Chapter 1:

Introduction

Welcome to CyberLink Media Suite, the all-in-one multimedia suite that opens up the world of digital entertainment on your PC.

Note: this document is for reference and informational use only. Its content and the corresponding program are subject to change without notice.

Using CyberLink Media Suite you can perform the following functions, and more:

- play discs, movie files, disc folders, video files, and music with the world's #1 playback software on the PC.
- burn music or data discs in a variety of formats.
- perform advanced editing on videos with a powerful editing tool that provides unlimited move-making possibilities.
- convert photos, videos, and audio to other media formats and transfer them to portable devices.
- apply easy edits and enhancements to both your photos and videos.
- make advanced adjustments on photos manually or by applying adjustment presets.
- author Blu-ray Disc*, AVCHD*, and DVD discs with motion menus.
- organize your photos with features such as face tagging, or use them to create dazzling slideshows and photo gallery discs.
- record, trim, cut, and add effects to your audio files that you want to use in your video editing or share with friends.
- share your photos on Flickr and Facebook, and upload your videos to YouTube or Facebook.
- back up and restore your data.
- create and print disc labels.
- erase and copy discs, or duplicate a movie disc.
- extract files from or mount a disc image, or burn it to a disc.

Note: * available in CyberLink Media Suite Ultra only.
CyberLink Media Suite Programs

You access all the CyberLink Media Suite programs through the CyberLink PowerStarter interface. It provides easy access to all of the CyberLink software on your PC, for whatever task you have at hand. From managing your media files and creating movies, to organizing your disc content, burning discs and much more.

The PowerStarter Program

CyberLink PowerStarter is the complete portal for all of your CyberLink software.

Menu Icons

CyberLink PowerStarter helps you work with your media using a task-based approach, launch your CyberLink software programs all from one convenient location, or easily upgrade/update any of these programs.
Menu Icons

Clicking a menu icon reveals a list of features and functions you can choose from, and provides instant and direct access to all of your CyberLink programs.

Click the menu icon that corresponds to the type of media you want to access or features you want to explore.

Movie

From the Movie menu you can watch movies on a disc or play back videos files on your hard drive. You can also use the advisor tool to check the Blu-ray and 3D compatibility of your current system, or view movie information on MoovieLive.com.

Video

In the Video menu you can capture and import videos from a variety of sources, and then edit them into creative movie productions. You can then author discs with professional looking menus, or share your videos with the world by uploading them to the Internet.

Photo

The Photo menu contains a variety of functions for importing, managing, fixing, and touching up your photos. Features also include the creation of slideshows, the authoring of photo discs, and the sharing and printing of your photos.

Music

Within Music you can play back your music or burn it to a disc in a variety of formats. You can also rip the music from an audio disc to your hard drive, and edit and enhance your digital audio files with rich effects.

Data & Backup

Access the Data & Backup menu to burn data files to a variety of different disc
types. You can also copy your data and movie discs, or back up all of the important data on your computer and then restore it when required.

Utilities

Use the Utilities menu to manage your discs by creating, burning or extracting files from disc images. You can also erase rewritable discs, edit some video discs, burn DVD folders to disc, or design and print disc labels.

Function Items

Select one of the menu items to reveal all the available functions and tasks you can perform using your CyberLink software. Select any of the functions to open the corresponding software program and complete the specified task, or access the requested feature.

Quick Access Buttons

CyberLink PowerStarter includes the following buttons that provide quick access to the Favorites, CyberLink Products, About, and Preferences windows.

Favorites

You can add the functions and programs you use most often into the Favorites menu, so you can quickly and easily access them when required. Click the
button to view the Favorites menu.

By default, this window is empty, but you can add a function or program to the Favorites menu by doing this:

1. Click the menu icon to display the function/program you want to add to your favorites.

2. Hover your mouse over the function/program and then click 🌟.

   **Note:** if you would like to remove a function/program from your favorites, just deselect the highlighted star next to the function in the menu.

---

**CyberLink Products**

To view a list of the CyberLink programs installed on your computer, click 🌟. You can then select any of the program names to open the corresponding software.

   **Note:** the specific programs available in CyberLink PowerStarter are dependent on the products installed on your computer and the versions you purchased.

---

**About**

Click 📔 to display CyberLink PowerStarter version information.

---

**Preferences**

To configure the behavior of the CyberLink PowerStarter program, click the button, and then set your desired preferences.

- **Return to CyberLink Media Suite after you close a program:** select this option to return to the CyberLink Media Suite (PowerStarter) main window after you close a program you accessed through the program portal.

- **Automatically check for the latest version:** select this option if you want CyberLink PowerStarter to automatically check for newer versions of the
installed software programs every 14 days. When new versions are available, the corresponding Update and Upgrade buttons in the Upgrade window are enabled.

- **Receive CyberLink product information**: allows you to enable/disable banner and running text in the About window.

- **Display language**: select the *Use system default language* option to use the same language as your current operating system language, or select the other option and manually select the UI language from the drop down list that you want to use.

  **Note**: CyberLink PowerStarter will default to English if your operating system's language is not supported by the program.

## Upgrading/Updating CyberLink Software

Select the button to access the Upgrade/Update window, where you can view product version information for the CyberLink programs currently installed on your computer. They are listed in a table, along with the current version number, and buttons indicating whether or not there is a free update or an upgrade for the software available.

- When enabled, click on in the Update column to open a page that lets you download the latest patch update for the corresponding software.

- You may also click on in the Upgrade column to open a page that allows you to upgrade a specific product, when available.
System Requirements

The system requirements listed below are recommended as minimums for working with the programs. You may find that your system, while meeting these recommended minimums, requires expanded capacity for some tasks.

<table>
<thead>
<tr>
<th>Minimum System Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Operating System</strong></td>

Chapter 2:

Movie

CyberLink Media Suite provides access to CyberLink PowerDVD, a software disc player with all the features and controls of a normal living room disc player. It offers feature-rich navigation controls for an interactive and tailored viewing experience.

\textbf{Note:} for a detailed description of all the playback features available in CyberLink PowerDVD, press the F1 key on your keyboard when within the program window to open the help file.

CyberLink PowerDVD also provides access to all the movie information you will need from the Internet.

\section*{Play a Movie Disc}

In CyberLink Media Suite you can play all of your movie discs with the world's #1 playback software on the PC, CyberLink PowerDVD. To start watching a movie disc, select the \textbf{Play a Movie Disc} function within the \textbf{Movie} menu of CyberLink PowerStarter.

Insert a movie disc into your disc drive, and CyberLink PowerDVD will play it automatically. If there is a disc already in your disc drive when you opened CyberLink PowerDVD, do this:

\begin{enumerate}
\item Click on \textbf{Movies} and then \textbf{BD/DVD Movie} in the media library.
\item Click the play button.
\end{enumerate}

\section*{Supported Disc Formats}

The optical disc formats that CyberLink PowerDVD supports are listed below:

<table>
<thead>
<tr>
<th>Optical Disc Types</th>
<th>File Formats</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blu-ray Discs*/Blu-ray 3D** Discs</td>
<td>BDAV, BDMV</td>
</tr>
<tr>
<td>DVD</td>
<td>DVD-Video, AVCHD*, AVCREC*, DVD-VR, DVD+VR</td>
</tr>
<tr>
<td>CD</td>
<td>VCD, SVCD</td>
</tr>
</tbody>
</table>
**Note:** * this feature is not available in some versions of CyberLink PowerDVD. ** If your version of CyberLink PowerDVD supports Blu-ray 3D playback, you may have to enable playback in More Blu-ray Disc Settings.

## Movie Disc Playback Controls

When playing back a movie disc in the **BD/DVD Movies** section of the Media Library tab, the playback controls display as follows:

**Note:** the below table includes the hotkey for each specific button on the playback controls, if available. For a complete list of all the hotkeys in PowerDVD and the corresponding behavior, see the hotkey table in the program's help file.

<table>
<thead>
<tr>

Playback Features

The following are some playback features that are sure to enhance your movie viewing experience:

- TrueTheater Video Enhancements and Hardware Decoding
- 3D Playback
- Play Speed Navigator

TrueTheater Video Enhancements and Hardware Decoding

During the playback of DVDs, video files, and videos on YouTube, you can enable TrueTheater video enhancements to maximize the video playback quality. In this window you can also enable hardware acceleration or software decoding for smoother playback.

Note: CyberLink PowerDVD cannot apply certain TrueTheater video effects to some video file formats.
Enabling Hardware/Software Decoding and TrueTheater Enhancements

At the top of the Videos tab of the TrueTheater Enhancements window, you can enable hardware or software decoding for smoother video playback. Or you can enable both software decoding and TrueTheater video enhancements.

- **Enable hardware acceleration decoding whenever possible**: if your computer supports NVIDIA CUDA/AMD Accelerated Parallel Processing technology, select this option to use GPU acceleration to decode the video for smoother movie playback. When selected, the TrueTheater Effects are disabled.

- **Use software decoding**: select this option to use CyberLink's built-in software decoding codec. Select this option if your computer does not support hardware acceleration, but you still want to decode the video for smoother movie playback. When selected, the TrueTheater Effects are disabled.

- **Use software decoding with TrueTheater enhancements**: select this option if you want to use CyberLink's built-in codec to decode the video for smoother movie playback, and enable also the TrueTheater enhancements. Once enabled, modify the enhancements as required below.

Modifying TrueTheater Video Enhancement Settings

- **Auto adjustment**: select this option to apply all TrueTheater enhancements automatically when playing DVDs and videos. CyberLink PowerDVD dynamically adjusts (turns on or off) TrueTheater HD and Motion according to the CPU usage and mobile power settings (notebook/laptop users only).

