperia™ Transfer is an application that helps you to collect contacts from your old device and transfer them to your new device. Xperia™ Transfer, which you can access from within the Xperia™ Companion computer program, supports mobile devices that run on iOS/iCloud and Android™. If you are switching from an iOS device, the App Matching feature suggests the Android equivalents of your iOS apps.

To use Xperia™ Transfer, you need:

• An Internet-connected computer.
• Your new Android™ device.
• A USB cable for your new Android™ device.
• Your old device.
• A USB cable for your old device.

You may not need your old device. For iOS devices, you can connect directly to iCloud or use a local backup. For previously owned Sony devices you can use local backups.

To transfer contacts to your new device

1 Search and download Xperia™ Companion (on a PC or Mac® computer) from http://support.sonymobile.com/global-en/tools/xperia-companion if the software is not already installed.
2 After successful installation, open the Xperia™ Companion software, then click Xperia™ Transfer and follow the relevant instructions to transfer your contacts.

Transferring contacts using an online account

If you sync the contacts in your old device or your computer with an online account, for example, Google Sync™, Facebook™ or Microsoft® Exchange ActiveSync®, you can transfer your contacts to your new device using that account.

To synchronise contacts to your new device using a synchronisation account

1 From your Home screen, tap , then tap .
2 Tap , then tap Settings > Accounts & sync.
3 Select the account that you want to sync your contacts with, then tap > Sync now.

! You need to be signed in to the relevant sync account before you can sync your contacts with it.

Other methods for transferring contacts

There are several other ways to transfer contacts from your old device to your new device. For example, you can copy contacts to a memory card, use Bluetooth® technology, or save contacts to a SIM card. For more specific information about transferring the contacts from your old device, refer to the relevant User guide.

To import contacts from a memory card

1 From your Home screen, tap , then tap .
2 Press , then tap Import contacts > SD card.
3 Select where to store your contacts.
4 Select the files that you want to import and tap OK.
To import contacts using Bluetooth® technology

1 Make sure you have the Bluetooth® function turned on and that your device is set to visible.
2 When you are notified of an incoming file to your device, drag the status bar downwards and tap the notification to accept the file transfer.
3 Tap Accept to start the file transfer.
4 Drag the status bar downwards. When the transfer is complete, tap the notification.
5 Tap the received file.

To import contacts from a SIM card

⚠ You may lose information or get multiple contact entries if you transfer contacts using a SIM card.

1 From your Home screen, tap 📦, then tap 📦.
2 Tap 🕒, then tap Import contacts > SIM card.
3 To import an individual contact, find and tap the contact. To import all contacts, tap Import all.

Searching and viewing contacts

1 Search for contacts
2 View more options
3 Contacts, Favourites and Groups tabs
4 Edit and view medical and emergency contact information
5 View contact details
6 Jump to contacts starting with the selected letter
7 Add a contact

To search for a contact

1 From your Home screen, tap 📦, then tap 📦.
2 Tap 🕒 and enter a phone number, name or other information in the Search contacts field. The result list is filtered as you enter each character.

To select which contacts to display in the Contacts application

1 From your Home screen, tap 📦, then tap 📦.
2 Press ⌚, then tap Filter.
3 In the list that appears, mark or unmark the desired options. If you have synchronised your contacts with a synchronisation account, that account appears in the list. To further expand the list of options, tap the account.
Adding and editing contacts

To add a contact
1. From your Home screen, tap☎, then tap✍.
2. Tap✍.
3. If you have synchronised your contacts with one or more accounts and you are adding a contact for the first time, you must select the account to which you want to add this contact. Alternatively, tap No backup if you only want to use and save this contact on your device.
4. Enter or select the desired information for the contact.
5. When you are finished, tapSAVE.

After you select a synchronisation account in step 3, that account will show as the default account offered the next time you add a contact. When you save a contact to a particular account, that account will show as the default account to save to the next time you add a contact. If you have saved a contact to a particular account and want to change it, you need to create a new contact and select a different account to save it to.

If you add a plus sign and the country code before a contact's phone number, you do not have to edit the number again when you make calls from other countries.

To edit a contact
1. From your Home screen, tap☎, then tap✍.
2. Tap the contact that you want to edit, then tap✍.
3. Edit the desired information.
4. When you are finished, tapSAVE.

Some synchronisation services do not allow you to edit contact details.

To associate a picture with a contact
1. From your Home screen, tap☎, then tap✍.
2. Tap the contact that you want to edit, then tap✍.
3. Tap✍, then select a method for adding the contact picture and edit as desired.
4. After you add the picture, tapSAVE.

You can also add a picture to a contact directly from the Album application. If you want to add a picture that is saved to an online account, you must download the picture first.

To personalise the ringtone for a contact
1. From your Home screen, tap☎, then tap✍.
2. Tap the contact that you want to edit, then tap✍.
3. Tap[href] Set ringtone[/href].
4. Select an option from the list or tap[href] to select a music file saved to your device, then tap Done.
5. TapSAVE.

To delete contacts
1. From your Home screen, tap☎, then tap✍.
2. Touch and hold the contact that you want to delete.
3. To delete all contacts, tap the downwards arrow to open the drop down menu, then select Mark all.
4. Tap✎, then tapDelete.

To edit contact information about yourself
1. From your Home screen, tap☎, then tap✍.
2. TapMyself, then tap✍.
3. Enter the new information or make the changes you want.
4. When you are finished, tapSAVE.
To create a new contact from a text message
1. From your Home screen, tap ☰, then find and tap ☰.
2. Tap the icon next to the phone number, then tap Save.
3. Select an existing contact, or tap Create new contact.
4. Edit the contact information and tap SAVE.

Adding medical and emergency contact information

You can add and edit ICE (In Case of Emergency) information in the Contacts application. You can enter medical details, such as allergies and medications that you are using, plus information about relatives and friends who can be contacted in case of emergency. After setup, your ICE information can be accessed from the security lock screen. This means that even if the screen is locked, for example, by a PIN, pattern or password, emergency personnel can still retrieve your ICE information.

To show your medical and personal information as part of the ICE information
1. From your Home screen, tap ☰, then tap ☰.
2. Tap ICE – In Case of Emergency.
3. Tap ☰, then mark the Show personal information checkbox.

To enter your medical information
1. From your Home screen, tap ☰, then tap ☰.
2. Tap ICE – In Case of Emergency.
3. Tap ☰, then tap Edit medical info.
4. Edit the desired information.
5. When you are finished, tap SAVE.
To add a new ICE contact
1 From your Home screen, tap 📱, then tap 📬.
2 Tap ICE – In Case of Emergency, then tap 📬.
3 If you have synchronised your contacts with one or more accounts and you are adding a contact for the first time, you must select the account to which you want to add this contact. Alternatively, tap No backup if you only want to use and save this contact on your device.
4 Enter or select the desired information for the contact.
5 When you are finished, tap SAVE.

The ICE contact must have at least a phone number to which emergency personnel can make a call. If your device is locked by a security screen lock, emergency personnel can only see the phone number of the ICE contact, even if there is other information entered in the Contacts application about the contact.

To use existing contacts as ICE contacts
1 From your Home screen, tap 📱, then tap 📬.
2 Tap ICE – In Case of Emergency, then tap 📬.
3 Mark the contacts that you want to use as ICE contacts.
4 When you are finished, tap Done.

The ICE contacts that you select must have at least a phone number to which emergency personnel can make a call. If your device is locked by a security screen lock, emergency personnel can only see the phone number of the ICE contacts, even if there is other information entered in the Contacts application about the contacts.

To make your ICE information visible from the security lock screen
1 From your Home screen, tap 📱, then tap 📬.
2 Tap ICE – In Case of Emergency.
3 Tap ✅, then tap Settings.
4 Mark the ICE in lock screen checkbox.

Your ICE information is visible from the security lock screen by default.

To enable calls to ICE contacts from the security lock screen
1 From your Home screen, tap 📱, then tap 📬.
2 Tap ICE – In Case of Emergency.
3 Tap ✅, then tap Settings.
4 Mark the Enable calling in ICE checkbox.

Some network operators may not support ICE calls.

Favourites and groups
You can mark contacts as favourites so that you can get quick access to them from the Contacts application. You can also assign contacts to groups, to get quicker access to a group of contacts from within the Contacts application.

To mark or unmark a contact as a favourite
1 From the Home screen, tap 📱, then tap 📬.
2 Tap the contact you want to add to or remove from your favourites.
3 Tap ✪.

To view your favourite contacts
1 From your Home screen, tap 📱, then tap 📬.
2 Tap Favourites.
To assign a contact to a group

1 In the Contacts application, tap the contact that you want to assign to a group.
2 Tap \( \), then tap the bar directly under Groups.
3 Mark the checkboxes for the groups to which you want to add the contact.
4 Tap SAVE.

Sending contact information

To send your business card

1 From your Home screen, tap \( \), then tap \( \).
2 Tap Myself.
3 Tap \( \), then tap Share.
4 Select an available transfer method and follow the on-screen instructions.

To send a contact

1 From your Home screen, tap \( \), then tap \( \).
2 Tap the contact whose details you want to send.
3 Tap \( \), then tap Share.
4 Select an available transfer method and follow the on-screen instructions.

To send several contacts at once

1 From your Home screen, tap \( \), then tap \( \).
2 Press \( \), then tap Mark several.
3 Mark the contacts you want to send, or select all if you want to send all contacts.
4 Tap \( \), then select an available transfer method and follow the on-screen instructions.

Avoiding duplicate entries in the Contacts application

If you synchronise your contacts with a new account or import contact information in other ways, you could end up with duplicate entries in the Contacts application. If this happens, you can join such duplicates to create a single entry. And if you join entries by mistake, you can separate them again later.

To link contacts

1 From your Home screen, tap \( \), then tap \( \).
2 Tap the contact that you want to link with another contact.
3 Press \( \), then tap Link contact.
4 Tap the contact whose information you want to join with the first contact, then tap OK to confirm. The information from the first contact is merged with the second contact, and the linked contacts are displayed as one contact in the Contacts list.

To separate linked contacts

1 From your Home screen, tap \( \), then tap \( \).
2 Tap the linked contact that you want to edit, then tap \( \).
3 Tap Unlink contact \( \) to Unlink.

Backing up contacts

You can use a memory card, a SIM card or a USB storage device to back up contacts. See Transferring contacts on page 71 for more information about how to restore contacts to your device.

To export all contacts to a memory card

1 From your Home screen, tap \( \), then tap \( \).
2 Press \( \), then tap Export contacts \( \) SD card.
3 Tap OK.
To export contacts to a SIM card

When you export contacts to a SIM card, not all information may get exported. This is due to memory limitations on SIM cards.

1. From your Home screen, tap ☰, then tap ☰.
2. Press ☰, then tap Export contacts > SIM card.
3. Mark the contacts you want to export, or tap Mark all if you want to export all your contacts.
4. Tap Export.
5. Select Add contacts if you want to add the contacts to existing contacts on your SIM card, or select Replace all contacts if you want to replace the existing contacts on your SIM card.

To export all contacts to a USB storage device

When you export contacts using this method, you must first connect your device to a USB storage device, for example, a flash drive or an external hard drive, using a USB Host adapter cable. See Connecting your device to USB peripherals on page 118 for more information about how to connect your device to a USB storage device.

1. From your Home screen, tap ☰, then tap ☰.
2. Tap ☰, then tap Export contacts > USB storage.
3. Tap OK.
Messaging and chat

Reading and sending messages

The Messaging application shows your messages as conversations, which means that all messages to and from a particular person are grouped together. To send multimedia messages, you need the correct MMS settings on your device. See Internet and MMS settings on page 40.

The number of characters that you can send in a single message varies depending on the operator and the language you use. The maximum size of a multimedia message, which includes the size of added media files, is also operator dependent. Contact your network operator for more information.

To create and send a message

1. From your Home screen, tap 📩, then find and tap 📩.
2. Tap 📩.
3. Enter the recipient’s name or phone number, or other contact information that you have saved about the recipient, then select from the list that appears. If the recipient is not listed as a contact, enter the recipient’s number manually.
4. Tap Write message and enter your message text.
5. If you want to add an attachment, tap 📂 and select an option.
6. To send the message, tap ↪.

If you exit a message before sending, it gets saved as a draft. The conversation gets tagged with the word Draft.
To read a received message
1 From your Home screen, tap , then find and tap .
2 Tap the desired conversation.
3 If the message is not yet downloaded, tap and hold the message, then tap Download message.

* All received messages are saved by default to the device memory.

To reply to a message
1 From your Home screen, tap , then find and tap .
2 Tap the conversation containing the message.
3 Enter your reply and tap .

To forward a message
1 From your Home screen, tap , then find and tap .
2 Tap the conversation containing the message that you want to forward.
3 Touch and hold the message that you want to forward, then tap Forward message.
4 Enter the recipient’s name or phone number, or other contact information that you have saved about the recipient, then select from the list that appears. If the recipient is not listed as a contact, enter the recipient’s number manually.
5 Edit the message, if necessary, then tap .

To save a file contained in a message you receive
1 From your Home screen, tap , then find and tap .
2 Tap the conversation you want to open.
3 If the message has not been downloaded yet, tap and hold the message, then tap Download message.
4 Touch and hold the file you want to save, then select the desired option.

Organising your messages

To delete a message
1 From your Home screen, tap , then find and tap .
2 Tap the conversation containing the message you want to delete.
3 Touch and hold the message you want to delete, then tap Delete message > Delete.

To delete conversations
1 From your Home screen, tap , then find and tap .
2 Tap ; then tap Delete conversations.
3 Mark the checkboxes for the conversations that you want to delete, then tap ; then tap Delete.

To star a message
1 From your Home screen, tap , then find and tap .
2 Tap the conversation that you want to open.
3 Touch and hold the message that you want to star, then tap Add star.
4 To unstar a message, touch and hold the starred message, then tap Delete star.

To view starred messages
1 From your Home screen, tap , then find and tap .
2 Tap ; then tap Starred messages.
3 All starred messages appear in a list.
To search for messages
1 From your Home screen, tap , then find and tap .
2 Tap ; then tap Search.
3 Enter your search keywords. The search results appear in a list.

Calling from a message

To call a message sender
1 From your Home screen, tap , then find and tap .
2 Tap a conversation and tap , then tap .

To save a sender’s number as a contact
1 From your Home screen, tap , then find and tap .
2 Tap > Save.
3 Select an existing contact, or tap Create new contact.
4 Edit the contact information and tap Done.