- **Manual adjustment**: select this option to manually enable and set the amount of TrueTheater enhancements applied to the video as follows:
  
  - **TrueTheater HD**: select this option to upscale the original video to a higher resolution version, which is sharper and artifact-free. TrueTheater HD is capable of boosting 480p video to 1080p. Use the slider to adjust the sharpness to the best output that suits your configuration.

  - **TrueTheater Lighting (CyberLink Eagle Vision 2)**: is a video enhancement technology developed by CyberLink that detects video content and dynamically adjusts the brightness/contrast/saturation ratios so that you do not need to change the color settings if the video you are watching
contains scenes that are overly dark or too bright. Use the level slider to adjust the TrueTheater Lighting effect the desired amount.

- **TrueTheater Motion**: select this option to enable frame rate upsampling, from 24 fps up to 60 fps, to make panning scenes, particularly in action movies, play more smoothly. TrueTheater Motion can improve the frame rate of video content to 60 or 72 fps, depending on the output frame rate of your display.

- **TrueTheater Noise Reduction**: select this option to reduce the amount of video noise when playing home video files in CyberLink PowerDVD, including High-ISO and TV signal noise. Once enabled, drag the slider to increase or decrease the level of noise reduction on the video.

  *Note: this feature is not available for disc playback.*

- **TrueTheater Stabilizer**: select this option to employ motion compensation technology when playing home video files that are shaky. This feature is ideal for use with video files taken without a tripod or recorded while moving.

  *Note: this feature is not available for disc playback.*

### TrueTheater Display Mode

The TrueTheater display mode option is available when you enable TrueTheater enhancements, and lets you select how the video enhancements are displayed during playback.

You can select from the following display modes:

- **Normal Mode**: select to view the applied TrueTheater enhancements on the entire video in normal mode.

- **Split Mode**: select to compare the applied TrueTheater enhancements in split mode, with the left half of the video played back with the original video, while the right half has the video enhancements applied.

- **Compare Mode**: select to preview the applied TrueTheater enhancements on the entire video using compare mode, with the left side containing the original video, while the right side contains the same video with the video enhancements applied.
3D Playback

CyberLink PowerDVD supports the playback of 3D* Blu-ray Discs*, DVDs, video files, and 3D YouTube videos, and also lets you view JPS, MPO, and side by side 3D photos in 3D. CyberLink PowerDVD can also convert any regular 2D Blu-ray Disc**, DVD movie, video file, YouTube video, and photo into 3D using TrueTheater 3D*.

3D Playback Warning: if you experience headaches, dizziness, nausea, blurry eyesight or other symptoms while watching 3D video content, it is highly recommended that you stop playback immediately and see your doctor.

Note: * this feature is not available in some versions of CyberLink PowerDVD.

Enabling 3D Playback

When you insert a 3D** Blu-ray Disc or DVD, or play a 3D video file, CyberLink PowerDVD plays it back automatically in 3D if 3D mode is enabled.

Note: ** if your version of CyberLink PowerDVD supports 3D Blu-ray Disc playback, you may have to enable playback in settings.

CyberLink PowerDVD also automatically converts all 2D Blu-ray Discs, DVDs, video files, and YouTube videos to 3D using TrueTheater 3D once 3D mode is enabled.

Note: you must manually enable 3D playback when viewing 3D photos or if you want to convert 2D photos to 3D.

To enable 3D playback, just select the button on the playback controls.

Note: 3D mode is enabled when the 3D icon on the playback controls displays as . Note that a number of features are disabled during 3D playback.

If you need to adjust your 3D display configuration or the playback preferences, click on the playback controls and then select 3D Display.

Play Speed Navigator

When wanting to rewind or fast forward through content on movie discs, in movie files, or when playing videos files, you can click the or button to access the Play Speed Navigator for easier control.
Drag the blue control slider left to increase the rewind speed up to 16 times the normal playback speed, or right to increase the forward speed up to 32 times. You can also click \[\text{\textless}8\text{\textgreater}\] to quickly jump back 8 seconds, or \[\text{\textless}30\text{\longrightarrow}\] to skip forward 30 seconds.

Press the space bar on your keyboard to close the control panel and resume normal playback.

**Browse and Play Movies in Movie Library**

Select the **Browse and Play Movies in Movie Library** function within the **Movie** menu of CyberLink PowerStarter to launch CyberLink PowerDVD.

In the **Movie Library** you can browse through and play the movie files in your personal movie library. Movies files are DVD/Blu-ray Disc* folders and individual video files (movie files or TV show files you recorded with a PVR) that are saved on your computer's hard drive.
Browsing Through Movies in the Movie Library

When browsing through the movie files in the Movie Library section of the media library, you can view their movie cover art, rating information, and more. Click the down arrow in the top right of the window to filter the movies by **10 Recently Played Movies** or **Movies Not Watched Yet** if required.

Note: use the zoom slider on the playback controls to use Instant Scale to dynamically resize the movie cover art to a desired size.

If a movie file is not displaying the cover art, right click on the movie file and then select **Set Cover Art**. In the Select Image dialog, browse to and then select an image on your computer's hard drive to use as the cover art.

Note: if the cover art for a movie file in the movie library is incorrect, you can right click on it and select **Hide Online Info** to remove it and the related movie information.

Right-click on a movie file thumbnail in the media window and then select **Locate on Disk** to view the folder where the file is located in Windows Explorer. If you'd like to remove a movie file from the media library (but not from your computer's hard drive), just right click on it and select **Remove from Library**.

Supported Movie File Formats

In CyberLink PowerDVD you can play back movie files in the following formats:

**Movie file formats**: 264, 26L, 3G2, 3GP, 3GP2, 3GPP, ASF, AVC, AVI, BSF, DAT, DIV, DIVX*, DVR-MS, FLV, H264, JSV, JVT, M1V, M2P, M2T, M2TS, M2V, M4V, MK3D*, MKV, MOD, MOV, MP4, MP4V, MPE, MPEG, MPG, MPV, MTS, MVC, QT, TIVO, TOD, TP, TPD, TRP, TS, TTS, VC1, VOB, VRO, WM, WMV, WTV.

Note: * this feature is not available in some versions of CyberLink PowerDVD.

Playing Movie Files in PowerDVD

To play a movie file in your media library, select **Movies** in the media panel, and then **Movie Library**. Just double-click on a movie file to begin playback.

Note: see **Video Playback Controls** for a list and description of the controls and playback features available during movie file playback.
Play a Movie Folder

You can play back any DVD and unprotected Blu-ray Disc* folders that are on your hard drive. To do this, select the **Play a Movie Folder** function within the **Movie** menu to open CyberLink PowerDVD. Next, do the following:

<table>
<thead>
<tr>
<th>Note:</th>
<th>* this feature is not available in some versions of CyberLink PowerDVD.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Browse to and then select the folder on your computer’s hard drive that you want to play back.</td>
</tr>
<tr>
<td>2.</td>
<td>Click <strong>OK</strong> to begin playback.</td>
</tr>
</tbody>
</table>

View Online Movie Info

If you’d like to browse through the latest movie information available on the Internet, select the **View Online Movie Info** option in the **Movie** menu of CyberLink PowerStarter to launch CyberLink PowerDVD.

The **Movie Info** section of the media library provides you with information about the latest movie releases, lets you know what are the top rated movies, and which are the most watched by CyberLink PowerDVD users. You can also read movie reviews, watch movie trailers, read bios on your favorite actors, and much more.
Chapter 3:

Video

The video functions in CyberLink Media Suite let you perform a variety of tasks, including editing your videos in CyberLink PowerDirector, producing movie discs with CyberLink PowerProducer, and much more.

You can also convert videos to other formats with CyberLink MediaEspresso, or use CyberLink MediaShow to organize, enhance, and share your videos.

Note: for a more detailed description of these programs and their functions, please consult the product help files.

Play Video Files

To play back video files in CyberLink PowerDVD, select the Play Video Files function within the Video menu of CyberLink PowerStarter. The CyberLink PowerDVD main window displays.

Note: for a detailed description of all the playback features available in CyberLink PowerDVD, press the F1 key on your keyboard when within the program window to open the help file.

You can play back video files by doing any of the following:

- drag and drop a video file directly onto the CyberLink PowerDVD user interface.

- to play a video file in your media library, select Videos in the media panel, and then browse to the folder that contains your videos. Double-click on a video file to begin playback.

- to play a video file on your hard drive, click the My Computer tab in the media panel, and then browse to the folder that contains your video file. Double-click on a video file to begin playback.

- if CyberLink PowerDVD is set as the default player for a video file on your computer, you can also just double-click on a file in Windows Explorer to play it back.

Note: for a list of the available playback controls, see Video Playback Controls. For information on some of the playback features that are available during video file playback, see Playback Features.
Supported Video File Formats

In CyberLink PowerDVD you can play back videos in the following file formats:

**Video formats:** 264, 26L, 3G2, 3GP, 3GP2, 3GPP, ASF, AVC, AVI, BSF, DAT, DIV, DIVX*, DVR-MS, FLV, H264, JSV, JVT, M1V, M2P, M2T, M2TS, M2V, M4V, MK3D*, MKV, MOD, MOV, MP4, MP4V, MPE, MPEG, MPG, MPV, MTS, MVC, QT, TIVO, TOD, TP, TPD, TRP, TS, TTS, VC1, VOB, VRO, WM, WMV, WTV.

*Note:* *this feature is not available in some versions of CyberLink PowerDVD.*

Video Playback Controls

When playing back a video file in the **Videos** section of the Media Library tab, or a movie file in the Movie Library section, the playback controls display as follows:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Button</th>
<th>Hotkey</th>
<th>Description</th>

## Advanced Video Editing

Use CyberLink PowerDirector to edit all of your video files into professional-looking movie masterpieces.