Messaging settings

To change your message notification settings
1 From your Home screen, tap , then find and tap .
2 Tap ; then tap Settings.
3 To set a notification sound, tap Notification sound, then select an option or tap and select a music file that is saved to your device.
4 To confirm, tap Done.
5 For other notification settings, check or uncheck the relevant checkboxes.

To turn the delivery report function on or off for outgoing messages
1 From your Home screen, tap , then find and tap .
2 Tap ; then tap Settings.
3 Mark or unmark the Delivery report checkbox as desired.

After the delivery report function is turned on, a check mark is displayed in messages that have been successfully delivered.

Instant messaging and video chat

You can use the Google Hangouts™ instant messaging and video chat application on your device to chat with friends who also use the application on computers, Android™ devices and other devices. You can turn any conversation into a video call with several friends, and you can send messages to friends even when they are offline. You can also view and share photos easily.

Before you start using Hangouts™, make sure that you have a working Internet connection and a Google™ account. Go to http://support.google.com/hangouts and click the “Hangouts on your Android” link to get more detailed information about how to use this application.

The video call function only works on devices with a front camera.

To use the Hangouts™ application
1 From your Home screen, tap .
2 Find and tap Hangouts.
Email

Setting up email

Use the email application in your device to send and receive email messages through your email accounts. You can have one or several email accounts at the same time, including corporate Microsoft Exchange ActiveSync accounts.

To set up an email account
1. From your Home screen, tap 📧.
2. Find and tap Email.
3. Follow the instructions that appear on the screen to complete the setup.

Tip: For some email services, you may need to contact your email service provider for information on detailed settings for the email account.

To add an extra email account
1. From your Home screen, tap 📧.
2. Find and tap Email.
3. Tap ⓘ, then tap Settings > Add account.
4. Enter the email address and password, then tap Next. If the settings for the email account cannot be downloaded automatically, complete the setup manually.
5. When you are finished, tap Next.

Sending and receiving email messages

To download new email messages

* When the email inbox is open, swipe downwards on the message list.

! Before trying to download new email messages, make sure that you have a working data connection. For more information about ensuring successful data connections, see Internet and MMS settings on page 40.
To read your email messages
1. From your Home screen, tap 📧.
2. Find and tap Email.
3. If you are using several email accounts, drag the left edge of the screen to the right and select the account that you want to check. If you want to check all your email accounts at once, drag the left edge of the screen to the right, then tap Combined inbox.
4. In the email inbox, scroll up or down and tap the email message that you want to read.

To create and send an email message
1. From your Home screen, tap 📧, then find and tap Email.
2. If you are using several email accounts, drag the left edge of the screen to the right and select the account from which you want to send the email.
3. Tap 📩, then type the recipient’s name or email address and select one or more recipients from the drop down list.
4. Enter the email subject and message text, then tap 📧.

To reply to an email message
1. In your email inbox, find and tap the message that you want to reply to, then tap Reply or Reply all.
2. Enter your reply, then tap 📧.

To forward an email message
1. In your email inbox, find and tap the message that you want to forward, then tap Forward.
2. Enter the recipient's name or email address, then select one or more recipients from the drop down list.
3. Enter your message text, then tap 📧.

To view an email message attachment
1. Find and tap the email message containing the attachment that you want to view. Email messages with attachments are indicated by 📧.
2. After the email message opens, tap Load. The attachment starts to download.
3. After the attachment finishes downloading, tap View.

To save a sender’s email address to your contacts
1. Find and tap a message in your email inbox.
2. Tap the name of the sender, then tap OK.
3. Select an existing contact, or tap Create new contact.
4. Edit the contact information, if desired, then tap Done.

Organising your email messages

To sort your emails
1. From your Home screen, tap 📧.
2. Find and tap Email.
3. If you are using several email accounts, drag the left edge of the screen to the right and select the account with the email that you want to sort. If you want to sort email in all your email accounts at once, drag the left edge of the screen to the right, then tap Combined inbox.
4. Tap ↓, then tap Sort.
5. Select a sorting option.
To search for emails
1 From your Home screen, tap , then find and tap Email.
2 If you are using several email accounts, drag the left edge of the screen to the right and select the account that you want to search. If you want to search all your email accounts at once, drag the left edge of the screen to the right, then tap Combined inbox.
3 Tap .
4 Enter your search text, then tap on the keyboard.
5 The search result appears in a list sorted by date. Tap the email message that you want to open.

To view all folders for one email account
1 From your Home screen, tap , then find and tap Email.
2 Drag the left edge of the screen to the right, then select the account that you want to check.
3 Under the account that you want to check, select Show all folders.

To delete an email message
• In your email inbox, flick the message that you want to delete to the right.

To move an email message to another folder
1 In your email inbox, flick the message that you want to move to the left.
2 Tap Move, then select a folder.

Email account settings
To remove an email account from your device
1 From your Home screen, tap .
2 Find and tap Email.
3 Press ;, then tap Settings.
4 Select the account you want to remove.
5 Tap Delete account > OK.

To change the inbox check frequency
1 From your Home screen, tap .
2 Find and tap Email.
3 Tap ;, then tap Settings.
4 Select the account for which you want to change the inbox check frequency.
5 Tap Check frequency > Check frequency and select an option.

To set an Out of Office auto-reply in an Exchange Active Sync account
1 From your Home screen, tap , then find and tap Email.
2 Press ;, then tap Settings.
3 Select the EAS (Exchange Active Sync) account for which you want to set an Out of Office auto-reply.
4 Tap Out of office.
5 Drag the slider beside Out of office to the right to turn on the function.
6 If needed, mark the Set time range checkbox and set the time range for the auto reply.
7 Enter your Out of Office message in the body text field.
8 Tap OK to confirm.

Gmail™
If you have a Google™ account, you can use the Gmail™ application to read and write email messages.
1  View a list of all Gmail accounts and folders
2  Search for email messages
3  List of email messages
4  Write an email message

To learn more about Gmail™
• When the Gmail application is open, drag the left edge of the screen to the right, then find and tap Help.
Music

Transferring music to your device

There are different ways to transfer music from a computer to your device:

• For Windows® only: Connect the device and computer using a USB cable and then drag and drop the music files directly into the file manager application on the computer. See Managing files using a computer on page 138.

• If the computer is a PC, you can use the Media Go™ application from Sony and organise your music files, create playlists, subscribe to podcasts, and more. To learn more and download the Media Go™ application, go to http://mediago.sony.com/enu/features.

• You can use the Xperia™ Companion software to transfer your media files between the computer and your device. To learn more and download Xperia™ Companion, go to www.sonymobile.com/global-en/tools/xperia-companion.

! The Music may not support all music file formats. For more information about supported file formats and the use of multimedia (audio, image and video) files, download the White Paper for your device at www.sonymobile.com/support.

Listening to music

Use the Music application to listen to your favourite music and audio books.

1 Go to the Music home screen
2 Search all songs saved to your device
3 View the current play queue
4 Album art (if available)
5 Progress indicator – Drag the indicator or tap along the line to fast forward or rewind
6 Elapsed time of current song
7 Total time length of current song
8 Repeat all songs in the current play queue
9 Tap to go to the next song in the play queue
   Touch and hold to fast forward within the current song
10 Play or pause a song
11 Tap to go to the previous song in the play queue
   Touch and hold to rewind within the current song
12 Shuffle songs in the current play queue
Music home screen menu

The Music home screen menu gives you an overview of all the songs on your device. From here you can manage your albums and playlists.

To play a song using the Music application
1. From your Home screen, tap \( \text{Menu button} \) and find and tap \( \text{Music} \).
2. Drag the left edge of the screen to the right.
3. Select a music category.
4. Tap a song to play it.

You might not be able to play copyright-protected items. Verify that you have necessary rights in material that you intend to share.

Online resources related to the song can include videos on YouTube™, song lyrics, and artist information on Wikipedia.

To find song-related information online
• While a song is playing in the Music application, tap the Album art and then tap More about this.

To adjust the audio volume
• Press the volume key.

To minimise the Music application
• When a song is playing, tap \( \text{Home button} \) to go to the Home screen. The Music application stays playing in the background.

To open the Music application when it is playing in the background
1. While a song is playing in the background, tap the \( \text{Recent apps button} \) to open the recently used applications window.
2. Tap the Music application.

To return to the music player screen
1. Drag the left edge of the screen to the right to open the Music home screen menu.
2. Scroll up or down to view content.
3. Play a song using the Music application.
4. Play all songs in shuffle mode.

This is an Internet version of this publication. © Print only for private use.
1. Return to the Music home screen
2. View the current play queue
3. Browse all artists
4. Browse all albums
5. Browse all songs
6. Browse your music library and filter by artist, album or song name
7. Browse all playlists
8. Play a shared music file on another device
9. View all subscribed or downloaded files in Podcast
10. Open the settings menu for the Music application
11. Open the support menu for the Music application

To open the Music home screen menu
1. From your Home screen, tap 🎵, then find and tap 🎵.
2. Drag the left edge of the screen to the right.

To return to the Music home screen
• When the Music home screen menu is open, tap Home.
• When the Music home screen menu is open, tap on the screen to the right of the menu.

To delete a song
1. From the Music home screen menu, browse to the song that you want to delete.
2. Touch and hold the song title, then tap Delete in the list that appears.
3. Tap Delete again to confirm.

Playlists
On the Music home screen, you can create your own playlists from the music that is saved on your device.

To create your own playlists
1. From the Music home screen, touch and hold the name of the album or song that you want to add to a playlist.
2. In the menu that opens, tap Add to playlist > Create new playlist.
3. Enter a name for the playlist and tap OK.

* You can also tap the album art and then tap Add to playlist to create a new playlist.
To play your own playlists
1 Open the Music home screen menu, then tap Playlists.
2 Under Playlists, select the playlist that you want to open.
3 If you want to play all songs, tap Shuffle all.

To add songs to a playlist
1 From the Music home screen, browse to the song or album that you want to add to a playlist.
2 Touch and hold the song or the album title, then tap Add to playlist.
3 Tap the name of the playlist to which you want to add the album or song. The album or song is now added to the playlist.

To remove a song from a playlist
1 In a playlist, touch and hold the title of the song that you want to delete.
2 Tap Delete from playlist.

To delete a playlist
1 Open the Music home screen menu, then tap Playlists.
2 Touch and hold the playlist that you want to delete.
3 Tap Delete.
4 Tap Delete again to confirm.

Sharing music
To share a song
1 From the Music home screen, browse to the song or album that you want to share.
2 Touch and hold the song title, then tap Share.
3 Select an application from the list, then follow the on-screen instructions.

Enhancing the sound
To improve the sound quality using the Equaliser
1 Open the Music home screen menu, then tap Settings > Sound enhancements > Sound effects > Equaliser.
2 To adjust the sound manually, drag the frequency band buttons up or down.
   To adjust the sound automatically, tap and select a style.

To turn on the Surround sound feature
1 Open the Music home screen menu, then tap Settings > Sound enhancements > Sound effects > Surround sound (VPT).
2 Flick left or right to select a setting, then tap OK to confirm.

Recognising music with TrackID™
Use the TrackID™ music recognition service to identify a song you hear playing in your surroundings. Just record a short sample of the song and you’ll get artist, title and album info within seconds. You can purchase songs identified by TrackID™ and you can view TrackID™ charts to see what TrackID™ users around the globe are searching for. For best results, use TrackID™ in a quiet area.
1 Create an online TrackID™ profile
2 View current music charts
3 View TrackID™ options
4 View the history of your previous searches
5 Identify the music that you are listening to

The TrackID™ application and the TrackID™ service are not supported in all countries/regions or by all networks and/or service providers in all areas. TrackID™ can be connected to music streaming services if the streaming service is available in your country.

To identify music using TrackID™ technology
1 From your Home screen, tap 🎵.
2 Find and tap TrackID™, then hold your device close to the music source.
3 Tap 🎵. If the song is recognised by the TrackID™ service, the results appear on the screen.

To return to the TrackID™ start screen, tap ⌘.

To view artist information for a song
1 After a song is recognised by the TrackID™ application, the result is displayed on the TrackID™ home screen.
2 Scroll to the result that you want to view, then tap to open it.

To delete a song from the track history
1 Open the TrackID™ application, then browse to the song that you want to delete.
2 Touch and hold the screen to make 📀 appear.
3 Tap 📀.
FM radio

Listening to the radio
The FM radio in your device works like any FM radio. For example, you can browse and listen to FM radio stations and save them as favourites. You must connect a wired headset or headphones to your device before you can use the radio. This is because the headset or headphones act as an antenna. After one of these devices is connected, you can then switch the audio to the speaker, if desired.

![FM radio interface]

1. Favourites list
2. Radio on/off button
3. View menu options
4. Tuned frequency
5. Save or remove a channel as a favourite
6. Tuning dial
7. Frequency band – drag left or right to move between channels
8. Move up the frequency band to search for a channel
9. A saved favourite channel
10. Move down the frequency band to search for a channel

To listen to the FM radio
1. Connect a headset or a set of headphones to your device.
2. From your Home screen, tap ⬇️. 
3. Find and tap FM radio ⬇️. The available channels appear as you scroll through the frequency band.

⚠️ When you start the FM radio, available channels appear automatically. If a channel has RDS information, it appears a few seconds after you start listening to the channel.

To move between radio channels
• Drag the frequency band left or right.

To start a new search for radio channels
1. When the radio is open, press ⬇️.
2. Tap Search for channels. The radio scans the whole frequency band, and all available channels are displayed.
To switch the radio sound to the speaker

1. When the radio is open, press ‡.
2. Tap Play in speaker.

To switch the sound back to the wired headset or headphones, press ‡ and tap Play in headphones.

To identify a song on the FM radio using TrackID™

1. While the song is playing on your device’s FM radio, tap ‡, then select TrackID™.
2. A progress indicator appears while the TrackID™ application samples the song. If identification is successful, you are presented with a result or a list of possible results.
3. To return to the FM Radio, tap ⬅️.

⚠️ The TrackID™ application and the TrackID™ service are not supported in all countries/regions, or by all networks and/or service providers in all areas.

Favourite radio channels

To save a channel as a favourite

1. When the radio is open, navigate to the channel that you want to save as a favourite.
2. Tap ✩.
3. Enter a name and select a colour for the channel, then press Save.

To remove a channel as a favourite

1. When the radio is open, navigate to the channel that you want to remove.
2. Tap ✩, then tap Delete.

Sound settings

To switch between mono and stereo sound mode

1. When the radio is open, press ‡.
2. Tap Enable stereo sound.
3. To listen to the radio in mono sound mode again, press ‡ and tap Force mono sound.

To select the radio region

1. When the radio is open, press ‡.
2. Tap Set radio region.
3. Select an option.

**To take a photo from the lock screen**

1. To activate the screen, briefly press the power key.
2. To activate the camera, touch and hold the camera icon then drag it to the left.
3. After the camera opens, tap .

**To take a photo using the camera key**

1. Activate the camera.
2. Press the camera key fully down.

**To take a photo by tapping the on-screen camera button**

1. Activate the camera.
2. Point the camera towards the subject.
3. Tap the on-screen camera button . The photo is taken as soon as you release your finger.

**To take a selfie using the front camera**

1. Activate the camera.
2. Tap .
3. To take the photo, press the camera key. The photo is taken as soon as you release your finger.

**To use the still camera flash**

1. When the camera is open, tap .
2. Select your desired flash setting.
3. Take the photo.

**To use the zoom function**

- When the camera is open, press the volume key up or down.
• When the camera is open, pinch in or pinch out on the camera screen.

To record a video using the camera key
1 Activate the camera.
2 Swipe the screen to Video mode.
3 To start recording a video, press the camera key.
4 To stop recording, press the camera key again.

To record a video
1 Activate the camera.
2 Point the camera towards the subject.
3 To start recording, tap .
4 To pause when recording a video, tap . To resume recording, tap .
5 To stop recording, tap .

To take a photo when recording a video
• To take a photo when recording a video, tap . The photo is taken as soon as you release your finger.

To view your photos and videos
1 Activate the camera, then tap a thumbnail to open a photo or video.
2 Flick left or right to view your photos and videos.

To delete a photo or recorded video
1 Browse to the photo or video that you want to delete.
2 Tap the screen to make appear.
3 Tap .
4 Tap Delete to confirm.

Face detection
You can use face detection to bring an off-centre face into focus. The camera automatically detects up to five faces, indicated by white frames. A coloured frame shows which face has been selected for focus. Focus is set to the face closest to the camera. You can also tap one of the frames to select which face should be in focus.

To turn on face detection
1 Swipe the screen to select Manual capturing mode.
2 Tap .
3 Find and tap Focus mode > Face detection.

To take a photo using face detection
1 When the camera is open and Face detection turned on, point the camera at your subject. Up to five faces can be detected, and each detected face is framed.
2 Press the camera key halfway down. A coloured frame shows which face is in focus.
3 To take the photo, press the camera key fully down.

Using Smile Shutter™ to capture smiling faces
Use Smile Shutter™ technology to photograph a face just as it smiles. The camera detects up to five faces and selects one face for smile detection and auto focus. When the selected face smiles, the camera automatically takes a photo.

To turn on Smile Shutter™
1 Activate the camera.
2 Tap .
3 Find and tap Smile Shutter and select a smile level.
To take a photo using Smile Shutter™

1. When the camera is open and Smile Shutter™ is turned on, point the camera at your subject. The camera selects which face to focus on.
2. The face selected appears inside a coloured frame and the photo is taken automatically.
3. If no smile is detected, press the camera key to take the photo manually.

Adding the geographical position to your photos

Turn on geotagging to add the approximate geographical location (a geotag) to photos when you take them. The geographical location is determined either by wireless networks or GPS technology.

When 📍 appears on the camera screen, geotagging is turned on but the geographical position has not been found. When 📍 appears, geotagging is turned on and the geographical location is available, so your photo can get geotagged. When neither of these two symbols appears, geotagging is turned off.

To turn on geotagging

1. From your Home screen, tap 🏠.
2. Tap Settings > Location.
3. Tap the on-off switch.
4. Activate the camera.
5. Tap 🏠.
6. Find Geotagging. Drag the slider to the right.

General camera settings

Capturing modes

- Superior auto
  Optimize your settings to suit any scene.
- Manual
  Adjust camera settings manually.
- Style portrait
  Take photos with real-time portrait styles.
- AR mask
  Mask your face with features from the face of someone else to take fun selfies.
- Face in picture
  Take photos using the front and rear cameras at the same time.
- Sound Photo
  Take photos with background sound.
- Multi camera
  Record the same scene from multiple angles on a single screen.
- 4K video
  Take videos with 4K ultra high definition.
- Timeshift video
  Take high frame rate videos and apply slow motion effects.
- AR effect
  Take photos or videos with virtual scenes and characters.
- Creative effect
  Apply effects to photos or videos.
- Sweep Panorama
  Take wide-angle and panoramic photos.
To switch between capturing modes
1 Press and hold down the camera key.
2 Swipe the screen to the desired capturing mode.

Superior auto
Superior auto mode detects the conditions in which you are shooting and automatically adjusts the settings to ensure that you take the best photo possible.

*The highest resolution that Superior auto mode supports is 8MP. If you want to take photos with a higher resolution, use Manual mode.*

Manual mode
Use Manual mode when you want to manually adjust your camera settings for taking photos and videos.

AR effect
You can apply AR (augmented reality) effects to your photos or videos and make them more fun. When using the camera, this setting lets you integrate 3D scenes into your photos or videos. Just select the scene you want and adjust its position in the viewfinder.

Creative effect
You can apply different effects on your photos or videos. For example, you can add a Nostalgic effect to make photos look older or a Sketch effect for a more fun image.

Sweep Panorama
You can take wide-angle and panoramic photos from the horizontal or vertical direction in an easy press-and-sweep motion.

To take a panoramic photo
1 Activate the camera.
2 Swipe the screen to go to 📷, then select 📷.
3 To select a shooting direction, tap 📷.
4 Press the camera key and move the camera slowly and steadily in the direction of movement indicated on the screen.

Timeshift video
You can record video at the high frame rate of 120 frames per second and then apply effects so that you can play back parts or all of the video in slow motion.

Face in picture
You can use the Face in picture mode to turn on the front and main cameras at the same time, so you can take a photo of yourself together with the subject.

Multi camera mode
Multi camera mode lets you take a photo that combines images from two different angles and devices. You see two images in the camera viewfinder of your device – one from your own camera and one from a connected Xperia™ device or a Sony camera that supports NFC and Wi-Fi Direct™ technology. You can then edit what you see in the viewfinder before taking a photo.

So if you’re at a concert venue, for example, and you want to capture a photo that combines a view of the band from one angle and the audience from another, you can use Multi camera mode for the best effect.

You can set up Multi camera mode using NFC, which launches the pairing of the two devices using Wi-Fi Direct™ technology.
To use Multi camera mode
1. Turn on the NFC functions on both devices that you want to connect.
2. Activate the camera on your device.
3. Swipe the screen to go to \( \mathbb{D} \), then select \( \mathbb{F} \).
4. On the screens of both devices, tap \( \mathbb{F} \).
5. Touch the NFC detection areas of each device to one other. Both devices should now connect using Wi-Fi Direct™ technology.
6. Once the devices are connected, two images appear in the viewfinder of your device—one from the viewfinder of your camera and another from the viewfinder of the connected device.
7. To edit the images in your viewfinder, tap \( \mathbb{D} \).
8. Edit the images as desired. For example, you can tap and hold an image and drag it to the other side of the viewfinder to change the order.
9. When you are finished editing and are ready to capture the final combined image, tap Done > .

Style Portrait
You can use the Style Portrait feature to apply touch-up effects to portrait photos as you take them, to ensure the best results. You can also use the Magic beam setting to add a spotlight pattern for the eyes.

To use the Style portrait feature
1. Activate the camera.
2. Swipe the screen to go to \( \mathbb{D} \), then select \( \mathbb{F} \).
3. To display all styles, tap the style name that is currently selected, for example, Bubble.
4. To add more styles, tap More.
5. Select the style that you want to apply, then tap \( \mathbb{F} \) to take a photo.

To use the Magic beam feature
1. Activate the camera.
2. Swipe screen to go to \( \mathbb{D} \), then tap \( \mathbb{F} \).
3. To apply an inside eye spotlight effect, select a customised pattern.

AR mask
Use the AR mask feature to mask a selfie of your face with facial features from another human or from an animal. For example, you can fuse your face with the face of a friend to make amusing hybrid selfies.

To use the AR mask feature
1. Activate the camera.
2. Swipe the screen to go to \( \mathbb{D} \), then select \( \mathbb{F} \).
3. Point the camera towards a face, then select the mask that you want to apply.
4. To take a photo, first tap \( \mathbb{F} \) to hide all masks, then tap \( \mathbb{F} \).
5. To display all mask types again, locate a face in the coloured frame that appears in your camera viewfinder, then tap \( \mathbb{F} \).

Downloading camera applications
You can download free or paid camera applications from Google Play™ or other sources. Before you start downloading, make sure that you have a working Internet connection, preferably over Wi-Fi® to limit data traffic charges.

To download camera applications
1. Open the camera application.
2. Swipe the screen to go to \( \mathbb{D} \), then tap \( \mathbb{F} \).
3. Select the application that you want to download, and follow the instructions to complete the installation.
Quick launch
Use Quick launch settings to launch the camera when the screen is locked.

Launch only
When this setting is activated, you can launch the camera when the screen is locked by pressing and holding down the camera key.

Launch and capture
When this setting is activated, you can launch the camera and capture a photo automatically when the screen is locked by pressing and holding down the camera key.

Launch and record video
When this setting is activated, you can launch the camera and start capturing video when the screen is locked by pressing and holding down the camera key.

Off

Geotagging
Tag photos with details of where you took them.

Touch capture
Identify a focus area, and then touch the camera screen with your finger. The photo is taken as soon as you release your finger.

Grid lines
Choose to turn on or turn off the grid lines in your camera viewfinder.

Sound
Choose to turn on or turn off the shutter sound.

Data storage
You can choose to save your data either to a removable SD card or to your device's internal storage.

Internal storage
Photos or videos are saved on the device memory.

SD card
Photos or videos are saved on the SD card.

Touch Block
You can disable the touch screen to avoid unintended touches when you are using the camera.

Colour and brightness
You can adjust colour and brightness manually when the color and brightness settings icon ⋮ is displayed.

White balance
This setting, which is only available in Manual capturing mode, adjusts the colour balance according to the lighting conditions. It also allows you to adjust the exposure manually in the -2.0 EV to +2.0 EV range. For example, you can increase the image brightness or decrease the overall exposure by tapping the plus or minus controls accordingly when the white balance setting icon ⋮ is displayed.

Auto
Adjusts the colour balance automatically to suit the lighting conditions.

Incandescent
Adjusts the colour balance for warm lighting conditions, such as under light bulbs.

Fluorescent
Adjusts the colour balance for fluorescent lighting.

Daylight
Adjusts the colour balance for sunny outdoor conditions.

Cloudy
Adjusts the colour balance for a cloudy sky.

Still camera settings

To adjust the still camera settings
1 Activate the camera.
2 To display all settings, tap ☰.
3 Select the setting that you want to adjust, then edit as desired.

Still camera settings overview

Resolution
Choose between several resolutions and aspect ratios before taking a photo. A photo with a higher resolution requires more memory.

20.7MP
5248×3936(4:3)
20.7 megapixel resolution with 4:3 aspect ratio. Suitable for photos you want to view on non-widescreen displays or print in high resolution.

15.5MP
5248×2952(16:9)
15.5 megapixel resolution with 16:9 aspect ratio. Suitable for photos you want to view on widescreen displays.

8MP
3264×2448(4:3)
8 megapixel resolution with 4:3 aspect ratio. Suitable for photos you want to view on non-widescreen displays or print in high resolution.

8MP
3840×2160(16:9)
8 megapixel resolution with 16:9 aspect ratio. Suitable for photos you want to view on widescreen displays.

3MP
2048×1536(4:3)
3 megapixel resolution with 4:3 aspect ratio. Suitable for photos you want to view on non-widescreen displays or print in high resolution.

2MP
1920×1080(16:9)
2 megapixel resolution with 16:9 aspect ratio. Suitable for photos you want to view on widescreen displays.

This setting is only available in Manual capturing mode.

Self-timer
With the self-timer, you can take a photo without holding the device. Use this function to take self-portraits or group photos where everyone can be in the photo. You can also use the self-timer if you want to avoid shaking the camera when taking photos.

On (10 s.)
Set a 10-second delay from when you tap the camera screen until the photo is taken.

On (2 s.)
Set a 2-second delay from when you tap the camera screen until the photo is taken.
0.5 sec.
Set a half-second delay from when you tap the camera screen until the photo is taken.

Off
The photo is taken as soon as you tap the camera screen.

Smile Shutter™
Use the Smile Shutter™ function to determine what kind of smile the camera reacts to before taking a photo.

Focus mode
The focus function controls which part of a photo should be sharp. When continuous autofocus is on, the camera keeps adjusting focus so that the area within the focus frame stays sharp.

Single auto focus
The camera automatically focuses on the selected subject. Continuous autofocus is on. Touch and hold the camera screen until the focus frame changes colour, indicating that the focus is set. The photo is taken when you release your finger.

Multi auto focus
The focus is automatically set on several areas of the image. Touch and hold the camera screen until the focus frame changes colour, indicating that the focus is set. The photo is taken when you release your finger. Continuous autofocus is off.

Face detection
The camera automatically detects up to five human faces, indicated by frames on the screen. The camera automatically focuses on the nearest face. You can also select which face to focus on by tapping it on the screen. When you tap the camera screen, a coloured frame shows which face is selected and in focus. Face detection cannot be used for all scene types. Continuous autofocus is on.

Touch focus
Touch a specific area on the camera screen to set the area of focus. Continuous autofocus is off. Touch and hold the camera screen until the focus frame changes colour, indicating that the focus is set. The photo is taken when you release your finger.

Object tracking
When you select an object by touching it in the viewfinder, the camera tracks it for you.

! This setting is only available in Manual capturing mode.

HDR
Use the HDR (High Dynamic Range) setting to take a photo against strong back light or in conditions where the contrast is sharp. HDR compensates for the loss of detail and produces a picture that is representative of both dark and bright areas.

! This setting is only available in Manual capturing mode.

ISO
You can reduce image blurring caused by dark conditions or moving subjects by increasing the ISO sensitivity. Also, if you want to take a bright image even in dark conditions, you can set the ISO sensitivity to a higher value.

Auto
Sets the ISO sensitivity automatically.