To edit your videos in CyberLink PowerDirector, do this:

1. Select the **Advanced Video Editing** function within the **Video** menu of CyberLink PowerStarter.

2. If required, select the **Full Feature Editor** option to open CyberLink PowerDirector to the edit window.

3. Click ![1] and then select one of the following options:

<table>
<thead>
<tr>
<th></th>

</tr>
</tbody>
</table>

### Note: * this feature is not available in some versions of CyberLink PowerDVD.*
• **Import Media Files**: import media files individually.

• **Import a Media Folder**: import the entire contents of a folder that contains the media files you want to use in your current project.

  _Note_: you can also drag and drop media onto the CyberLink PowerDirector window to import it into the program.

4. Proceed to edit your movie. If required, you can download additional media from Flickr and Freesound to include in your video production, and custom effects and titles from DirectorZone.

  _Note_: for a detailed description on how to edit videos in CyberLink PowerDirector, press the F1 key on your keyboard when within the Edit window to open the help file.

---

**Organize Videos**

You can import all of your videos into the CyberLink MediaShow library, and use the program to organize them and prepare them for editing, burning, uploading to the Internet, and more.

To organize your videos using CyberLink MediaShow, select the **Organize Videos** function within the **Video** menu of CyberLink PowerStarter. The CyberLink MediaShow main window displays.

**Managing Video Files**

When you are viewing the video thumbnails in the media library, there are several management options available. Double click on a folder/tag/album etc. in the media library to display all of the videos inside.

**Adding and Editing Tags**

You can add keyword search tags to your videos in the media library. Tags help you find specific videos in the library more quickly and are useful when uploading content to YouTube, as people use keyword tags to find media they are interested in.

**Adding Tags**

To add keyword tags to a video file in the library, just right-click on the file and then
select **Add Tag**. You can also select some videos files or a media album in the library and then **Edit > Tag** at the top of the media window. In the pop-up menu that displays, select the keyword tags you want to add.

You can also add new keyword tags.

### Adding New Tags

If you want to add a new keyword tag to the library so that it is available in the pop-up menu, do this:

**Note:** you can quickly add keyword tags to some video files, or entire media albums, simply by dragging and dropping them on to the **Tags** section of the library side bar.

1. Right-click on a video file in the library and then select **Add Tag**.
2. Enter the new tag name in the field provided in the Add Tag window, and then click on ![tag](image)
3. Select **Done**. The tag will be added and applied to the selected video file.

### Creating and Managing Albums

You can create new albums or place your videos into existing ones, helping you organize your videos and prepare it for slideshows, movie discs, and more.

### Adding Videos to Albums

You can organize your videos into albums, which are then easier to use in slideshows, movie projects, etc. To add videos to an album, just right-click on the file and then select **Add to Album**. In the pop-up menu that displays, select one of the following albums:

- **Favorite Media**: select to add the video file to your favorite media album. You can also add videos to this album at any time by selecting the ![favorite](image) button when playing back media.

- **Create New Album**: select to create a new album in the media library and add the selected videos to it.

- **Custom Albums**: any custom albums you create are in this pop-up menu. Just select to add the video to the album.
Repeat the above process to add as many videos to an album as you wish.

**Creating New Albums**

If you want to add a new album to the media library, do this:

1. Select **Create New Album** in the Albums section, or right-click on a video file in the library, select **Add to Album > Create New Album**.

2. In the Album Information window, enter the information as follows:
   - **Name**: enter the album name.
   - **Date**: enter a date for the album, which can be either the date the media was shot or the date the album was created.
   - **Location taken**: if required, enter the location where the media was shot.
   - **Description**: add a description for the album, if required.

3. Select **OK**. The custom album is saved to the media library.

**Easy Video Editing**

CyberLink MediaShow offers several editing features, including trimming unwanted portions from video clips, or performing various touch ups on videos in preparation for editing, uploading, etc.

*Note*: the edits you make to a video file is not applied to the original source clip. CyberLink MediaShow keeps a log of your desired changes and then asks you to produce a new video file version when you are done editing.

To fix and enhance your videos, do this:

*Note*: you can easily undo any edits that you make to a video by right-clicking on it in the media window and selecting **Undo Changes**. You can also click ![edit log icon] to use the **Edit Video - Log** to roll back changes to a specific version.

1. Select the **Easy Video Editing** function within the **Video** menu of CyberLink PowerStarter. The CyberLink MediaShow main window displays.

2. Select all of the videos in the media library that you want to edit, and then drag and drop them in the media tray.

3. Select the **Edit** button, and then select **Edit Media**. The Edit window opens.
Once you are done editing videos, select the **Preview** button to play them back, or **Save** if save them as new video files. Select the **Share** button to send them to friends and family, or post them on a social media website. See [Upload to Social Networks](#) for more information.

# Making Video Fixes

CyberLink MediaShow provides you with several common video fixes, including auto lighting adjustments, fixing shaky video, and reducing unwanted video and audio noise.

In the Edit window, select on the **tab** to perform the following fixes on your videos.

- **Fix shaky video**: select to automatically fix a video clip that contains moments where the camera is shaking.
- **Auto fix lighting**: select to automatically fix the lighting in the video.
- **Reduce video noise**: select to remove blocky artifacts from a video clip’s image.
- **Reduce audio noise**: use this option to filter out background noises from the audio track. Drag the slider to remove more or less noise.

Select **Close** to save the changes to your video, and then **Back** to produce and export the video as a new file.

# Fine Tuning Videos

Use the fine tune function in the Edit window to manually adjust the **Brightness**, **Contrast**, **Saturation**, or **White balance** of videos. Select the **tab** to use the sliders to adjust the video’s properties as required.

Select **Close** to save the changes to your video, and then **Back** to produce and export the video as a new file.
Trimming Videos

Select the Trim button in the Edit window if you want to trim out some portions from a video clip. Follow the steps on the user interface to mark the portions of the video clip that you want to keep or remove.

Select Apply to trim the video clip, and then Back to produce and export the video as a new file.

Upload to Social Networks

You can share all of your videos with your friends and family by uploading them directly from the CyberLink MediaShow library to YouTube and Facebook.

To upload videos to a social network, select the Upload to Social Networks function within the Video menu of CyberLink PowerStarter. The CyberLink MediaShow main window displays.

Uploading Videos to YouTube

You can upload videos from the library directly to the YouTube video sharing web service.

To upload a video to YouTube, do this:

1. Select all of the videos in the media library that you want to upload to YouTube, and then drag and drop them in the media tray.

2. Select the Share tab and then the YouTube button. The Upload to YouTube wizard displays.

3. Follow the detailed instructions in the wizard to upload your video.

   Note: if you do not have a YouTube account, select the Sign up to YouTube link to register.

4. Select the Done button once your videos are uploaded.
Uploading Videos to Facebook

You can upload videos from the library directly to your Facebook page.

To upload videos to Facebook, do this:

1. Select all of the videos in the media library that you want to upload to Facebook, and then drag and drop them in the media tray.
2. Select the Share tab and then the Facebook button. The Upload to Facebook wizard displays.
3. Follow the detailed instructions in the wizard to upload your videos.

   Note: if you do not have a Facebook account, select the Sign up to Facebook link to register.
4. Select the Done button once your videos are uploaded.

Convert Videos

With CyberLink MediaEspresso you can convert videos into formats compatible with a variety of portable devices, game consoles, and more.

To convert videos, do this:

1. In the Video menu of CyberLink PowerStarter, select Convert Videos. The CyberLink MediaEspresso program opens.
2. Click on the Import Media button and then select By File to import individual videos files, or select By Folder to import all the videos in a specific folder.
3. Browse to and select all of the video files you want to import and convert, and then click on the Open button.
4. Next, choose whether you want to convert the videos for use on a Mobile Phone, Media Player, or Game Console.

   Note: you can choose the Convert button to convert media using a custom profile you create. For a detailed description of this feature, press the F1 key on your keyboard to view the MediaEspresso help file.
5. To convert video files, select:
a preset media format profile from the Video drop-down menu. The profiles that are available is dependent on the device model you select.

- **Smart Fit** if you want CyberLink MediaEspresso to automatically select the best format and resolution for you based on the source video.

- **More...** if you want to use another available profile. Set the video's format, aspect ratio, and audio format using the profile options available. The formats and options that are available is dependent on the device model you select.

6. If required, click on  to select a different output folder for the converted media.

7. If your computer supports Intel CPU or ATI/NVIDIA GPGPU hardware acceleration, in the Settings section click the button to **Enable hardware encoding** and/or **Enable hardware decoding** to reduce the time it takes to convert your media.

8. If the device you are converting the files for is connected, select the **Transfer to connected device after conversion** option if you want CyberLink MediaEspresso to transfer the files after conversion.

9. Click OK to start the conversion.

---

**Create a Movie Disc**

You can take the video files on your computer and produce a movie disc in the CD, DVD or Blu-ray Disc* format, complete with stylish menus, in just a few simple steps. In CyberLink PowerProducer you can also author and burn 3D* Blu-ray, AVCHD*, and DVD discs.

---

**Note:** * available in CyberLink Media Suite Ultra only.

To produce a movie disc in CyberLink PowerProducer, do this:

1. Select the **Create a Movie Disc** function and then the format of the disc you want to create within the Video menu of CyberLink PowerStarter. The CyberLink PowerProducer select media window displays.

   **Note:** for a detailed description on how to customize your disc in CyberLink PowerProducer, press the F1 key on your keyboard when within the program window to open its help file.