50
Sets the ISO sensitivity to 50.

100
Sets the ISO sensitivity to 100.

200
Sets the ISO sensitivity to 200.

400
Sets the ISO sensitivity to 400.
800
Sets the ISO sensitivity to 800.

1600
Sets the ISO sensitivity to 1600.

3200
Sets the ISO sensitivity to 3200.

* This setting is only available in **Manual** capturing mode.

**Metering**
This function automatically determines a well-balanced exposure by measuring the amount of light striking the image you want to capture.

- **Centre**
  Measures the centre of the image, and determines the exposure based on the brightness of the subject there.

- **Spot**
  Adjusts the exposure in a very small part of the image that you want to capture.

- **Face**
  Measures the amount of light on the face, and adjusts the exposure so that the face is neither too dark or too bright.

- **Multi**
  Divides the image into multiple regions, and measures each region to determine a well-balanced exposure.

* This setting is only available in **Manual** capturing mode.

**Image stabiliser**
When taking a photo, it can be difficult to hold the device steady. The stabiliser helps you by compensating for small movements of the hand.

* This setting is only available in **Manual** capturing mode.

**Preview**
You can choose to preview photos just after you shoot them.

- **Unlimited**
  The preview of the photo or video appears after you shoot it.

- **5 seconds**
  The preview of the photo or video appears for 5 seconds after you shoot it.

- **3 seconds**
  The preview of the photo or video appears for 3 seconds after you shoot it.

- **Edit**
  The photo or video opens for editing after you shoot it.

- **Off**
  The photo or video is saved after you shoot it, and no preview appears.

**Face recognition**
You can register faces in the Camera application so that the camera automatically focuses on these faces when they appear in the viewfinder.

**Flash**
Use the flash to take photos when lighting conditions are poor or when there is a backlight. The following options are available when you tap the flash icon on the camera screen:
Auto
The camera automatically determines if the lighting conditions require the use of a flash.

Fill flash
Use this setting when the background is brighter than the subject. This setting removes unwanted dark shadows.

Red-eye reduction
Reduces the red colour of eyes when taking a photo.

Off
The flash is turned off. Sometimes photo quality can be better without the flash, even if lighting conditions are poor. Taking a good photo without using the flash requires a steady hand. Use the self-timer to avoid blurred photos.

Torch
The flash light is turned on when you take photos.

Scene selection
Use the Scene selection feature to quickly set up the camera for common situations using pre-programmed scenes. The camera determines a number of settings for you to fit the selected scene, ensuring the best possible photo.

Off
The Scene selection feature is off and you can take photos manually.

Soft Skin
Take photos of faces using an enhanced beauty effect.

Soft snap
Use for shooting photos against a soft background.

Anti motion blur
Use for minimising camera shake when shooting a slightly dark scene.

Landscape
Use for landscape photos. The camera focuses on distant objects.

Backlight correction HDR
Use to improve details in high contrast shots. The built-in backlight correction analyses the image and automatically adjusts it to give you a perfectly lit shot.

Night portrait
Use for portrait photos taken at night or in poorly lit environments. Due to long exposure time, the camera must be held still or placed on a stable surface.

Night scene
Use when taking photos at night or in poorly lit environments. Due to long exposure time, the camera must be held still or placed on a stable surface.

Hand-held twilight
Use for taking hand-held low-light photos with reduced noise and blur.

High sensitivity
Use for taking photos without a flash under low light conditions. Reduces blur.

Gourmet
Use for shooting food arrangements in bright colour.

Pet
Use for taking photos of your pet. Reduces blur and red eyes.

Beach
Use for taking photos of seaside or lakeside scenes.

Snow
Use in bright environments to avoid overexposed photos.

Party
Use for indoor photos in poorly lit environments. This scene picks up indoor background lighting or candlelight. Due to long exposure time, the camera must be held still or placed on a stable surface.

Sports
Use for photos of fast-moving objects. Short exposure time minimises motion blurring.
Video camera settings

To adjust the video camera settings
1. Activate the camera.
2. Swipe to 🎬.
3. To display settings, tap 📷.
4. Select the setting that you want to adjust, then make your changes.

Video camera settings overview

Video resolution
Adjust the video resolution for different formats.

- **Full HD (30 fps)**
  - 1920×1080 (16:9)
  - Full HD (Full High Definition) format with 30 fps and 16:9 aspect ratio.

- **Full HD (60 fps)**
  - 1920×1080 (16:9)
  - Full HD (Full High Definition) format with 60 fps and 16:9 aspect ratio.

- **HD**
  - 1280×720 (16:9)
  - HD (High Definition) format with 16:9 aspect ratio.

- **VGA**
  - 640×480 (4:3)
  - VGA format with 4:3 aspect ratio.

- **MMS**
  - Record videos suitable for sending in multimedia messages. The recording time of this video format is limited so that video files can fit in a multimedia message.

Self-timer
With the self-timer, you can record a video without holding the device. Use it to record group videos where everyone can be in the video. You can also use the self-timer if you want to avoid shaking the camera when recording videos.

- **On (10 s.)**
  - Set a 10-second delay from when you tap the camera screen until the video begins to record.

- **On (2 s.)**
  - Set a 2-second delay from when you tap the camera screen until the video begins to record.

- **0.5 sec.**
  - Set a half-second delay from when you tap the camera screen until the video begins to record.

- **Off**
  - The video begins to record as soon as you tap the camera screen.

Smile Shutter™ (video)
Use the Smile Shutter™ function to determine what kind of smile the camera reacts to before recording a video.
Focus mode
The focus setting controls which part of a video-recorded subject should be sharp. When continuous autofocus is on, the camera keeps adjusting focus so that the area within the white focus frame stays sharp.

Single auto focus
The camera automatically focuses on the selected subject. Continuous autofocus is on.

Face detection
The camera automatically detects up to five human faces, indicated by frames on the screen. The camera automatically focuses on the nearest face. You can also select which face to focus on by tapping it on the screen. When you tap the camera screen, a yellow frame shows which face is selected and in focus. Face detection cannot be used for all scene types. Continuous autofocus is on.

Object tracking
When you select an object by touching it in the viewfinder, the camera tracks it for you.

Metering
This function automatically determines a well-balanced exposure by measuring the amount of light striking the image you want to capture.

Centre
Measures the centre of the image, and determines the exposure based on the brightness of the subject there.

Spot
Adjusts the exposure in a very small part of the image that you want to capture.

Face
Measures the amount of light on the face, and adjusts the exposure so that the face is neither too dark or too bright.

Multi
Divides the image into multiple regions, and measures each region to determine a well-balanced exposure.

! This setting is only available in Manual capturing mode.

SteadyShot™
When recording a video, it can be difficult to hold the device steady. The stabiliser helps by compensating for the small movements of your hand.

Intelligent active
Activate to remove the overall and detailed camera shakes.

Standard
Activate to remove the high-frequency camera shakes.

Off
The stabiliser is turned off.

Microphone
Select whether to pick up the surrounding sound when recording videos.

Preview
You can choose to preview videos just after you shoot them.

On
The preview of the video appears after you shoot it.

Edit
The video opens for editing after you shoot it.

Off
The video is saved after you shoot it, and no preview appears.

This is an Internet version of this publication. © Print only for private use.
Flashlight
Use the flash light to record videos when lighting conditions are poor or when there is a backlight. The video flash icon is only available on the video camera screen. Note that the video quality can sometimes be better without a light even if lighting conditions are poor.

Scene selection
The Scene selection feature helps you to quickly set up the camera for common situations using pre-programmed video scenes. Each scene setting is designed to produce the best quality video possible in a specific recording environment.

- Off
  The Scene selection feature is off and you can shoot videos manually.
- Soft snap
  Use for shooting videos against soft backgrounds.
- Landscape
  Use for videos of landscapes. The camera focuses on distant objects.
- Night scene
  When turned on, light sensitivity is increased. Use in poorly lit environments. Videos of fast-moving objects may get blurred. Hold your hand steady, or use a support. Turn off night mode when lighting conditions are good, to improve the video quality.
- Beach
  Use for videos of seaside or lakeside scenes.
- Snow
  Use in bright environments to avoid overexposed videos.
- Sports
  Use for videos of fast-moving objects. Short exposure time minimises motion blurring.
- Party
  Use for indoor videos in poorly lit environments. This scene picks up indoor background lighting or candlelight. Videos of fast-moving objects may get blurred. Hold your hand steady, or use a support.
Photos and videos in Album

Viewing photos and videos
Use the Album application to view photos and play videos that you've taken with your camera, or to view similar content that you've saved to your device. All photos and videos are displayed in a chronologically ordered grid.

1 Tap the icon to open the Album home screen menu
2 View a slideshow of all images or just the ones you've added to your favourites
3 Drag the left edge of the screen to the right to open the Album home screen menu
4 The date range of items in the current group
5 Tap a photo or video to open it in full screen view
6 Scroll up or down to view content

To view photos and videos
1 From your Home screen, tap 📷.
2 Find and tap Album.
3 Tap a photo or video that you want to view. If prompted, tap 🎥 > Video > JUST ONCE.
4 Flick left to view the next photo or video. Flick right to view the previous photo or video.

💡 If the screen orientation does not change automatically when you turn your device sideways, activate the Auto-rotate screen button under Settings > Display > Screen rotation.

To change the size of the thumbnails
• When viewing thumbnails of photos and videos in Album, spread two fingers apart to zoom in, or pinch two fingers together to zoom out.

To zoom a photo
• When you are viewing a photo, spread two fingers apart to zoom in, or pinch two fingers together to zoom out.

To watch a slideshow of your photos
1 When you are viewing a photo, tap the screen to display the toolbars, then tap ⚪️ > Slideshow to start playing all the photos in an album.
2 Tap a photo to end the slideshow.
To play a video
1 In Album, find and tap the video that you want to play.
2 Tap ①, then tap Video > JUST ONCE.
3 If the playback controls are not displayed, tap the screen to display them. To hide the controls, tap the screen again.

To pause a video
1 When a video is playing, tap the screen to display the controls.
2 Tap ②.

To fast forward and rewind a video
1 When a video is playing, tap the screen to display the controls.
2 Drag the progress bar marker left to rewind, or right to fast forward.

To adjust the volume of a video
• Press the volume key.

Sharing and managing photos and videos
You can share photos and videos that you’ve saved on your device. You can also manage them in different ways. For example, you can work with photos in batches, delete photos and link them to contacts. If you have lots of photos saved on your device, it’s a good idea to regularly transfer them to a computer or to an external storage device in order to avoid any unpredictable loss of data. Doing so also frees up more space of your device. See Managing files using a computer on page 138.

! You might not be able to copy, send or transfer copyright-protected items. Also, some items may not send if the file size is too large.

To share a photo or video
1 In Album, find and tap the photo or video that you want to share.
2 Tap the screen to display the toolbars, then tap ③.
3 Tap the application that you want to use to share the photo, then follow the steps to send it.

To use a photo as a contact picture
1 When you are viewing a photo, tap the screen to display the toolbars, then tap ④ > Use as > Contact picture.
2 Select a contact, then edit the photo as desired.
3 Tap Save.

To use a photo as wallpaper
1 When you are viewing a photo, tap the screen to display the toolbars, then tap ④ > Use as > Wallpaper.
2 Follow the instructions on the screen.

To rotate a photo
1 When you are viewing a photo, tap the screen to display the toolbars, then tap ④.
2 Tap Rotate, then select an option. The photo is saved in the new orientation.

To delete a photo or video
1 When you are viewing a photo, tap the screen to display the toolbars, then tap ④.
2 Tap Delete.
To work with batches of photos or videos in Album

1. When viewing thumbnails of photos and videos in Album, touch and hold an item until it is highlighted.
2. Tap other items that you want to work with to select them. If you want to select all items, tap \( \checkmark \) then tap Select all.
3. Use the tools in the toolbar to work with your selected items.

Analysing photos with faces in Album

You can analyse any photos on your device that feature people’s faces. Once activated, the photo analysis feature stays on, and new photos get analysed as they are added. After running an analysis, you can then group all photos of the same person in one folder.

To turn on the photo analysis feature

1. From your Home screen, tap \( \mathcal{B} \).
2. Find and tap Album.
3. Drag the left edge of the Album home screen to the right, then tap Faces. All photos on your device get analysed and grouped in the Unnamed faces folder.

To name a face

1. In the Faces tile, tap the Unnamed faces folder, then browse to the Other faces folder and choose the face that you want to name.
2. Tap Add name.
3. Type a name, then tap Done > Add as new person.

To edit a face name

1. When you are viewing a face in full screen view, tap the screen to display the toolbars, then tap \( \checkmark \) > Edit name tags.
2. Tap OK.
3. Tap the name of the face that you want to edit.
4. Edit the name, then tap Done >Add as new person.

Editing photos with the Photo editor application

You can edit and apply effects to original photos that you’ve taken with your camera. For example, you can change the light effects. After you save the edited photo, the original unchanged version of the photo remains on your device.

To edit a photo

• When you are viewing a photo, tap the screen to display the toolbars, then tap \( \checkmark \).

To crop a photo

1. When you are viewing a photo, tap the screen to display the toolbars, then tap \( \checkmark \).
2. If prompted, select Photo editor.
3. Tap \( \checkmark \) > Crop.
4. Tap Crop to select an option.
5. To adjust the crop frame, touch and hold the edge of the crop frame. When the circles at the edges disappear, drag inward or outward to resize the frame.
6. To resize all sides of the crop frame at the same time, touch and hold one of the four corners. When the circles at the edges disappear, drag the corner accordingly.
7. To move the crop frame to another area of the photo, touch and hold inside the frame, then drag it to the desired position.
8. Tap \( \checkmark \).
9. To save a copy of the photo as you cropped it, tap Save.
To apply special effects to a photo
1 When you are viewing a photo, tap the screen to display the toolbars, then tap 📷.
2 If prompted, select Photo editor.
3 Tap 📷, then select an option.
4 Edit the photo as desired, then tap Save.

To improve a photo using advanced settings
1 When you are viewing a photo, tap the screen to display the toolbars, then tap 📷.
2 If prompted, select Photo editor.
3 Tap 📷, then select an option.
4 To save a copy of the edited photo, tap Save.

To adjust the light settings for a photo
1 When you are viewing a photo, tap the screen to display the toolbars, then tap 📷.
2 If prompted, select Photo editor.
3 Tap 📷, then select an option and edit as desired.
4 To save a copy of the edited photo, tap Save.

To set the saturation level of colours in a photo
1 When you are viewing a photo, tap the screen to display the toolbars, then tap 📷.
2 If prompted, select Photo editor.
3 Tap 📷, then select an option.
4 To save a copy of the edited photo, tap Save.

Editing videos with the Video editor application
You can edit videos that you’ve taken with your camera. For example, you can trim a
video to the desired length or adjust the speed of a video. After you save the edited
video, the original unchanged version of the video remains on your device.

To trim a video
1 In Album, find and tap the video that you want to play.
2 Tap the screen to display the toolbars, then tap 📷 > Trim.
3 To move the trim frame to another part of the timeline, touch and hold the edge
of the trim frame and drag it to the desired position, then tap Apply.
4 To save a copy of the trimmed video, tap Save.

To adjust the speed of a video
1 In Album, find and tap the video that you want to play.
2 Tap the screen to display the toolbars, then tap 📷 > Speed.
3 Select an option, then touch and hold the edge of the timeline and drag it to
the desired position and tap Apply.
4 To save a copy of the edited video, tap Save.

Hiding photos and videos
You can hide any photos and videos from the Album home screen. Once photos and
videos are hidden from the Album home screen, they can only be viewed from the
Hidden folder.

To hide a photo or video
1 In Album, find and tap the photo or video that you want to hide.
2 Tap the screen to display the toolbars, then tap 📷.
3 Tap Hide > OK.
To view your hidden photos and videos
1 In Album, drag the left edge of the Album home screen to the right, then tap Hidden.
2 Tap a photo or video to view it.
3 Flick left to view the next photo or video. Flick right to view the previous photo or video.

To unhide a photo or video
1 In Album, drag the left edge of the Album home screen to the right, then tap Hidden.
2 Tap a photo or video that you want to unhide.
3 Tap the screen to display the toolbars, then tap ✻
4 Tap Don't hide.

Album home screen menu
Through the Album home screen menu you can browse to all your photo albums, including photos and videos taken by your device’s camera using special effects, as well as content that you share online via services such as PlayMemories Online, Picasa™ and Facebook. Once you are logged in to such services, you can manage content and view online images. From the Album application, you can also add geotags to photos, perform basic editing tasks, and use methods such as Bluetooth® wireless technology and email to share content.

1 View photos and videos using the PlayMemories Online service
2 Return to the Album application home screen to view all content
3 View your favourite photos and videos
4 View all videos saved to your device
5 View your photos on a map or in Globe view
6 View photos and videos that you have hidden from view
7 View all photos and videos taken by your device’s camera using special effects
8 View all photos and videos saved to your device in different folders
9 View all photos with faces
10 View photos and videos on devices in the same network
11 Open the settings menu for the Album application
12 Scroll up or down to view content
13 Open web support

! The PlayMemories Online service is not available in all countries or regions.
To view photos from online services in Album
1 From your Home screen, tap 📷.
2 Find and tap Album, then drag the left edge of the Album home screen to the right.
3 Tap the desired online service, then follow the on-screen instructions to get started with it. All available online albums that you have uploaded to the service are displayed.
4 Tap any album to view its content, then tap a photo in the album.
5 Flick left to view the next photo or video. Flick right to view the previous photo or video.

Viewing your photos on a map
Adding location information to photos is referred to as geotagging. You can view and tag your photos on a map and show friends and family where you were when you took a particular photo. See Adding the geographical position to your photos on page 94 for more information.

If you have turned on location detection and activated geotagging in the camera, you can tag your photos directly for map viewing at a later stage.

To add a geotag to a photo
1 When you are viewing a photo, tap the screen to display the toolbars.
2 Tap 📍, then tap Add geotag to open the map screen.
3 Tap on the map to set the location for the photo.
4 To reset the location for the photo, tap the new location on the map.
5 When you are finished, tap OK.

To view geotagged photos on a map
1 From your Home screen, tap 📷.
2 Find and tap Album.
3 Drag the left edge of the Album home screen to the right, then tap Places.
4 Tap the photo that you want to view on a map.
To view geotagged photos on a globe
1. From your Home screen, tap 🌍.
2. Find and tap Album.
3. Drag the left edge of the Album home screen to the right, then tap Places ⏳.
4. Tap the photo that you want to view on a globe.

To change the geotag of a photo
1. When viewing a photo on the map in Album, touch and hold the photo until its frame turns blue, then tap the desired location on the map.
2. Tap OK.

To change the map view
• When viewing the map in Album, tap ⬦, then select Classic view or Satellite view.
Videos

Watching videos in the Video application

Use the Video application to play movies and other video content that you've saved or downloaded to your device. The Video application also helps you get poster art, plot summaries, genre info and director details for each movie. You can also play your movies on other devices that are connected to the same network.

Some video files may not be playable in the Video application.

To play a video in Video

1. From your Home screen, tap Video, then find and tap Video.
2. Find and tap the video that you want to play. If the video is not displayed on the screen, drag the left edge of the screen to the right to open the Video home screen menu, then find and tap the video that you want to play.
3. To display or hide the controls, tap the screen.
4. To pause playing, tap \( \text{\textsuperscript{\textbullet}} \). To resume playing, tap \( \text{\textsuperscript{\textbullet}} \).
5. To rewind, drag the progress bar marker to the left. To fast forward, drag the progress bar marker to the right.

To play a video on an external device

1. When the video is playing, tap \( \text{\textbullet} \) to display all the controls.
2. Tap \( \text{\textbullet} \) > Throw.
3. Select an external device on which to play the video. If there is no external device available, follow the on-screen instructions to add one.
To change settings in Video
1 From your Home screen, tap  Video, then find and tap Video.
2 Tap Settings, then change the settings as desired.

To change the sound settings while a video is playing
1 While a video is playing, tap the screen to display the controls.
2 Tap Sound settings, then change the settings as desired.
3 When you’re finished, tap OK.

To share a video
1 When a video is playing, tap Share.
2 Tap the application that you want to use to share the selected video, then follow the relevant steps to send it.

Transferring video content to your device
Before you start using the Movies application, it’s a good idea to transfer movies, TV shows and other video content to your device from other devices, such as a computer. There are several ways to transfer your content:
• For Windows® only: Connect your device to a computer using a USB cable and drag and drop the video files directly using the file manager application on the computer. See Managing files using a computer on page 138.
• If you have a PC or an Apple® Mac® computer, use Xperia™ Companion to organise content and transfer video files to your device.

Managing video content

To get movie information manually
1 Make sure that your device has an active data connection.
2 When a video is playing, tap the screen to display the controls.
3 Tap Information.
4 Tap Search for Info.
5 In the search field, enter keywords for the video, then tap the confirm key on the keyboard. All matches are displayed in a list.
6 Select a search result, then tap Done. The download of the information begins.

⚠️ You can get information about newly added videos automatically every time the Video application opens if you activate the Get video details button under Settings.

✔️ If the downloaded information is not correct, search again using different keywords.

To clear information about a video
1 When a video is playing, tap the screen to display the controls.
2 Tap Information.
3 Tap Clear info.

To delete a video
1 From your Home screen, tap Video, then find and tap Video.
2 Drag the left edge of the screen to the right to open the Video home screen menu, then browse through the different categories and to the video file that you want to delete.
3 Touch and hold the video thumbnail, then tap Delete from the list that appears.
4 Tap Delete again to confirm.

Movie Creator
The Xperia™ Movie Creator automatically creates short videos of around 30 seconds in length using existing photos and videos. The application automatically determines the timeline to create its movie. For example, it could take a selection of photos and
videos from a Saturday afternoon outing or from a random seven-day period and create a movie for you. When this highlight-style movie is ready, you get notified. You can then edit it as desired. For example, you can edit the title, delete scenes, change the music or add more photos and videos.

**To open Movie Creator**
1. From your Home screen, tap 📺.
2. Find and tap **Movie Creator**.

! If no photos or videos are saved on your device, no functionality is available when you open the Movie Creator application.

**To turn off Movie Creator notifications**
1. From your Home screen, tap 📺.
2. Find and tap **Movie Creator**.
3. Tap 📲, then tap Settings and deactivate Notifications.

**To disable Movie Creator**
1. From your Home screen, tap 📺.
2. Find and tap **Settings > Apps**.
3. Find and tap **Movie Creator > DISABLE**.
Connectivity

Mirroring the screen of your device on a TV using a cable

You can connect your device to a compatible TV set using an MHL cable and mirror the screen of your device on the TV screen.

- MHL and HDMI cables and adaptors are sold separately.
- Sony does not guarantee that all types of MHL and HDMI cables and adaptors are supported by your device.

To view content from your device on a TV which supports MHL input

1. Connect your device to the TV using an MHL cable. ! appears in your device's status bar after a connection is established.
2. The TV displays the screen of your device.

   If your device fails to detect the display that is connected to the MHL cable, reconnect the MHL cable and tap Settings > Device connection > USB Connectivity > Detect USB device.

To view content from your device on a TV which supports HDMI™ input

1. Connect your device to an MHL adaptor, and connect the adaptor to a USB power supply.
2. Connect the adaptor to a TV using an HDMI™ cable. ! appears in your device's status bar after a connection is established.
3. The TV displays the screen of your device.

To view help about using a TV remote control

1. While your device is connected to the TV set, drag the status bar downwards to open the Notification panel.
2. Tap MHL connected. The MHL settings appear on the TV screen.

   You can select Video Output Size to adjust the size of the output on the TV screen. If the TV already has an auto scaling option enabled, this setting does not appear under the MHL settings.

   You can also press the yellow button on the TV remote control to open the Notification panel.

To disconnect your device from a TV set

- Disconnect the MHL™ cable or the MHL adaptor from your device.

Mirroring the screen of your device wirelessly on a TV

You can use the Screen mirroring feature to show the screen of your device on a TV or other large display without using a cable connection. Wi-Fi Direct™ technology creates a wireless connection between the two devices, so you can sit back and enjoy your favourite photos from the comfort of your couch. You can also use this feature to listen to music from your device via the TV’s speakers.

   When using screen mirroring, the image quality may sometimes be negatively impacted if there is interference from other Wi-Fi® networks.
To mirror the screen of your device on a TV screen

1 TV: Follow the instructions in the User guide of your TV to turn on the screen mirroring function.
2 Your device: From your Home screen, tap .
3 Find and tap Settings > Device connection > Screen mirroring.
4 Tap Start.
5 Tap OK and select a device.

! Your TV must support screen mirroring based on Wi-Fi CERTIFIED Miracast™ for the functionality to work. If your TV does not support screen mirroring, you may need to purchase a wireless display adapter separately. Also, when using screen mirroring, do not cover the Wi-Fi antenna area of your device.

To stop screen mirroring between devices

1 From your Home screen, tap .
2 Find and tap Settings > Device connection > Screen mirroring.
3 Tap Disconnect, then tap OK.

Sharing content with DLNA Certified™ devices

You can view or play media content saved to your device on other devices such as a TV or a computer. These devices must be on the same wireless network and can be Sony TVs or speakers, or products that are DLNA Certified™ by the Digital Living Network Alliance. You can also view or play content from other DLNA Certified™ devices on your device.

After you set up media sharing between devices, you can, for example, listen to music files stored on your home computer from your device, or view photos taken with your device's camera on a large-screen TV.

Playing files from DLNA Certified™ devices on your device

When you play files from another DLNA Certified™ device on your device, this other device acts as a server. In other words, it shares content over a network. The server device must have its content sharing function enabled and give access permission to your device. It also must be connected to the same Wi-Fi® network as your device.

To play a shared music track on your device

1 Make sure the devices that you want to share files with are connected to the same Wi-Fi® network as your device.
2 From your Home screen, tap , then find and tap Music.
3 Drag the left edge of the Music home screen to the right, then tap Home network.
4 Select a device from the list of connected devices.
5 Browse the folders of the connected device and select the track that you want to play. Once selected, the track starts playing automatically.

To play a shared video on your device

1 Make sure the devices that you want to share files with are connected to the same Wi-Fi® network as your device.
2 From your Home screen, tap , then find and tap Video.
3 Drag the left edge of the Video home screen to the right, then tap Home network.
4 Select a device from the list of connected devices.
5 Browse the folders of the connected device and select the video that you want to play.
To view a shared photo on your device

1. Make sure the devices that you want to share files with are connected to the same Wi-Fi® network as your device.
2. From your Home screen, tap , then find and tap Album.
3. Drag the left edge of the Album home screen to the right, and tap Home network.
4. Select a device from the list of connected devices.
5. Browse the folders of the connected device and select a photo to view it.

Playing files from your device on DLNA Certified™ devices

Before you can view or play media files from your device on other DLNA Certified™ devices, you must set up file sharing on your device. The devices that you share content with are called client devices. For example, a TV, computer or tablet can act as client devices. Your device works as a media server when it makes content available to client devices. When you set up file sharing on your device, you must also give access permission to client devices. After you do so, such devices appear as registered devices. Devices that are waiting for access permission are listed as pending devices.

To set up file sharing with other DLNA Certified™ devices

1. Connect your device to a Wi-Fi® network.
2. From your Home screen, tap , then find and tap Settings > Device connection > Media server.
3. Drag the slider beside Share media to the right.
4. Use your computer or other DLNA™ client devices on the same Wi-Fi® network to connect to your device.
5. A notification appears in the status bar of your device. Open the notification and set access permissions for each client device attempting to connect to your device.

The steps for accessing media on your device using a DLNA™ client differ between client devices. Refer to your client device User guide for more information. If your device is inaccessible to a client on the network, check if your Wi-Fi® network is working.

You can also access the Media server menu from certain applications like Music, Album or Video by dragging the left edge of the application’s home screen to the right and then tapping Settings > Media server.

To stop sharing files with other DLNA Certified™ devices

1. From your Home screen, tap .
2. Find and tap Settings > Device connection > Media server.
3. Drag the slider beside Share media to the left.

To set access permissions for a pending device

1. From your Home screen, tap .
2. Find and tap Settings > Device connection > Media server.
3. Select a device from the Pending devices list.
4. Select an access permission level.

To change the name of a registered device

1. From your Home screen, tap .
2. Find and tap Settings > Device connection > Media server.
3. Select a device from the Registered devices list; then select Change name.
4. Enter a new name for the device.

To change the access level of a registered device

1. From your Home screen, tap .
2. Find and tap Settings > Device connection > Media server.
3. Select a device from the Registered devices list.
4. Tap Change access level and select an option.
To get help with sharing content with other DLNA Certified™ devices
1. From your Home screen, tap 📲.
2. Find and tap **Settings > Device connection > Media server**.
3. Tap ⬇️ and then tap **Help**.