2. Select your disc's video format. See the **Selecting Your Media** section of the CyberLink PowerProducer help file for more information.
3. Next, capture video or import existing video files into the program. See the Importing Media into PowerProducer section of the CyberLink PowerProducer help file for more information.

4. Select and customize a disc menu for your movie disc. See the Customizing Disc Menus section of the CyberLink PowerProducer help file for more information.

5. Finalize your disc by previewing your movie and then burning it to the disc. See the Finalizing Your Disc section of the CyberLink PowerProducer help file for more information.

**Edit a Movie Disc**

If you burned video onto a rewritable disc in the +VR, -VR or BDAV format, you can go back and edit the content at a later time in CyberLink PowerProducer.

To edit a disc after burning, do this:

1. Select the **Edit a Movie Disc** function within the **Video** menu of CyberLink PowerStarter. The CyberLink PowerProducer edit disc window displays.

2. In the Confirm Disc to be Edited window, insert your target disc, select a maximum recording speed, and then click **Next**.

3. Make any of the required modifications in the CyberLink PowerProducer program as follows:
   - To import more media, see Importing Media into PowerProducer section of the CyberLink PowerProducer help file.
   - To edit clips or slideshows, see Editing Media Clips section of the CyberLink PowerProducer help file.
   - To edit slideshows, see Editing Photo Slideshows section of the CyberLink PowerProducer help file.
   - To modify the disc menu, see Customizing Disc Menus section of the CyberLink PowerProducer help file.

4. When you are done your edits click **Next**.

5. Click **Burn** to re-burn your disc with the edits applied.
Chapter 4:

Photo

The photo functions in CyberLink Media Suite let you organize, enhance, and share all of your photos using CyberLink MediaShow.

With CyberLink Media Suite you can also turn your photos into dazzling slideshows and photo gallery discs, print them out in a variety of formats, create slideshow DVDs, share them on social networks, and much more.

Note: for a more detailed description of these programs and their functions, please consult the product help files.

Play Back 2D Photos in 3D Mode

In CyberLink MediaShow you can convert any 2D photos in the media library into 3D photos.

To convert photos to 3D, do this:

1. Select the Play Back 2D Photos in 3D Mode function within the Photo menu of CyberLink PowerStarter. The CyberLink MediaShow main window displays.

2. Select all of the photos in the media library that you want to convert to 3D, and then drag and drop them in the media tray.

3. Select the Create button and then 2D to 3D Photo.

4. In the Create 3D Photo window, set the following options:

   - **Name**: enter a name for the newly created 3D photos.
   - **Type**: select the format of 3D photo file. Currently only the MPO format is available.
   - if required, select the button to specify the folder on your computer’s hard drive where you want to save the converted photos.
   - select what you are using the converted photos for, i.e. for viewing or printing.

5. Select OK to convert the 2D photos to 3D.
Import and Organize Photos

In the Photo feature of CyberLink Media Suite, you can import all of the photos on your computer into CyberLink MediaShow. Once in the program, you can use CyberLink MediaShow's photo features to organize them in albums, add keyword search tags, tag people's faces, and much more.

To import and organize your photos using CyberLink MediaShow, select the **Import and Organize Photos** function within the **Photo** menu of CyberLink PowerStarter. The CyberLink MediaShow main window displays.

Importing Photos

You can easily import all of the photos on your computer, optical discs, and removable devices into the CyberLink MediaShow program.

Supported Formats

CyberLink MediaShow supports the following photo file formats:

**Photos**: BMP, JPG, and PNG.

**RAW photo formats**: CyberLink MediaShow also supports the import of most camera RAW photo formats.

**3D photo formats**: MPO.

Importing Photos from Your Computer

To import the photos in folders on your computer, do this:

> **Note**: you can also just drag and drop photos onto the CyberLink MediaShow window to import them into the program.

1. In the CyberLink MediaShow window, click the button in the media library.

2. Click the button to add a folder to the media library. CyberLink MediaShow scans the folders in the list every time the program is launched and automatically loads any new photos into the library.
Photo

---

**Note:** if you want to remove a folder from the scanned folders list, select it and then select 🗑.

3. Click **OK** to save your changes. CyberLink MediaShow will import all the support photo formats that are in the folders you added to the scanned folder list.

---

## Importing from Optical/Portable Device

In CyberLink MediaShow, you can import photos from an optical device (CD, DVD, Blu-ray Disc drive) or from portable removable devices such as mobile phones, USB removable hard drives, memory sticks, and more.

To import from an optical/portable device, do this:

1. Ensure the device is connected (and turned on if necessary) to your computer, and then select the **Import** button.
2. Select the device you want to import from in the list (optical drive, camera, mobile phone, etc.).
3. In the Import window the content on the disc, device, portable hard drive, etc. displays. By default, CyberLink MediaShow selects each media thumbnail for import. Deselect any of the photos that you don’t want to import into the library.
4. At the bottom of the Import window, set the following:
   - **Path**: set the location on your computer’s hard drive where the photos are stored.
   - **Folder name**: enter a name for the new media folder that is added during the import process.
   - **Exclude duplicates**: select to have CyberLink MediaShow ignore photos that were previously imported into the library.
   - **Delete files from source device/card after import**: select this option if you want CyberLink MediaShow to remove the photos from the portable device after importing them.
5. Select **Import Selected** to import all the selected photos into the library and into the specified folder on your computer.
Organizing Photos

When you are viewing the photo thumbnails in the media library, there are several management options available. Double click on a folder/tag/album etc. in the media library to display all of the photos inside.

Adding and Editing Tags

You can add keyword search tags to your photos in the media library. Tags help you find specific photos in the library more quickly and are useful when uploading content to Flickr, as people use keyword tags to find media they are interested in.

Adding Tags

To add keyword tags to a photo in the library, just right-click on the file and then select Add Tag. You can also select some photos or a media album in the library and then Edit > Tag at the top of the media window. In the pop-up menu that displays, select the keyword tags you want to add.

You can also add new keyword tags.

Adding New Tags

If you want to add a new keyword tag to the library so that it is available in the pop-up menu, do this:

1. Right-click on a photo in the library and then select Add Tag.
2. Enter the new tag name in the field provided in the Add Tag window, and then click on +.
3. Select Done. The tag will be added and applied to the selected photo.

Tagging Faces

You can manually tag the faces in your photos in the media library, or have CyberLink MediaShow auto detect and tag the faces for you. Once the faces are
tagged, the photos are then categorized in the Faces section of the media library, and included on Facebook if you choose to share them on the social media website.

**Auto Tagging Faces**

CyberLink MediaShow uses face recognition to auto detect and tag faces in your photos. To have CyberLink MediaShow auto scan a group of photos for faces, do this:

1. **Select the Faces section in the media library side bar.**

2. **Select the Tag Faces button.**

   - **Tag faces in all photos**: select to scan and tag faces in all of the photos in the media library. Select the Start button to begin the tagging process.

   - **Tag faces in specified photos**: select if you only want to scan and tag faces in the photos in a specific media folder. Select Next to continue and then the folders you want to scan for faces. Select Start to begin.

   - **Continue previous tagging process**: select this option if CyberLink MediaShow already scanned some photos for faces, but you did not complete the tagging process.

   - **Note**: if your computer’s VGA card supports CUDA technology or DirectX 11, and there are enough resources available, select Enable hardware support for face analysis to reduce the time it takes to analyze your photos.

3. CyberLink MediaShow analyzes the specified photos for faces and then displays the results in the Tag Faces window.

**Managing Tagged Faces**

After CyberLink MediaShow has analyzed photos, it groups similar faces together in
the Tag Faces window. In this window you can review each face and associate it with a person in your media library, or add a new person. You can also skip faces if you want to add them later.

**Note:** use the drop-down to sort the tagged faces by name or tag count.

To manage the tag faces, for each group of faces, do one of the following:

- click on **Select** and then select the person from the list that matches the face in the photo.

- if the person tagged in the photo is not in your media library, click on **Select** and then **Add New Person**. Enter the person’s name and then select **OK** to add the person and tag the person in the photo.

- if the person tagged in the photo is in the suggestion list, just select the button with the name of the person.

- select **Skip** to ignore the tagged face.

**Manually Tagging Faces**

If CyberLink MediaShow missed faces during the auto tagging process, you can manually tag faces in your photos. To manually tag faces, do this:

1. Right-click on a photo in the media library and then select **Edit**.

2. In the Edit window, select **Tag Faces**.

3. Select **Create New Tag**.

4. Drag the square to the position in the photo where the face is located.

5. Resize the square if required and then select **Unknown**.

6. Select an existing person from the list or select **Add New Person** to add a new person to the media library. Enter the person’s name and then select **OK** to add the person and tag the person in the photo.

7. Repeat the process to tag other faces in the photo. Select **Close** when you are done tagging faces, and then **Back** to return to the media window.

**Creating and Managing Albums**

You can create new albums or place your photos into existing ones, helping you
organize your photos and prepare it for slideshows, and more.

### Adding Photos to Albums

You can organize your photos into albums, which are then easier to use in slideshows, etc. To add photos to an album, just right-click on the file and then select **Add to Album**. In the pop-up menu that displays, select one of the following albums:

- **Favorite Media**: select to add the media file to your favorite media album. You can also add media to this album at any time by selecting the button when playing back media.

- **Create New Album**: select to create a new album in the media library and add the selected media to it.

- **Custom Albums**: any custom albums you create are in this pop-up menu. Just select to add the media to the album.

Repeat the above process to add as many photos to an album as you wish.

### Creating New Albums

If you want to add a new album to the media library, do this:

1. Select **Create New Album** in the Albums section, or right-click on a photo in the library, select **Add to Album > Create New Album**.