Playing files on a Digital Media Renderer device
Using DLNA™ technology, you can push media content saved on your device to another device connected to the same Wi-Fi® network. The other device must be able to function as a Digital Media Renderer (DMR) device and render or play content received from your device. A TV with DLNA features or a PC running Windows® 7 or higher are examples of DMR devices.

⚠️ The settings for enabling the Digital Media Renderer may vary depending on the device. Refer to the user guide of the DMR device for more information.

⚠️ Content secured with Digital Rights Management (DRM) cannot be played on a Digital Media Renderer device using DLNA™ technology.

To view photos or videos from your device on a DMR device
1. Make sure that you have correctly set up the DMR device and that it is connected to the same Wi-Fi® network as your device.
2. From your Home screen, tap 📲.
3. Find and tap **Album**.
4. Browse and open the photos or videos that you want to view.
5. Tap the screen to display the toolbar, then tap 📚 and select a DMR device that you want to share your content with. The selected content starts playing in chronological order on the device that you select.
6. To disconnect from the DMR device, tap 📲 and select **Disconnect**. The file stops playing on the DMR device but continues playing on your device.

🌟 You can also share a video from the Video application on your device by tapping the video and then tapping 📚.

To play a music track from your device on a DMR device
1. Make sure that you have correctly set up the DMR device and that it is connected to the same Wi-Fi® network as your device.
2. From your Home screen, tap 📲, then find and tap 📲.
3. Select a music category and browse to the track that you want to share, then tap the track.
4. Tap 📚 and select a DMR device to share your content with. The track plays automatically on the device that you select.
5. To disconnect from the DMR device, tap 📲 and select your device. The track stops playing on the DMR device but continues playing on your device.

Connecting your device to USB peripherals
You can use a USB Host adapter to connect your device to USB peripherals such as USB mass storage devices and USB mice. If the USB peripheral device has a micro USB connector, a USB Host adapter is not necessary.

⚠️ This device has a capless USB port. If your device gets exposed to water, ensure the USB port is completely dry before inserting a USB cable.

⚠️ USB Host adapters are sold separately. Sony does not guarantee that all USB peripherals are supported by your device.
To connect a USB accessory using a USB host adapter
1 Attach the USB Host adapter to your device, then connect the adapter to the USB accessory.
2 From your Home screen, tap 
3 Find and tap Settings > Device connection > USB Connectivity > Detect USB device.

! Additional steps or software may be required to set up game controllers, USB audio and USB Ethernet accessories. Sony does not guarantee that all USB accessories are supported by your device.

To access content on a USB mass storage device using a USB Host adapter
1 Attach the USB Host adapter to your device, then connect the adapter to the USB mass storage device.
2 From your Home screen, tap 
3 Find and tap Settings > Device connection > USB Connectivity > Detect USB device.
4 To access files and folders on the USB storage device, use a file manager app such as File Commander.

! You can also open the relevant media application on your device to view content directly. For example, you can open the Album application to view photos stored on USB mass storage devices.

To disconnect a USB mass storage device
1 To open the Notification Panel, drag the status bar downwards, then tap USB storage connected.
2 Tap OK.
3 Detach the USB Host adapter from your device.

To connect a USB accessory using a micro USB connector
1 Attach the micro USB connector of the USB accessory to your device.
2 From your Home screen, tap 
3 Find and tap Settings > Device connection > USB Connectivity > Detect USB device.

! Sony does not guarantee that all USB accessories with a micro USB connector are supported by your device.

Connecting your device to a DUALSHOCK™ series wireless controller
You can play games stored on your device using a DUALSHOCK™ series wireless controller. You can also mirror your device on a TV or other display. For more information about Screen mirroring, refer to the relevant section of the User guide.

To connect a DUALSHOCK™4 wireless controller to your device
1 From your Home screen, tap 
2 Find and tap Settings > Device connection > DUALSHOCK™ series.
3 Tap Pair controller, then follow the on-screen instructions to complete the connection.

NFC
Use Near Field Communications (NFC) to share data with other devices, such as a video, photo, web page address, music file or contact. You can also use NFC to scan tags that give you more information about a product or service as well as tags that activate certain functions on your device.
NFC is a wireless technology with a maximum range of one centimetre, so the devices sharing data must be held close to each other. Before you can use NFC, you must first turn on the NFC function, and the screen of your device must be active.

! NFC may not be available in all countries and/or regions.

To turn on the NFC function
1 From your Home screen, tap 📲.
2 Find and tap Settings > More.
3 Tap the on-off switch beside NFC.

To share a contact with another device using NFC
1 Make sure that both devices have the NFC function turned on, and that both screens are active.
2 To view contacts, go to your Home screen, tap 📲, then tap 📲.
3 Tap the contact that you want to share.
4 Hold your device and the receiving device back to back so that the NFC detection areas of each device touch each other. When the devices connect, a thumbnail of the contact appears.
5 Tap the thumbnail to start the transfer.
6 When the transfer is done, the contact information is displayed on the screen of the receiving device and is also saved on the receiving device.

To share a music file with another device using NFC
1 Make sure that both your device and the receiving device have the NFC function turned on, and that both screens are active.
2 To open the Music application, tap 📲, then find and tap 📲.
3 Select a music category and browse to the track you want to share.
4 Tap the track to play it. You can then tap 🎨 to pause the track. The transfer works whether the track is playing or paused.
5 Hold your device and the receiving device back to back so that the NFC detection areas of each device touch each other. When the devices connect, a thumbnail of the track appears.
6 Tap the thumbnail to start the transfer.
7 When the transfer is done, the music file plays immediately on the receiving device. At the same time, the file is saved on the receiving device.

To share a photo or video with another device using NFC
1 Make sure that both devices have the NFC function turned on, and that both screens are active.
2 To view photos and videos in your device, go to your Home screen, tap 📲, then find and tap 📲. 📸
3 Tap the photo or video that you want to share.
4 Hold your device and the receiving device back to back so that the NFC detection areas of each device touch each other. When the devices connect, a thumbnail of the track appears.
5 Tap the thumbnail to start the transfer.
6 When the transfer is done, the photo or video is displayed on the screen of the receiving device. At the same time, the item is saved on the receiving device.

To share a web address with another device using NFC
1 Make sure that both devices have the NFC function turned on, and that both screens are active.
2 From your Home screen, tap 📲.
3 To open the web browser, find and tap 📲.
4 Load the web page that you want to share.
5 Hold your device and the receiving device back to back so that the NFC detection areas of each device touch each other. When the devices connect, a thumbnail appears.
6 Tap the thumbnail to start the transfer.
7 When the transfer is done, the web page is displayed on the screen of the receiving device.
Scanning NFC tags

Your device can scan various kinds of NFC tags. For example, it can scan embedded tags on a poster, on a billboard advertisement, or beside a product in a retail store. You can receive additional information, such as a web address.

To scan an NFC tag

1. Make sure that your device has the NFC function turned on and that the screen is active.
2. Place your device over the tag so that the NFC detection area touches it. Your device scans the tag and displays the content collected. Tap the content of the tag to open it.

Connecting to an NFC compatible device

You can connect your device to other NFC compatible devices produced by Sony, such as a speaker or a headphone. When establishing this kind of connection, refer to the User guide of the compatible device for more information.

! You may need to have Wi-Fi® or Bluetooth® activated on both devices for the connection to work.

Bluetooth® wireless technology

Use the Bluetooth® function to send files to other Bluetooth® compatible devices, or to connect to handsfree accessories. Bluetooth® connections work better within 10 metres (33 feet), with no solid objects in between. In some cases you have to manually pair your device with other Bluetooth® devices.

! Interoperability and compatibility among Bluetooth® devices can vary.

! If you are using a device with multiple users, each user can change the Bluetooth® settings, and the changes affect all users.

To turn on the Bluetooth® function

1. From your Home screen, tap  
2. Find and tap  
3. Tap the on-off switch beside Bluetooth so that the Bluetooth® function is turned on. Your device is now visible to nearby devices and a list of available Bluetooth® devices appears.

Naming your device

You can give your device a name. This name is shown to other devices after you have turned on the Bluetooth® function and your device is set to visible.

To give your device a name

1. Make sure that the Bluetooth® function is turned on.
2. From your Home screen, tap  
3. Find and tap  
4. Tap 😎 > Rename this device.
5. Enter a name for your device.
6. Tap Rename.

Pairing with another Bluetooth® device

When you pair your device with another device, you can, for example, connect your device to a Bluetooth® headset or a Bluetooth® car kit and use these other devices to share music.
Once you pair your device with another Bluetooth® device, your device remembers this pairing. When pairing your device with a Bluetooth® device, you may need to enter a passcode. Your device will automatically try the generic passcode 0000. If this does not work, refer to the user guide for your Bluetooth® device to get the device passcode. You do not need to re-enter the passcode the next time you connect to a previously paired Bluetooth® device.

⚠️ Some Bluetooth® devices, for example, most Bluetooth® headsets, require you to both pair and connect with the other device.

⚠️ You can pair your device with several Bluetooth® devices, but you can only connect to one Bluetooth® profile at the same time.

To pair your device with another Bluetooth® device
1. Make sure that the device you want to pair with has the Bluetooth® function activated and is visible to other Bluetooth® devices.
2. From your device’s Home screen, tap ☰.
3. Find and tap Settings > Bluetooth.
4. Drag the slider beside Bluetooth to turn on the Bluetooth® function. A list of available Bluetooth® devices appears.
5. Tap the Bluetooth® device that you want to pair with.
6. Enter a passcode, if required, or confirm the same passcode on both devices.

To connect your device to another Bluetooth® device
1. From your Home screen, tap ☰.
2. Find and tap Settings > Bluetooth.
3. Tap the Bluetooth® device to which you want to connect.

To unpair a Bluetooth® device
1. From your Home screen, tap ☰.
2. Find and tap Settings > Bluetooth.
3. Under Paired devices, tap ☰ beside the name of the device that you want to unpair.
4. Tap Forget.

Sending and receiving items using Bluetooth® technology
Use Bluetooth® technology to share items with other Bluetooth® compatible devices such as phones or computers. You can send and receive the following kinds of items:

- Photos and videos
- Music and other audio files
- Web pages

To send items using Bluetooth®
1. Receiving device: Make sure the Bluetooth® function is turned on and that the device is visible to other Bluetooth® devices.
2. Sending device: Open the application which contains the item that you want to send, and scroll to the item.
3. Depending on the application and on the item that you want to send, you may need to, for example, touch and hold the item, open the item, and press ☰. Other ways to send an item may exist.
4. Select Bluetooth.
5. Turn on Bluetooth® if you are asked to do so.
6. Tap the name of the receiving device.
7. Receiving device: If asked, accept the connection.
8. Sending device: If asked, confirm the transfer to the receiving device.
9. Receiving device: Accept the incoming item.
To receive items using Bluetooth®

1. Make sure that the Bluetooth® function is on and is visible to other Bluetooth® devices.
2. The sending device now starts sending data to your device.
3. If prompted, enter the same passcode on both devices, or confirm the suggested passcode.
4. When you are notified of an incoming file to your device, drag the status bar downwards and tap the notification to accept the file transfer.
5. Tap Accept to start the file transfer.
6. To view the progress of the transfer, drag the status bar downwards.
7. To open a received item, drag the status bar downwards and tap the relevant notification.

To view files you have received using Bluetooth®

1. From your Home screen, tap 📱.
2. Find and tap Settings > Bluetooth.
3. Press ⏬ and select Show received files.
Smart apps and features that save you time

Controlling accessories and settings with Smart Connect™

Use the Smart Connect™ application to set what happens in your device when you connect or disconnect an accessory. For example, you can decide to always start the FM radio application when you connect a headset.

You can also set Smart Connect™ to read out incoming text messages. Or you can use the application to set a specific action or a group of actions to launch on your device at certain times of the day. For example, when you connect your headset between 7am and 9am, you can decide that:

- The FM radio application starts.
- The ring volume is set to vibrate.

With Smart Connect™, you can also manage accessories such as Xperia™ SmartTags or a watch from the Sony SmartWatch series. Refer to the User guide of the specific accessory for more information.

! If you are using a device with multiple users, you must log in as the owner, that is, the primary user, to use the Smart Connect™ application.

| 1  | Tap to display available accessories |
| 2  | Add an accessory or an event         |
| 3  | View menu options                   |
| 4  | Tap to display all events            |
| 5  | Tap to activate an event             |
| 6  | Tap to view details of an event      |
To create a Smart Connect™ event
1. From your Home screen, tap \( \text{ } \), then find and tap \( \text{ } \).
2. If you are opening Smart Connect™ for the first time, tap OK to close the introduction screen.
3. On the Events tab, tap \( \text{ } \).
4. If you are creating an event for the first time, tap OK again to close the introduction screen.
5. Add conditions under which you want to trigger the event. A condition could be the connection with an accessory, or a specific time interval, or both.
6. Tap \( \text{ } \) to continue.
7. Add what you want to happen when you connect an accessory, and set other settings as desired.
8. Tap \( \text{ } \) to continue.
9. Set an event name, then tap Finish.

To edit a Smart Connect™ event
1. Start the Smart Connect™ application.
2. On the Events tab, tap an event.
3. If the event is switched off, drag the slider to the right to turn it on.
4. Tap Edit event, then adjust the settings as desired.

To delete an event
1. Start the Smart Connect™ application.
2. On the Events tab, touch and hold the event that you want to delete, then tap Delete event.
3. Tap Delete to confirm.

To set Smart Connect™ to read out incoming text messages
1. Start the Smart Connect™ application.
2. Tap \( \text{ } \), then tap Settings.
3. Mark the checkbox beside Text to speech, then confirm activation, if necessary.

If this feature is turned on, all incoming messages are read aloud. To protect your privacy, you may need to turn off this feature if you are using your device in a public place or at work, for example.

Managing accessories
Use the Smart Connect™ application to manage a range of smart accessories that you can connect to your device, including SmartTags, SmartWatch and Smart Wireless Headset pro from Sony. Smart Connect™ downloads any necessary applications and also finds third-party applications, when available. Previously connected accessories show in a list that allows you to get more information about the features of each accessory.

To pair and connect an accessory
1. Start the Smart Connect™ application. If you are opening Smart Connect™ for the first time, tap OK to close the introduction screen.
2. Tap Accessories, then tap \( \text{ } \).
3. Turn on the Bluetooth® function if it is not already on, then tap the name of the accessory that you want to pair and connect with.
4. If required, enter a passcode, or confirm the same passcode on both your device and the accessory.
To adjust the settings for a connected accessory
1 Pair and connect the accessory with your device.
2 Start the Smart Connect™ application.
3 Tap Accessories, then tap the name of the connected accessory.
4 Adjust the desired settings.

Using your device as a fitness hub with ANT+™
You can use your device with health and fitness products that also support ANT+™ technology. For example, if you go running with an ANT+™ compatible heart rate monitor and a foot pod (to measure pace and distance), you can collect all the data from the run on your device. You can then analyse your performance and see how you can improve.

You can download a range of applications from Google Play™ that support ANT+™ sport, fitness and health devices. For information about ANT+™ compatible products, go to www.thisisant.com/directory.

Using your device as a wallet
Use your device as a wallet to pay for goods without reaching for your real wallet. All of your installed payment services are put together to be viewed and managed. Note that when making a payment, you must first turn on the NFC function before your device touches a card reader. For more information about NFC, see NFC on page 119.

! Mobile payment services may not yet be available in all regions.

To manage payment services
1 From your Home screen, tap 📦.
2 Find and tap Settings > Tap & pay. A list of payment services appears.
3 Manage the payment services as desired, for example, change your default payment service.
Travel and maps

Using location services
Location services allow applications such as Maps and the camera to use information from mobile and Wi-Fi® networks as well as Global Positioning System (GPS) information to determine your approximate location. If you're not within a clear line of sight to GPS satellites, your device can determine your location using the Wi-Fi® function. And if you're not within range of a Wi-Fi® network, your device can determine your location using your mobile network.

In order to use your device to find out where you are, you need to enable location services.

⚠️ You may incur data connection charges when you connect to the Internet from your device.

To enable or disable location services
1. From your Home screen, tap ⚙.
2. Find and tap Settings > Location, then tap the on-off switch accordingly to enable or disable location services.
3. If you selected to enable location services in step 2, tap Agree to confirm.

Improving GPS accuracy
The first time you use the GPS function in your device, it can take 5 to 10 minutes for your location to be found. To help the search, make sure you have a clear view of the sky. Stand still and don’t cover the GPS antenna (the highlighted area in the image). GPS signals can pass through clouds and plastic, but not through most solid objects such as buildings and mountains. If your location isn’t found after a few minutes, move to another location.

Google Maps™ and navigation
Use Google Maps™ to track your current location, view real-time traffic situations and receive detailed directions to your destination.

The Google Maps™ application requires an Internet connection when used online. You may incur data connection charges when you connect to the Internet from your device. To get more detailed information about how to use this application, go to http://support.google.com and click the “Maps for mobile” link.

⚠️ The Google Maps™ application may not be available in every market, country or region.

To use Google Maps™
1. From your Home screen, tap 🔍.
2. Find and tap Maps.

Using data traffic when travelling
When you travel outside of your home mobile network, you may need to access the Internet using mobile data traffic. If so, you need to activate data roaming on your
device. You may incur additional charges when you activate data roaming. It is recommended to check the relevant data transmission charges in advance.

⚠️ If you are using a device with multiple users, you may need to log in as the owner, that is, the primary user, to activate or deactivate data roaming.

**To activate data roaming**
1. From your Home screen, tap ✉️.
2. Find and tap Settings > More > Mobile networks.
3. Drag the slider beside Data roaming to the right.

⚠️ You can’t activate data roaming while mobile data traffic is turned off.

### Using your device with a car infotainment system

Connect your device to a MirrorLink™ certified car infotainment system using a USB cable to, for example, use a navigation app or play music from your device while driving. When connected, you can navigate the apps using the car infotainment system controls.

⚠️ Some applications may not be available during MirrorLink™ connection. Also, protected data, such as videos that are strictly protected under Digital Rights Management (DRM), is not made available via MirrorLink™.

**To connect your device to a car infotainment system**
- Connect your device and the car infotainment system using a USB cable. The screen of your device appears on the screen of the infotainment system.

⚠️ You may need to start MirrorLink™ manually if the connection between your device and the infotainment system is not established automatically.

**To start MirrorLink™ manually**
1. Make sure that your device is connected to the car infotainment system using a USB cable.
2. From your Home screen, tap ✉️.
3. Find and tap Settings > Xperia™ Connectivity > MirrorLink™.
4. Tap Start MirrorLink™, then tap OK.
5. If the connection still fails, tap Network address to change to another network address in case the same network address is being used by other services such as Bluetooth® and Wi-Fi®, and then try again.

### Airplane mode

In Airplane mode, the network and radio transceivers are turned off to prevent disturbance to sensitive equipment. However, you can still play games, listen to music, watch videos and other content, as long as all this content is saved on your memory card or internal storage. You can also be notified by alarms, if alarms are activated.

⚠️ Turning on Airplane mode reduces battery consumption.
To turn on Airplane mode
1. From your Home screen, tap 
2. Find and tap Settings > More.
3. Drag the slider beside Airplane mode to the right.
Calendar and alarm clock

Calendar

Use the Calendar application to manage your time schedule. If you have signed in to and synchronised your device with one or several online accounts that include calendars, for example, your Google™ account or Xperia™ with Facebook account, then calendar events from these accounts will also appear in the Calendar application. You can select which calendars you want to integrate into the combined Calendar view.

When an appointment time approaches, your device plays a notification sound to remind you. Also, 💰 appears in the status bar.

1. Select a view type and the calendars that you want to view
2. Return to the current date
3. Access settings and other options
4. Flick left or right to browse more quickly
5. Selected date
6. Agenda for the selected day
7. Add a calendar event

To create a calendar event
1. From your Home screen, tap ☰, then tap Calendar.
2. Tap ☰.
3. If you have synchronised your calendar with one or more accounts, select the account to which you want to add this event. If you only want to add this event on your device, tap Device calendar.
4. Enter or select the desired information and add attendees to the event.
5. To save the event and send out invitations, tap Save.

To view a calendar event
1. From your Home screen, tap ☰, then tap Calendar.
2. Tap the event that you want to view.

To view multiple calendars
1. From your Home screen, tap ☰, then find and tap Calendar.
2. Tap ☰, then mark the checkboxes for the calendars that you want to view.

To zoom the calendar view
• When the Week or the Day view is selected, pinch the screen to zoom in.
To display national holidays in the Calendar application
1. From your Home screen, tap 📱, then tap Calendar.
2. Tap ; then tap Settings.
3. Tap National holidays.
4. Select an option, or a combination of options, then tap OK.

To display birthdays in the Calendar application
1. From your Home screen, tap 📱, then tap Calendar.
2. Tap ; then tap Settings > Birthdays.
3. Drag the slider beside Birthdays to the right.

To display weather forecasts in the Calendar application
1. From your Home screen, tap 📱, then tap Calendar.
2. Tap ; then tap Settings.
3. Tap Weather forecast, then drag the slider beside Weather forecast to the right.
4. If location services are disabled, tap Home location, then search for the city that you want to add.

For more information about how to enable location services, see Using location services on page 127.

To change weather forecast settings in the Calendar application
1. From your Home screen, tap 📱, then tap Calendar.
2. Tap ; then tap Settings.
3. Tap Weather forecast.
4. Adjust the settings as desired.

Alarm and clock
You can set one or several alarms and use any sound saved on your device as the alarm signal. The alarm does not sound if your device is turned off. But it does sound when the device is set to silent mode.

The alarm time format displayed is the same as the format you select for your general time settings, for example, 12-hour or 24-hour.

1. Access the alarm home screen
2. View a world clock and adjust settings
3. Access the stopwatch function
4. Access the timer function
5. View options
6. Open date and time settings for the clock
To set an alarm
1. From your Home screen, tap.
2. Find and tap Clock.
3. Tap .
4. Tap Time and select the desired value.
5. Tap OK.
6. If desired, edit other alarm settings.
7. Tap Save.

To edit an existing alarm
1. Open the Alarm & clock application, then tap the alarm that you want to edit.
2. Make the desired changes.
3. Tap Save.

To turn on or off an alarm
1. Open the Alarm & clock application, then drag the slider next to the alarm to the on or off position.
2. Open the Alarm & clock application, then touch and hold the alarm that you want to delete.
3. Tap Delete alarm, then tap Yes.

To set the sound for an alarm
1. Open the Alarm & clock application, then tap the alarm that you want to edit.
2. Tap Alarm sound and select an option, or tap and select a music file.
3. Tap Done, then tap Save.

To set a recurring alarm
1. Open the Alarm & clock application, then tap the alarm that you want to edit.
2. Tap Repeat.
3. Mark the checkboxes for the relevant days, then tap OK.
4. Tap Save.

To activate the vibrate function for an alarm
1. Open the Alarm & clock application, then tap the alarm that you want to edit.
2. Mark the Vibrate checkbox.
3. Tap Save.

To snooze an alarm when it sounds
- Tap Snooze.

To turn off an alarm when it sounds
- Slide to the right.
Accessibility

Magnification gestures
Magnification gestures allow you to zoom in to parts of the screen by tapping an area of the touchscreen three times in succession.

To enable or disable Magnification gestures
1. From your Home screen, tap 📱.
2. Find and tap Settings > Accessibility > Magnification gestures.
3. Tap the on-off switch.

To magnify an area and pan across the screen
1. Make sure that Magnification gestures is enabled.
2. Tap an area three times and then hold and drag your finger across the screen.

Large text
You can enable the Large text option to increase the default size of text displayed on your device.

To enable or disable Large text
1. From your Home screen, tap 📱.
2. Find and tap Settings > Accessibility.
3. Drag the slider next to Large text.

Colour correction
The Colour correction setting adjusts how colours are displayed on the screen for users who are colour blind or have difficulty distinguishing between colours.

To enable Colour correction
1. From your Home screen, tap 📱.
2. Find and tap Settings > Accessibility > Colour correction.
3. Tap the on-off switch.
4. Tap Correction mode, then select the appropriate colour sensitivity.
   ! Colour correction is currently an experimental feature and may affect device performance.

TalkBack
TalkBack is a screen reader service for visually impaired users. TalkBack uses spoken feedback to describe any events or actions performed on your Android device. TalkBack describes the user interface and reads out software errors, notifications and messages.

To enable TalkBack
1. From your Home screen, tap 📱.
2. Find and tap Settings > Accessibility > TalkBack.
3. Tap the on-off switch and then tap OK.
   ! To change speech, feedback and touch preferences for TalkBack, tap Settings.
   ✪ TalkBack launches a tutorial immediately after you enable the feature. To exit the tutorial, tap the Exit button twice.
To disable TalkBack
1 From your Home screen, double-tap 📲.
2 Find and double-tap Settings > Accessibility > TalkBack.
3 Double-tap the on-off switch and then double-tap OK.

TTY (Teletypewriter) mode
The TTY (Teletypewriter) feature on your device allows people who are deaf, hard of hearing, or who have speech or language disabilities, to communicate using a TTY device or a relay service.

To enable TTY mode
1 From your Home screen, tap 📲.
2 Find and tap Settings > Call > Accessibility > TTY mode.
3 Select the applicable TTY mode.
Support and maintenance

Support for your device
Use the Support application in your device to search a User guide, read troubleshooting guides, and find information about software updates and other product-related information.

To access the Support application
1. From your Home screen, tap .
2. Find and tap , then select the required support item.

! Make sure that you have a working Internet connection, preferably over Wi-Fi®, to limit data traffic charges when using the Support application.

Help in menus and applications
Some applications and settings have help available in the options menu, which is normally indicated by in the specific applications.

Help us improve our software
You can enable the sending of usage info from your device so that Sony Mobile can receive anonymous bug reports and statistics that help improve our software. None of the information gathered includes personal data.

To allow the sending of usage info
1. From your Home screen, tap .
2. Find and tap > > Usage info settings.
3. Mark the Send usage info checkbox if it is not already marked.
4. Tap Agree.

Computer tools
There are a number of tools available to help you connect your device to a computer and manage content such as contacts, movies, music and photos.

! This device has a capless USB port. If your device gets exposed to water, ensure the USB port is completely dry before inserting a USB cable.

Xperia™ Companion
Xperia™ Companion is a computer software with a collection of tools and applications you can use when you connect your device to a computer. With Xperia™ Companion, you can:

• Update or repair your device’s software.
• Transfer content from your device using Xperia™ Transfer.
• Back up and restore content on your computer.
• Sync multimedia content – camera content, music and playlists between your device and computer.
• Browse files on your device.

To use Xperia™ Companion, you need an Internet-connected computer running one of the following operating systems:

• Microsoft® Windows® 7 or later
• Mac OS® X 10.8 or later

Media Go™ for Microsoft® Windows®

The Media Go™ application for Windows® computers helps you transfer photos, videos and music between your device and a computer. To read more about how to use the Media Go™ application, go to http://mediago.sony.com/enu/features.

To use the Media Go™ application, you need one of these operating systems:

- Microsoft® Windows® 10
- Microsoft® Windows® 8 / 8.1
- Microsoft® Windows® 7
- Microsoft® Windows Vista®

Updating your device

You should update the software on your device to get the latest functionality, enhancements and bug fixes in order to ensure optimal performance. When a software update is available, 🔄 appears in the status bar. You can also check for new updates manually.

The easiest way to install a software update is to do it wirelessly from your device. However, some updates are not available for wireless download. You then need to use the Xperia™ Companion software on a PC or on an Apple® Mac® computer to update your device.

For more information about software updates, go to www.sonymobile.com/update.

- If you are using a device with multiple users, you must log in as the owner, that is, the primary user, to update the device.

- Insufficient remaining storage capacity may prevent updates. Ensure you have sufficient storage capacity before attempting to update.

To check for new software

1. If you are using a device with multiple users, make sure you are logged in as the owner.
2. From your Home screen, tap 🔄.

- If no new software is available, it’s possible that you may not have enough free memory on your device. If your Xperia™ device has less than 500 MB of free internal memory (device memory) available, you do not receive any information about new software. The following notification appears in the Notification panel to warn of the lack of storage space: Storage space running out. Some system functions may not work. If you receive this notification, you must free up internal memory (device memory) before you can get notifications about new software being available.

To download and install a system update

1. If you are using a device with multiple users, make sure you are logged in as the owner.
2. From your Home screen, tap 🔄.
3. If a system update is available, tap Download to download it to your device.
4. When the download is finished, tap Install and follow the on-screen instructions to complete the installation.