2. In the Album Information window, enter the information as follows:
   - **Name**: enter the album name.
   - **Date**: enter a date for the album, which can be either the date the media was shot or the date the album was created.
   - **Location taken**: if required, enter the location where the media was shot.
   - **Description**: add a description for the album, if required.

3. Select **OK**. The custom album is saved to the media library.
Edit and Print Photos

You can perform instant fixes, fine tuning, and apply effects to your photos within the CyberLink MediaShow program. Once edited, you can then print them out in a variety of sizes.

To access the editing and printing features in CyberLink MediaShow, select the **Edit and Print Photos** function within the **Photo** menu of CyberLink PowerStarter. The CyberLink MediaShow main window displays.

Editing Photos

CyberLink MediaShow offers several editing features, including adding creative effects to your photos or performing various touch ups on photos in preparation for using your media in slideshows, printing, etc.

To fix and enhance your photos, do this:

1. Select all of the photos in the media library that you want to edit, and then drag and drop them in the media tray.
2. Select the **Edit** button, and then select **Edit Media**. The Edit window opens.

When editing a photo, select the button to compare all of the changes to your photos side by side.

Making Photo Fixes

CyberLink MediaShow provides you with several common fixes for your photos, including automatic adjustments, fixing red-eye, and a photo cropping feature.

In the Edit window, select the tab to perform the following fixes on your photos.

- **Crop**: allows you to cut out the parts of the photo you don’t want. Select a **Fixed ratio** to crop a specified size out of the photo, or **None** to manually
select the crop area. Drag the mouse on the photo to set the area you want cropped, and then select **Apply** to perform the crop.

*Note:* select **Invert** to reverse the size of a fixed area.

- **Red-eye**: select this option to remove unwanted red-eye from your photos. Just follow the instructions on the user interface to use this feature.
- **Straighten**: if your photo was taken unevenly and appears to be crooked, select this option and use the Degree slider to make it more level.
- **Auto Brightness**: select to automatically adjust the photo’s brightness.
- **Auto Contrast**: select to automatically adjust the photo’s contrast.
- **Auto Balance**: select to automatically adjust the photo’s color balance.
- **Auto Fix Lighting**: select to automatically fix the lighting within the photo.

Select **Close** to save the changes to your photo, and then **Back** to return to the main media window.

### Fine Tuning Photos

Use the fine tune function in the Edit window to manually adjust the **Brightness**, **Contrast**, **Saturation**, **White balance** or **Sharpness** of photos. Select the **Edit** tab and use the sliders to adjust the photo’s properties as required.

Select **Close** to save the changes to your photo, and then **Back** to return to the main media window.

### Adding Photo Effects

CyberLink MediaShow lets you add display and color effects to photos. Select the **Effects** tab to apply the following effects to photos in the media library.

- **Black & White**: converts color photos to black and white.
- **Sepia**: applies a dark brown-grey hue that resembles the effect of aging on old photographs.
- **Matte**: adds a white matting to photos. Select and drag the focus to an area of the photo, and then use the slider to increase or decrease the matting size.
CyberLink Media Suite

- **Vignette**: use your mouse to set the focus area of the vignette on the photo, and then use the slider to adjust its Size.

- **Soft Focus**: with your mouse, select the focus area for the effect, and then use the sliders to adjust the effect's Size and amount of blur (Soft) used.

- **Focal B&W**: the focal black and white effect applies color to a focused area of a photo, while the rest is in black and white. Use your mouse to set the focus area, and then use the slider to adjust the Size of the colored area.

- **Tint**: the tint effect adds highlighted color throughout your photo. Pick a desired color and then use the slider to adjust its Intensity.

- **Glow**: select the glow effect to make all the lighter areas of a photo appear to glow.

- **Antique**: select the antique effect to give your photo an old fashioned look, as if it was taken more than 50 years ago.

Select **Close** to save the changes to your photo, and then **Back** to return to the main media window.

**Print Photos**

CyberLink MediaShow lets you print out copies of your photos in a variety of sizes.

To print photos, do this:

1. Select all of the photos in the media library that you want to print, and then drag and drop them in the media tray.

2. Select the **Print** button, and then **Print**.

3. Set the printing options as follows:
   
   - **Layout**: select how you want the selected photos printed out. You can select from a variety of sizes, allowing you to print one or more photos out on a single piece of paper.
   
   - **Printer**: select the printer from the drop down menu that you want to print your photos on.
   
   - **Fit**: select whether to shrink the size of the photo to fit the printing area or have CyberLink MediaShow crop the photo to fit it.
   
   - **Printer Setup**: select this button to set specific printer options, such as page
layout and whether to print double-sided. The options available depend on
the printer that is connected to your computer.

- **No. of copies per photo**: enter the number of copies you would like printed
  out in the field provided.

4. Select the **Print** button to begin printing the photos.

## Create or Play a Slideshow

With CyberLink MediaShow, you can play all the photos in the media library in a
slideshow, or use them to create a custom slideshow.

To create or play a slideshow, select the **Create or Play a Slideshow** function within
the **Photo** menu of CyberLink PowerStarter. The CyberLink MediaShow main
window displays.

### Playing Slideshows

You can quickly play a slideshow with the photos in your CyberLink MediaShow
library. To play photos in a slideshow, do this:

1. Select all of the photos in the media library that you want to play in the
   slideshow, and then drag and drop them into the media tray.

2. Click the **play** button. The slideshow begins to play automatically.

3. Use the playback controls to control the playback of your slideshow.

### Creating Slideshows

CyberLink MediaShow lets you create custom slideshows that include both your
photos and videos. You can select from a number of styles, and then add
background music, text, and blank slides.

Once you are done creating a slideshow, select the **Preview** button to play it back,
or **Produce** if save it as a video file. Select the **Share** button to share the slideshow
video with friends and family.
Selecting Media for the Slideshow

To select the media for the custom slideshow, do this:

1. Select all of the media in the media library that you want to use in the slideshow, and then drag and drop it in the media tray.

2. Select the Create button, and then select Slideshow. The Create Slideshow window opens, displaying all of the media you selected in the slide tray.

Use the buttons on the slide tray to do the following:

- if you want to add more media to the slideshow, select the button, select it in the media library, and then select Add Selected Media. Select Close to return to the Create Slideshow window.

- if you want to add extra blank slides, or color boards, to a slideshow select the button. Select a color and then the Add Color Board button to add the new slide at the current location in the slideshow. Select Done when finished.

- select to rotate the media on a slide 90 degrees in the counterclockwise direction. Select to rotate it 90 degrees in the clockwise direction.

- to rearrange the slide order, just select media in the slide tray and then drag it to the new position.

- to remove media or a slide from the slideshow, select it in the slide tray and then select the button.

Designing the Slideshow

After you have added media to the slideshow, you can customize its design by
editing the style and adding background music.

To design the slideshow, do this:

1. In the Create Slideshow window, select the **Design** button.
2. Edit the options as follows:
   - **Slideshow style**: select the transitions used between the slides, which gives a slideshow its distinct style. Select **No Effect** if you don’t want to use any transitions between slides.
     
     _Note:_ you can customize the transition that is used on each slide in the slideshow. See [Customizing Slides](#) for more information.
   - **Aspect ratio**: set the aspect ratio of the slideshow.
   - **Display duration**: enter in the length of time each photo or custom slide is displayed in the slideshow. The duration entered does not alter the length of any video clips included in the slideshow.
     
     _Note:_ you can customize the duration of each slide in the slideshow. See [Customizing Slides](#) for more information.
   - **Set default text**: select this option if you want to set the default text that is displayed when to add new text to a slide. One selected, you can either have CyberLink MediaShow use a photo’s description or file name by default.
3. Select **OK** to close the Design window, and then **Save** to save the changes to the slideshow.

### Customizing Slides

In the Transition window you set the transition that is used on every slide in the slideshow, and customize each slide’s duration. You can also set the audio level for any video clips that are included in the slideshow.

To customize the slides, do this:

1. Select the slide in the slide tray that you want to customize, and then select the **Transition** button.
2. In the Transition window, edit the options as follows:
   - **Display duration**: enter in the length of time the selected photo or custom slide is displayed in the slideshow.
• **Sound mix:** if the selected slide contains a video clip, use this slider to set the audio level between the background music and the video’s audio. Drag the slider all the way to the **Background music** side if you want to completely mute the video’s audio.

• **Transition:** select the transition that is used at the beginning of the selected slide.

3. Select **OK** to close the Transition window, and then **Save** to save the changes to the slideshow.

### Adding Title Text to Slides

You can add title text descriptions to slides in a slideshow, on both slides that contain media and any blank or title slides you add.

To add text to slides, do this:

1. Select the slide in the slide tray that you want to add text to, and then select the **Add Text** button.

2. Select in the title text box that displays on the slide and then enter or modify the default text on the slide.

3. Select the **A** button if you want to modify the title text’s font properties, including style, color, and size.

4. Select and drag the title text box to the desired location on the slide.

5. Select **A** to add text animation effects, if required.

6. Select **A** to preview the text on the slide. Once you are satisfied, select outside the text box to set the text.

   **Note:** to edit existing text on a slide, just double-click on the title text box. Select to remove any unwanted text.

7. To add more text to this or other slides, select the **Add Text** button and then repeat the above steps.

8. Select **Save** to save the changes to the slideshow.
Adding Music

You can add background music to your slideshow. To add background music, do this:

1. In the Create Slideshow window, select the **Music** button.
2. Add background music to the slideshow as follows:
   - **Play music during slideshow**: select this option to enable background music during the playback of the slideshow.
   - **Match slideshow length to music**: select this option to set the duration of the entire slideshow to the length of all the music selected.

   *Note: when this option is selected, all other duration settings are ignored.*
   
   - **Select folder or audio file for background music**: select the **Browse** button and then select the audio file (in the WMA or MP3 format) that will be used as the slideshow’s background music. You can also select a folder that contains multiple music files.
   - **Select and arrange background music**: select this option if you want to customize the background music in the slideshow. Use the **+** button to add all of the individual music files you want in the background music playlist.

   Use the **▲** and **▼** buttons to set the order of the music in the playlist, and **▶** to preview the music.

3. Select **OK** to close the Add Music window, and then **Save** to save the changes to the slideshow.

Create a Photo Gallery Disc

When you create a photo gallery disc, you are essentially creating a photo album on a disc. You can create more than one album on a single photo gallery disc.

To create and burn a photo gallery disc, do this:

1. Select the **Create a Photo Gallery Disc** function within the **Photo** menu of CyberLink PowerStarter, and then select the type of disc (**CD**, **DVD**, **Blu-ray Disc**) you want to create. The Photo Gallery Disc window opens.
2. In the Disc Compilation pane, if required, enter a custom name for the photo
CyberLink Media Suite

album that will appear on the disc.

3. Use the search pane to find the photos you want to include on your disc. Select the photos you want to burn and then drag and drop them in the disc content area (Click the button to switch to the thumbnail view to make it easier to find the exact photos you are looking for).

---

**Note:** you can also click the button to add the photos. Ensure that you have the album you want to add the photos to selected in the Disc Compilation pane before adding your photos.

---

4. Repeat the last two steps to add more photos to an album as required. You can also click the button to create a new album on the disc.

5. After you have added all of the photos you want on your disc, click the button.

6. Click on the Gallery tab and then configure the photo gallery disc settings as follows:

   • **Gallery title:** enter in a title for your photo gallery. The title displays on your disc after it is burned.

   • **Custom Logo:** click on the Custom Logo button to customize the logo used in your photo gallery, as follows:
     - **Don't include logo in photo gallery:** select this option if you don’t want to include a logo in your created photo gallery.
     - **Include logo in photo gallery:** select this option if you want to include a logo in your created photo gallery. Click the button to select an image to use as the logo, replacing the default CyberLink logo.
     - **Include URL link on logo:** select this option if you want to include a URL link on the logo. Once selected, enter the URL address in the field provided (http://). When users click on the logo in the created photo gallery, they are taken to the specified URL.

   • Click OK to save your changes.

   • **Slideshow speed:** enter the duration, in seconds, you want each photo or slide to display when your photo gallery is played as a slideshow.

   • **Background image:** click the Change button to set the image that is used as the background in the photo gallery. If none of the default images suit your
gallery disc, click the Browse button to use your own custom image.

- **Display EXIF information**: if the images were taken with a digital camera that supports EXIF, select this option if you want the image details displayed in your photo gallery disc.

- **Add background music**: if you want music to play in the background as users browse through your photo gallery disc, select this option and then click Browse to select the music file you want to use.

- **Include editor’s note**: if you want to include a note or description about your photo gallery, select this option, click Edit, and then enter the Title and Content (note/description) in the fields provided.

- **Include external URL**: if you want to include a web site link on the photo gallery disc, select this option, click Edit, and then enter the web site Name and URL (http://) in the fields provided.

- Click the Preview button if you want to view what your photo gallery disc will look like once it is burned to a disc. Click Export to create the stand-alone photo gallery application in a folder on your hard drive.

7. If required, adjust the settings on the Common and Burner tabs (see the related sections in Power2Go Settings for more information).

8. Click Burn when you are ready to burn your disc.

   Note: select the Auto shut down after burning option if you want CyberLink Power2Go to automatically shut down your computer once it has successfully burned your disc.

9. When the burning is complete, select one of the following options in the window box that opens:

   - Click View Log to view the burning log. The log opens in your default TXT editor, where you can view and save it.

   - Click OK to close the window and then exit.

### Create a Slideshow Disc

You can use CyberLink MediaShow to create professional looking slideshow discs using your photos.

To begin creating a slideshow DVD disc with your photos, select the Create a

Slideshow Disc function within the Photo menu of CyberLink PowerStarter. The CyberLink MediaShow main window displays.

Selecting Photos for Disc

To select the photos you want to include on the slideshow disc, do this:

1. Select all of the photos in the media library that you want to include on the slideshow disc, and then drag and drop it in the media tray.

2. Select the Create button, and then select Movie Disc. The Create Movie Disc window opens, displaying all of the photos you selected in the tray.

3. Use the buttons on the tray to do the following:

   • if you want to add more photos, select the Photos tab and then the button. Select the photos in the media library, and then select Add Selected Media. Select Close to return to the Create Movie Disc window.

   • to rearrange the order of the media on the disc, just select media in the tray and then drag it to the new position.

   • to remove media from the disc, select it in the tray and then select the button.

Creating the Disc

In the Create Movie Disc window, just follow the outline steps to set disc properties, as follows:

1. In the Step 1: Choose disc format section, do the following:

   • Format: select the format of your movie disc. DVD: creates a standard DVD disc.

   • Destination drive: select the drive you want to use to burn the move to disc.
2. **In Step 2: Enter movie disc title**, enter a **Title** for your movie disc, which displays on the disc menu’s home page.

3. **In Step 3: Select menu template**, select the disc menu template you want to use on your disc. Select **No Menu** to have the video on your disc play automatically when the disc is inserted into a disc player.

   *Note*: select **Download** to download additional disc menu templates from DirectorZone. Once downloaded, click **to import the menu templates into CyberLink MediaShow.**

4. Select **Save** to save the changes to the slideshow disc.

### Editing Slideshow Style and Music

The photos you include on the disc are turned into a slideshow. Before burning the photos to disc, you can edit the slideshow’s style and music, if required.

To edit the slideshow style and music, do this:

1. Select the **Photos** tab and then **to open the Style & Music window.**

2. Set **Slideshow style** options as follows:
   
   - **Style**: select one of the following the slideshow styles - **Fading**: adds a fade in and fade out effect between the photos in your slideshow. **Motion**: adds pan and zoom effects to make your slideshow more engaging with the appearance of motion. **Cell**: displays pictures in a creative, movie like slideshow, complete with credits. If you choose to include background music, CyberLink MediaShow uses **Magic Slideshow** technology to display the photos dynamically along to the beat of the music.

   - **Change Slideshow Opening**: if you select the cell slideshow style, select this button to enter a title and author’s name for the slideshow, which then appears on the opening slide. Deselect the **Enable slideshow opening page** if you don’t want it in your slideshow.

   - **Speed**: set the playback speed of the slides in the slideshow.

3. Set **Background music** options as follows:

   - **Play music during slideshow**: select this option to enable background music in the slideshow.

   - **Match slideshow length to music**: select this option to set the duration of the entire slideshow to the length of all the music selected.
• **Select folder or audio file for background music**: select the *Browse* button and then select the audio file (in the WMA or MP3 format) that will be used as the slideshow’s background music. You can also select a folder that contains multiple music files.

• **Select and arrange background music**: select this option if you want to customize the background music in the slideshow. Use the ‹+› button to add all of the individual music files you want in the background music playlist. Use the ‹↑› and ‹↓› buttons to set the order of the music in the playlist, and ‹►› to preview the music.

4. Select **OK** to close the Style & Music window, and then **Save** to save the changes to the slideshow disc.

### Configuring Advanced Disc Settings

Before you burn a disc, it is recommended that you first configure advanced disc settings.

To do this, select the **Advanced** button in the Create Movie Disc window and then configure the settings as follows:

**Disc Selection**

• **TV format**: select the TV format (NTSC or PAL) of the video that is burned to the disc. This format should correspond with the region in which you plan to play the disc.

• **Video format**: displays the format of the video that is burned to the disc. **MPEG-2**: standard definition format found on most DVD discs, and therefore takes up less space.

• **Audio format**: select the desired audio encoding used for your outputted disc’s audio.

• **Aspect ratio**: set the aspect ratio for the video. For DVDs you may select between 4:3 or 16:9.

• **Quality**: select the video quality of the disc’s video. The video quality settings offer different bit rates, resulting in files of different sizes. The higher the quality of the video, the larger the resulting file and the shorter the length of video that can fit onto a disc.

• **Disc capacity**: displays the available space on the disc currently inserted in the
selected optical drive (burning device).

Preferences

- **Display TV safe zone in the Preview window**: select to display a box that indicates an area that will fit on most TVs, when previewing your completed disc. Utilizing this feature ensures that menu items are within the display range of most TVs.

- **Auto menu timeout**: select this option for the video on your disc to play automatically after displaying the menu for a short duration.

Burning Your Disc

The final step in creating your movie disc is to select the **Burn** button to begin burning your media to disc. Before you proceed, use the **Preview** function to ensure your disc is exactly the way you want it.

Upload to Social Network

You can share all of your photos with your friends and family by uploading them directly from the CyberLink MediaShow library to Flickr and Facebook.

To upload photos to a social network, select the **Upload to Social Network** function within the **Photo** menu of CyberLink PowerStarter. The CyberLink MediaShow main window displays.

Uploading Photos to Facebook

You can upload photos from the library directly to your Facebook page.

To upload videos to Facebook, do this:

_Note: you can also drag and drop some photos or a whole album onto the Facebook section of the library sidebar to quickly upload them._

1. Select all of the photos in the media library that you want to upload to Facebook, and then drag and drop them in the media tray.

2. Select the **Share** tab and then the **Facebook** button. The Upload to Facebook wizard displays.

3. Follow the detailed instructions in the wizard to upload your photos.
Note: if you do not have a Facebook account, select the Sign up to Facebook link to register.