To download and install a system update from the Notification panel

1. If you are using a device with multiple users, make sure you are logged in as the owner.
2. Drag the status bar downwards to open the Notification panel.
3. Scroll down and select the desired system update, then tap Download.
4. When the download is finished, open the Notification panel again if it is closed, then tap Install and follow the on-screen instructions to complete the installation.
Updating your device using a computer

You can download and install software updates on your device using a computer with an Internet connection. You need a USB cable and a PC or an Apple® Mac® computer running the Xperia™ Companion software.

⚠️ If you don’t have the Xperia™ Companion software installed on the relevant computer, connect your device to the computer using a USB cable and follow the on-screen installation instructions.

To update your device using a computer

1. Make sure you have the Xperia™ Companion software installed on your PC or Apple® Mac® computer.
2. Using a USB cable, connect your device to the computer.
3. Computer: Launch the Xperia™ Companion software. After a few moments, the computer detects your device and searches for new software.
4. Computer: If a new software update is detected, a popup window appears. Follow the on-screen instructions to run the relevant software updates.

⚠️ When you connect the device to the computer via a USB cable, you are prompted to install the software, or cancel, unless you have previously selected Do not show again.

Memory and storage

Your device has different types of memory and storage options.

- The eMMC (embedded Multi-Media Controller) memory, which consists of the system memory and the internal storage, is about 32 GB. The system memory is used for the Android™ operating system and for most pre-installed applications. The internal storage is used to store downloaded or transferred content along with personal settings and data. Some examples of data stored to the internal storage are alarm, volume and language settings; emails; bookmarks; calendar events; photos; videos and music.
- You can use a removable memory card with a storage capacity of up to 128 GB to get more storage space. Media files and some apps (with their data) can be moved to this type of memory to free up internal storage. Some apps, for example, the Camera app, can save data directly to a memory card.
- The dynamic memory (RAM) is about 3 GB and cannot be used for storage. RAM is used to handle running applications and the operating system.

⚠️ You may have to purchase a memory card separately.

⚠️ Read more about the use of memory in Android™ devices by downloading the White paper for your device at www.sonymobile.com/support.

Improving memory performance

The memory in your device tends to fill up as a result of normal usage. If the device starts to slow down, or applications suddenly shut down, you should consider the following:

- Always have more than 500 MB of free internal storage available.
- Close down running applications that you are not using.
- Clear the cache memory for all applications.
- Uninstall downloaded applications that you don’t use.
- Move applications to the memory card if the internal storage is full.
- Transfer photos, videos and music from the internal memory to the memory card.
- If your device can’t read content on the memory card, you may need to format the card. Note that all content on the card gets erased when you format it.

⚠️ If you are using a device with multiple users, you must log in as the owner, that is, the primary user, to be able to perform certain actions, such as transferring data to the memory card and formatting the memory card.
To view the memory status
1. From your Home screen, tap 📴.
2. Find and tap Settings > Storage.

To view the amount of free and used RAM
1. From your Home screen, tap 📴.
2. Find and tap Settings > Storage.

To clear the cache memory for all applications
1. From your Home screen, tap 📴.
2. Find and tap Settings > Storage.
3. Tap Internal storage > Cached data > OK.

! When you clear the cache memory, you don't lose any important information or settings.

To transfer media files to the memory card
1. Make sure you have a memory card inserted in your device.
2. From your Home screen, tap 📴.
3. Find and tap Settings > Storage > Transfer data to SD card.
4. Mark the file types that you want to transfer to the memory card.
5. Tap Transfer.

To move apps to the memory card
1. From your Home screen, tap 📴.
2. Find and tap Settings > Apps.
3. Select the app that you want to move, then tap Storage, then under Storage used tap Change > SD Card > Move.

! Some apps cannot be moved to the memory card.

To stop applications and services from running
1. From your Home screen, tap 📴.
2. Find and tap Settings > Apps.
3. Select an application or service, then tap FORCE STOP > OK.

To format the memory card
1. From your Home screen, tap 📴.
2. Find and tap Settings > Storage > Erase SD card.
3. To confirm, tap Erase SD card > Erase everything.

! All content on the memory card gets erased when you format it. Make sure you make backups of all data that you want to save before formatting the memory card. To back up your content, you can copy it to a computer. For more information, see Managing files using a computer on page 138.

Managing files using a computer
Use a USB cable connection between a Windows® computer and your device to transfer and manage your files. Once the two devices are connected, you can drag and drop content between your device and the computer, or between your device's internal storage and SD card, using the computer's file explorer.

If you have a PC or an Apple® Mac® computer, you can use Xperia™ Companion to access the file system of your device.

Backing up and restoring content
Generally, you should not save photos, videos and other personal content solely on the internal memory of your device. If something should happen with the hardware, or if your device is lost or stolen, the data stored on its internal memory is gone forever.
It is recommended to use the Xperia™ Companion software to make backups which save your data safely to a computer, that is, an external device. This method is especially recommended if you are updating your device software to a newer Android version.

Using the Backup & Restore application, you can make a quick online backup of basic settings and data with your Google™ account. You can also use this application to back up data locally, for example, to the SD card in your device or to an external USB storage device.

! It is very important that you remember the password that you set when you make a data backup. If you forget the password, it may not be possible to restore important data such as contacts and messages.

## Backing up data to a computer

Use the Xperia™ Companion software to back up data from your device to a PC or an Apple® Mac® computer. These backup applications let you back up the following types of data:

- Contacts and call logs
- Messages
- Calendar
- Settings
- Media files such as music and videos
- Photos and images

**To back up your data using a computer**

1. Make sure that the Xperia™ Companion software is installed on the PC or Apple® Mac® computer.
2. Connect your device to the computer using a USB cable.
3. Computer: Open the Xperia™ Companion software. After a few moments, the computer detects your device.
4. Select Backup on the main screen.
5. Follow the on-screen instructions to back up data from your device.

**To restore your data using a computer**

1. Make sure that the Xperia™ Companion software is installed on the PC or on the Apple® Mac® computer.
2. Connect your device to the computer using a USB cable.
3. Computer: Open the Xperia™ Companion software.
4. Click Restore.
5. Select a backup file from the backup records, then tap Restore and follow the on-screen instructions to restore data to your device.

## Backing up data with the Xperia™ Backup & restore application

Using the Xperia™ Backup & restore application, you can make an online backup or a local backup of data. For example, you can back up data manually or turn on the automatic backup function to save data periodically.

The Xperia™ Backup & restore application is recommended for backing up data before you do a factory data reset. With this application you can back up the following types of data to an online account, an SD card or to an external USB storage device that you have connected to your device using a USB Host adapter:

- Bookmarks
- Contacts and call log
- Conversations
- Calendar data
- Email accounts
- Wi-Fi® networks
- Device settings
- Applications
• Xperia™ Home layout

To back up content to an online account
1 From your Home screen, tap 📱.
2 Find and tap Settings > Backup & reset.
3 To enable the automatic backup function, tap Automatic backup and then tap the on-off switch.
4 To enable the manual backup function, tap More > Manual backup.
5 Under Where to store files, tap Select storage > Online account.
6 If prompted, tap I agree, then follow the on-screen instructions to sign in to your Google™ account.
7 Select the types of data to back up, then tap OK.

To set up the automatic backup function
1 If you are backing up content to a USB storage device, make sure the storage device is connected to your device using a USB Host adapter. If you are backing up to an SD card, make sure that the SD card is properly inserted into your device. If you are backing up content to an online account, make sure you have signed in to your Google™ account.
2 From your Home screen, tap 📱.
3 Find and tap Settings > Backup & reset.
4 Under Xperia™ Backup & Restore, tap Automatic backup.
5 To enable the automatic backup function, tap the on-off switch.
6 Select a backup frequency, where to save backup files, the time to back up and the types of data to back up.
7 To save your settings, tap <.

To back up content manually
1 If you are backing up content to a USB storage device, make sure the storage device is connected to your device using a USB Host adapter. If you are backing up to an SD card, make sure that the SD card is properly inserted into your device. If you are backing up content to an online account, make sure you have signed in to your Google™ account.
2 From your Home screen, tap 📱.
3 Find and tap Settings > Backup & reset.
4 Under Xperia™ Backup & Restore, tap Automatic backup.
5 Tap Manual backup, then select a backup destination and the data types that you want to back up.
6 Tap Back up.
7 After the data is backed up, tap Finish.

To edit a backup file
1 From your Home screen, tap 📱.
2 Find and tap Backup & Restore.
3 If prompted, tap Back up locally.
4 Tap Edit backup file, then select a backup source and the data types that you want to delete.
5 Tap Delete data.
6 Tap OK to confirm.
7 After the data is deleted, tap Finish.
To restore backed up content

1 If you are restoring content from a USB storage device, make sure the storage device is connected to your device using the USB Host adapter. If you are restoring content from an SD card, make sure the SD card is properly inserted in your device. If you are restoring content from an online account, make sure you have signed in to your Google™ account.
2 From your Home screen, tap 📱.
3 Find and tap Settings > Backup & reset.
4 Under Xperia™ Backup & Restore, tap Restore data, then select a restore source and the data types that you want to restore.
5 Tap Restore data.
6 After the content is restored, tap Finish.

⚠️ Remember that any changes that you make to your data and settings after you create a backup, including any applications you download, get deleted during a restore procedure.

Running diagnostic tests on your device

The Xperia™ Diagnostics application can test a specific function or run a full diagnostic test to check if your Xperia™ device is working properly.

Xperia™ Diagnostics can:
• Assess potential hardware or software issues on your Xperia™ device.
• Analyse how well applications perform on your device.
• Log the number of dropped calls during the previous 10 days.
• Identify installed software and provide useful details about your device.

💡 The Xperia™ Diagnostics application is pre-installed on most Android™ devices from Sony. If the Diagnostics option is not available under Settings > About phone, you can download a light version using the Play Store™ application.

To run a specific diagnostic test
1 From your Home screen, tap 📱.
2 Find and tap Settings > About phone > Diagnostics > Test.
3 Select a test from the list.
4 Follow the instructions and tap Yes or No to confirm if a feature works.

To run all diagnostic tests
1 From your Home screen, tap 📱.
2 Find and tap Settings > About phone > Diagnostics > Test > Run all.
3 Follow the instructions and tap Yes or No to confirm if a feature works.

To view details about your device
1 From your Home screen, tap 📱.
2 Find and tap Settings > About phone > Diagnostics > Facts.

Restarting and resetting your device

You can force your device to restart or shut down in situations where it stops responding or won’t restart normally. No settings or personal data get deleted.

You can also reset your device to its original factory settings. This action is sometimes necessary if your device stops functioning properly, but note that if you want to keep any important data, you have to first back up this data to a memory card or other non-internal memory. For more information, see Backing up and restoring content on page 138.
If your device fails to power on or you want to reset your device's software, you can use Xperia™ Companion to repair your device. For more information on using Xperia™ Companion, see Computer tools on page 135.

⚠ Your device may fail to restart if the battery level is low. Connect your device to a charger and try restarting again.

⚠ If you are sharing a device with multiple users, you may need to log in as the owner, that is, the primary user, to reset your device to its original factory settings.

**To force your device to restart**

1. Press and hold down the power key.
2. In the menu that opens, tap **Restart**. The device restarts automatically.

**To force the device to shut down**

1. Open the cover for the nano SIM card and memory card slot.
2. Using the tip of a pen or a similar object, press and hold down the OFF button for about 10 seconds.
3. After your device emits a series of three quick vibrations, release the OFF button. The device turns off automatically.

⚠ Do not use overly sharp objects that could damage the OFF button.

**To perform a factory data reset**

⚠ Before you start, make sure to back up any important data that is saved on the internal memory of your device to a memory card or other non-internal memory. Factory data reset will erase all data from your device's internal storage, and you will not be able to access the files on any of your encrypted SD cards again.

⚠ To avoid permanent damage to your device, do not restart your device while a reset procedure is underway.

1. From your Home screen, tap .
2. Find and tap **Settings > Backup & reset > Factory data reset**.
3. Tap **Reset phone**.
4. If required, draw your screen unlock pattern or enter your screen unlock password or PIN to continue.
5. To confirm, tap **Erase everything**.

⚠ Your device does not revert to an earlier software version of Android™ when you perform a factory data reset.

⚠ If you forget your screen unlock password, PIN or pattern, you can use the device repair feature in Xperia™ Companion to erase the security layer. You need to provide your Google account login details to perform this operation. By running the repair feature, you reinstall software for your device and you may lose some personal data in the process.

**To repair the device software using Xperia™ Companion**

⚠ Before performing a software repair, make sure you know your Google™ credentials. Depending on your security settings, you may need to enter them in order to start up the device after a software repair.
Make sure that Xperia Companion is installed on your PC or Mac®.

Open the Xperia™ Companion software on the computer and press Software repair on the main screen.

Follow the instructions that appear on the screen to reinstall the software and complete the repair.

Using your device in wet and dusty conditions

Your device is waterproof and protected against dust, so don’t worry if you get caught in the rain or want to wash off dirt under a tap, but remember: all ports and attached covers should be firmly closed. You should not: put the device completely underwater; or expose it to seawater, salt water, chlorinated water or liquids such as drinks. Abuse and improper use of device will invalidate warranty. The device has Ingress Protection rating IP65/68. For more info see www.sonymobile.com/waterproof.

Your device has a capless USB port. The USB port must be completely dry before a cable can be connected for charging or data transfer, for example. If your device gets exposed to water and the USB port gets wet, wipe the device dry with a microfibre cloth and shake it several times with the USB port facing downwards. Repeat the procedure until no moisture is visible in the USB port.

Your warranty does not cover damage or defects caused by abuse or use of your device against Sony Mobile’s instructions. For more information about the warranty, refer to the Important information, which can be accessed via support.sonymobile.com or via Settings > About phone > Legal information.

Warranty, SAR and usage guidelines

For information about warranty, SAR (Specific Absorption Rate) and safety guidelines, please read the Important information provided under Settings > About phone > Legal information on your device.

Recycling your device

Got an old device lying around the house? Why not recycle it? By doing so, you will help us reuse its materials and components, and you’ll protect the environment, too! Find out more about the recycling options in your region at www.sonymobile.com/recycle.

Limitations to services and features

Some of the services and features described in this User guide are not supported in all countries/regions or by all networks and/or service providers in all areas. Without limitation, this applies to the GSM International Emergency Number, 112. Please contact your network operator or service provider to determine availability of any specific service or feature and whether additional access or usage fees apply.

Use of certain features and applications described in this guide may require access to the Internet. You may incur data connection charges when you connect to the Internet from your device. Contact your wireless service provider for more information.