4. Select the Done button once your photos are uploaded.

Uploading Photos to Flickr

You can upload photos from the library directly to the Flickr photo sharing web service.

To upload photos to Flickr, do this:

1. Select all of the photos in the media library that you want to upload to Flickr, and then drag and drop them in the media tray.
2. Select the Share tab and then the Flickr button. The Upload to Flickr wizard displays.
3. Follow the detailed instructions in the wizard to upload your photos.
   
   Note: if you do not have a Flickr account, select the Sign up to Flickr link to register.

4. Select the Done button once your photos are uploaded.

Advanced Photo Adjustment

Use can perform more advanced adjustments on your photos using the CyberLink PhotoDirector program. Use the controls to change a photo's white balance, tone, or fine tune the color. You can also choose from a number of adjustment presets to make instant adjustments.

To adjust your photos in CyberLink PhotoDirector, do this:

1. Select the Advanced Photo Adjustment function within the Photo menu of CyberLink PowerStarter. CyberLink PhotoDirector launches.
2. If required, click on Library, and then on the Import button at the bottom of the library panel.
3. Select one of the following import options:
   - Photos: select to import individual photo files. Once selected, browse to and then select all of the photos on your computer/removable device that you
want to import, and then click Open. Thumbnails of all the photos display in the Photo Import window.

*Note: if the photo files you want to import are not displayed in the current folder, ensure that the correct file type is selected in the bottom right corner of the Select Some Photos dialog.*

- **Folder**: select to import a folder that contains your photos. Once selected, browse to and then select the folder on your computer/removable device that you want to import photos from, and then click **Select Folder**. Thumbnails of all the photos in the selected folder display in the Photo Import window.

- **From Camera**: select to import photos directly from a digital camera or a card reader. Ensure that your camera is connected to your computer (and turned on) and then select **From Camera** to import photos from it. Once selected, the Photo Import window displays. Select your camera (or card reader) from the **Source** drop-down to display thumbnails of all the photos in the Photo Import window.

  *Note: you can use in the bottom right of the preview window to resize the photo thumbnails.*

4. Select **Include subfolders**, if you are importing photos from a folder, device, or digital camera, to display and import photos that are in any subfolders.

5. Select **Exclude possible duplicates** to have CyberLink PhotoDirector filter out any photos that were imported previously.

6. Manually select the thumbnails of the photos you want to import, or use the (deselect all) and (select all) buttons if necessary.

7. Select one of the following two import options:
   - **Keep in current location**: keeps the photos in their original source location.
   - **Make extra copy in**: select this option if you want CyberLink PhotoDirector to
copy the imported photos to another location you select in the Destination drop-down.

8. If copying the photos to another location, click \( \ldots \) to select the Destination where the imported photos are copied. You can also click \( \checkmark \) to edit the name of the photo folders in this location, if required.

9. If copying the photos to another location, you can **Organize** the photos by selecting one of the following:

- **Put in Single Folder**: puts all of the photos in one folder.
- **By Original Folder Structure**: duplicates the original folder structure from the source location.
- **By Capture Date**: puts the photos in a series of folders, labeled by the date they were captured. Click \( \text{ Calendar } \) to set the date format for the folder naming.

10. Click **Import**. CyberLink PhotoDirector imports the photos into your project library.

    **Note**: you can also drag and drop photos onto the CyberLink PhotoDirector user interface to import them into the program.

11. Proceed to adjust your imported photos as required.

    **Note**: for a detailed description on how to adjust photos in CyberLink PhotoDirector, press the F1 key on your keyboard when within the program to open its detailed help file.
Chapter 5:

Music

The music function lets you burn audio files to a DVD or CD with CyberLink Power2Go. You can also rip music from an audio CD onto your hard drive, and play back music using CyberLink PowerDVD.

Use CyberLink WaveEditor to edit and add useful effects to your audio files, or record your own custom audio.

\textbf{Note:} to ensure that your computer has the required codecs for burning and ripping music files, please make sure that Windows Media Player 10 or later is installed on your computer.

Play Music

To play back music in CyberLink PowerDVD, select the \textbf{Play Music} function within the \textbf{Music} menu of CyberLink PowerStarter. The CyberLink PowerDVD main window displays.

To play back audio in CyberLink PowerDVD, do one of the following:

- insert an audio CD into your disc drive and CyberLink PowerDVD will play it automatically. If there is a disc already in your disc drive when you opened CyberLink PowerDVD, click the \textbf{My Computer} tab in the media panel, browse to and select the disc drive, and then click play to begin playback.

- drag and drop audio files directly onto the CyberLink PowerDVD user interface.

- to play an audio file in your media library, select \textbf{Music} in the media panel, and then browse to the folder that contains your audio. Double-click on an audio file to begin playback.

- to play audio files on your hard drive, click the \textbf{My Computer} tab in the media panel, and then browse to the folder that contains your audio files. Double-click on an audio file to begin playback.

\textbf{Note:} for a list of the available playback controls, see \textit{Music Playback Controls}. 
**Supported Audio Formats**

In CyberLink PowerDVD you can play back audio in the following audio formats:

<table>
<thead>
<tr>
<th>Optical Disc Types</th>
<th>File Formats</th>
</tr>
</thead>
<tbody>
<tr>
<td>CD</td>
<td>Audio, Karaoke</td>
</tr>
</tbody>
</table>

**Audio file formats:** AAC, AC3, ADTS, AOB, APE, DTS, FLAC, M4A, MID, MKA, MP2, MP3, MPA, OGG, RMI, WAV, WMA.

**Music Playback Controls**

When playing music on the Music tab, the playback controls display as follows:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Button</th>
<th>Hotkey</th>

</tr>
</tbody>
</table>
Playing Music in Mini Player Mode

You can play music in the media library in PowerDVD Mini Player mode. This mode makes it easy to listen to music in CyberLink PowerDVD while performing other tasks on your computer.

**Note:** you can also use the PowerDVD Mini Player mode to play music playlists. Note that if any videos or photos are in a playlist that contains music, then the Mini Player mode is not available.

To access the Mini Player mode during music playback, click on the playback controls and then select Mini Player. CyberLink PowerDVD will switch to Mini Player mode and display the album art just above the task bar in Windows. Hover your mouse over the album art to display the available controls in the Mini Player.

You can use the controls to pause/start playback, go to the previous or next song in the folder or playlist, or click to mute the music volume. To view the current song and playback information, click the in the bottom right corner to expand the Mini Player.

You can click on an empty area of the player and drag it to a new location on your computer's desktop. Click to exit Mini Player mode and return to Classic mode.
Rip an Audio CD

The Rip Audio function in CyberLink Power2Go copies audio tracks from an audio CD to your hard drive in MP3*, WAV, or WMA format.

* this feature is not available in some versions of CyberLink Power2Go.

To rip audio files to your hard drive, do this:

2. Insert your disc and then select your drive from the Source drop-down.

Note: if you insert a new disc or select a different drive, click to refresh and ensure the most updated information displays.

3. Select the audio tracks that you want to copy to your hard drive.

4. Click the button and locate the folder that you want to copy the audio tracks to.

5. In the Settings section, set the Format and Quality of the outputted audio files.

6. Click Go to copy the files to your computer.

Convert an Audio File

You can use the Audio Converter utility in CyberLink Power2Go to convert audio files to different audio formats.

To convert audio files, do this:

1. Select the Convert an Audio File function within the Music menu of CyberLink PowerStarter. The CyberLink Power2Go Audio Converter window displays.

2. Click and then select the files you want to convert. Click Open to add them into the Audio Converter window.

3. Click the button and then select the location where you want to save the converted audio files.

4. In the Settings section, set the Format and Quality of the converted files from
5. Click **Go** to convert the audio files and save the files to your computer.

## Burn a Music Disc

CyberLink Power2Go makes it easy to create discs to play back your music. You can create a regular audio CD for playback on traditional CD players, or create a DVD or CD that contains MP3 or WMA files.

To burn an audio music CD or MP3/WMA music disc, do this:

1. Select the **Burn a Music Disc** function within the **Music** menu of CyberLink PowerStarter. In the CyberLink Power2Go new task window, select the type of music disc you want to create (**Audio CD**, **WMA CD**, **MP3* CD**, **WMA DVD**, **MP3* DVD**).

2. Use the search pane to find the music you want to include on your disc. Select the files you want to burn and then drag and drop them in the disc content area.

   **Note:** you can also click the button to add the music files or the other available buttons to reorder and preview the music on the disc. If you want to extract the audio from a video clip and include it on your music disc, simply add the video clip to the disc.

3. If you would like to edit or add effects to a music file, select it and then click the button to edit it in CyberLink WaveEditor. Please consult the help file in CyberLink WaveEditor for detailed information on editing audio in that program. Once you finish editing an audio file, the updated file is placed back in the disc content area.

4. Once you have added all of the content you want on your disc, click the **Burn now** button.

5. If required, adjust the settings on the music (**Audio CD**, **MP3* Disc**, **WMA Quality**), **Common**, or **Burner** tabs.

6. Click **Burn** when you are ready to burn your disc.

   **Note:** select the **Auto shut down after burning** option if you want CyberLink Power2Go to automatically shut down your computer once it has successfully burned your disc.

7. When the burning is complete, select one of the following options in the
window that opens:

- Click **View Log** to view the burning log. The log opens in your default TXT editor, where you can view and save it.
- Click **OK** to close the window.

---

**Note:** *this feature is not available in some versions of CyberLink Power2Go.*

## Record Audio

You can record your own custom audio in the WAV format in CyberLink WaveEditor. The audio you record is then imported directly into the library and saved to the export folder selected in Preferences.

To record audio, do this:

1. Select the **Record Audio** function within the **Music** menu of CyberLink PowerStarter. The CyberLink WaveEditor recording window displays.

2. Set your recording preferences as follows:
   - use the slider control to adjust the recording input volume.
   - select **Time limit** and then input a time if you want the recording to automatically stop after recording for a specified duration.
   - select **Size limit** and then input an amount if you want the recording to automatically stop after reaching the indicated file size.
   - select **Settings** to select your audio device and input.
   - select **Profile** to set the quality of the recorded audio.
   - select ⌋ or Begin with fade-in if you want the recorded audio to fade-in, or ⌃ End with fade-out if you want it to fade-out at the end.

3. To begin recording audio, click ⌋. Click ⌃ to stop recording and save/import the recorded file into the CyberLink WaveEditor library. Click **Close** to return to main window.
Edit Audio

With CyberLink WaveEditor you can trim, cut, and enhance the audio files that you want to use in your video editing or share with friends.

To edit your audio files in CyberLink WaveEditor, select **Edit Audio** in the **Music** menu of the CyberLink PowerStarter.

*Note:* for a more detailed description of this program and its functions, please consult the product's help file.

Adding Audio into the Library

CyberLink WaveEditor lets you import audio from your hard drive or from a removable device.

Importing Audio

To import audio from your hard drive or a removable device, click ![Folder](image), browse to its location, and then click on **Open**. You can import multiple audio files into the library at once and then work on them all in CyberLink WaveEditor.

*Note:* you can also drag and drop audio files into the Library area of CyberLink WaveEditor to import them into the program.

Supported Formats

CyberLink WaveEditor supports the import of audio files in the following formats:

**Audio:** MP3, WAV, WMA, M4A*, AC3**

*Note:* * available in the **Standard version**, and only in the **LE version** when running the program under **Windows 7**. ** not available in the **LE version** of CyberLink WaveEditor.

Editing Audio

Once you have all your audio in the library, you can start editing it. Editing consists of cropping, trimming, and even adding portions (using the paste function) to your audio files.

To edit an audio file, do this:
1. Select the audio file in the library that you want to edit.
2. Decide whether you want to edit both channels, or just one channel.
3. Use range selection to select the portion of an audio file you want to edit.
4. Use the editing tools to perform edits on your audio files as follows:

<table>
<thead>
<tr>
<th>Editing Tools</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Cut" /></td>
<td>Click to cut the selected portion out of the audio file, and place it on your clipboard for pasting.</td>
</tr>
<tr>
<td><img src="image" alt="Copy" /></td>
<td>Click to make a copy of the selected portion on your clipboard for pasting.</td>
</tr>
<tr>
<td><img src="image" alt="Paste" /></td>
<td>Click to paste the audio waveform you cut or copied to the right of the current timeline position.</td>
</tr>
<tr>
<td><img src="image" alt="Delete" /></td>
<td>Click to delete the selected portion of the audio file.</td>
</tr>
<tr>
<td><img src="image" alt="Crop" /></td>
<td>Click to crop to the selected portion of the audio file, removing the parts of the audio file that are not selected.</td>
</tr>
</tbody>
</table>

**Note:** when you perform edits on an audio file, the original audio file is not changed. To save the edits, you must export the audio file. See Exporting Audio for more information.

**Adjusting the Master Volume**

CyberLink WaveEditor lets you adjust the volume of an audio file at any point in the timeline. You can make it louder at a certain moment, and then quieter at another, as required.

To adjust the master volume of an audio file, do this:

1. Use the playback controls or drag the timeline slider to location the position where you want the audio to reach its loudest/quietest point.
2. Click on the line in the master volume area and drag the volume key to desired volume level.
3. Use the playback controls or drag the timeline slider to locate the position where you want the change in audio level to begin.

4. Click on the line in the master volume area and drag the volume key back to the original volume level.

   **Note:** this last step is just a recommendation, and is not necessary if you want the audio to fade up or down from the very beginning to the desired level.

5. Continue adjusting the volume keys as required to achieve the desired audio levels throughout the audio file.

   **Note:** to remove a volume key and reset its position back to the original value, select it and drag it outside the master volume area.

### Audio Effects

Within CyberLink WaveEditor you can choose from a number of default effects and apply them to your audio files. You can also import custom VST plugin effects that you downloaded and apply them to your audio.

### Default Effects

The default effects available in CyberLink WaveEditor include the most widely used for your convenience. Users that are looking for more advanced audio effects, can import custom VST plugin effects.

   **Note:** to preview an effect, click it in the Effects area, select the **Preview** check box, and then click the **button.
Importing Effects

With VST plugin effects you can find and add the desired custom effect you want on your audio. VST plugin effects are widely available for download from the Internet, and can easily be imported into CyberLink WaveEditor.

*Note: CyberLink does not guarantee the usability of downloaded VST plugin effects, nor the quality of the VST modules.*

If you have downloaded a VST plugin effect, do this to import it into CyberLink WaveEditor:

1. From the menu select **Effects > VST > Import VST Effect**.
2. Click on the button and then browse to the location where the downloaded VST plugin effect is located.

*Note: CyberLink WaveEditor imports VST plugin effects that are in the DLL format. If the downloaded effect is in the ZIP format, you must first unzip it before trying to import it into the program.*

3. Select the VST plugin effect and then click **Open**.
4. Click **OK** to import the effect into the VST section of CyberLink WaveEditor.

Applying Effects

When applying effects to audio, you can either apply it to a selected range or the entire clip. To apply an effect to an audio file, do this:

1. Select the audio file in the library you want to apply the effect to.
2. Decide whether you want to apply the effect to both channels, or just one channel.
3. Use range selection to select the portion of the audio file that you want to apply the effect to.

*Note: if don't select any portion of the audio file, the effect is applied to the entire clip.*

4. Click on the effect you want to apply. The effect window displays.
5. Adjust the effect settings as required.
6. Click on the **OK** button to apply the effect to the audio file.
Exporting Audio

Every time you want to save the changes you make to an audio file, CyberLink WaveEditor saves it as a new file. Essentially you are exporting the original file, and saving it as new version and even in a new file format if you prefer.

To save and export your audio file as a new version, do this:

1. Select the audio file in the library you want to save/export and then click.

2. Enter in a new file name for the file and then select the format you want to save it as in the Save as type drop down.

3. Click on Save. The file is saved to the export folder selected in Preferences.

Supported Formats

CyberLink WaveEditor supports the export of audio files into the following formats:

**Audio:** MP3**, WAV, WMA, M4A**

*Note:* * available in the Standard version, and only in the LE version when running the program under Windows 7. ** not available in the LE version of CyberLink WaveEditor.
Chapter 6:

Data & Backup

With CyberLink Media Suite you burn your data files to a Blu-ray Disc, DVD or CD with CyberLink Power2Go. You can also easily make an exact copy of a data DVD or CD using CyberLink Power2Go, and copy a non-CSS protected DVD Video disc with CyberLink PowerDVD Copy.

Use CyberLink PowerBackup to safely back up and restore all the data on your computer.

Create a Data Disc

You can burn data files to a CD, DVD, or Blu-ray Disc. Data files can include almost any kind of document or digital file.

To burn a data disc, do this:

1. Select the Create a Data Disc option in the Data & Backup menu of CyberLink PowerStarter, and then select the type of disc (CD, DVD, Blu-ray Disc) you want to create. The CyberLink Power2Go Data Disc window opens.

2. Use the search pane to find the files you want to include on your disc. Select the files or folders you want to burn and then drag and drop them in the disc content area.

   **Note:** you can also click the button to add the data files or click the button to create a folder on the disc.

3. After you have added all of the content that you want to burn, click the Burn now button.

4. If required, adjust the settings on the Data, Common, or Burner tabs.

5. Click Burn when you are ready to burn your disc.

   **Note:** select the Auto shut down after burning option if you want CyberLink Power2Go to automatically shut down your computer once it has successfully burned your disc.

6. When the burning is complete, select one of the following options in the window that opens:

   - Click View Log to view the burning log. The log opens in your default TXT
Click OK to close the window.

Copy a Disc or Burn a Disc Image

The Copy Disc or Burn a Disc Image function allows you to make an exact copy of a disc. However, you must copy the disc contents onto a blank disc of the same disc type. The Copy Disc function also allows you to burn disc images.

*Note: some discs may not be copied if they are copy-protected or contain errors.*

Copying a Disc

The copy disc option allows you to make an exact copy of a disc of any format. However, you must copy the disc contents onto a blank disc of the same disc type. (You cannot, for example, copy content from a CD onto a DVD.)

To copy a disc, do this:

1. Select the **Copy a Disc or Burn a Disc Image** function in the **Data & Backup** menu of the CyberLink PowerStarter program window. In the CyberLink Power2Go new task window, select **Copy Disc** to open the Copy Disc window.
2. Select your source and target drives.
3. Select a **Read speed** and **Write speed** for each disc. The speeds you should select will depend on the burning drives you are using and the quality of the discs.
4. Select **Ignore reading error** if you want CyberLink Power2Go to copy the disc even if errors are encountered.
5. Select the **Copy to hard disk** option, if available, to also save a copy of the disc to your computer’s hard drive.
6. Select **Copy whole disc** if you want to copy the entire contents of the disc onto the destination disc.
7. Enter the **Number of copies** you want to burn.
8. If available, you can use the following options to assist with the burning process:
• select **Perform write simulation** if you want CyberLink Power2Go to simulate the burning process first to ensure the burn will finish successfully.

• If available, select **Verify recorded data** if you want CyberLink Power2Go to verify that the content was successfully burned to the disc.

• If available, select **Enable defect management** to have CyberLink Power2Go try to fix any defects on a disc so that content burns correctly.

9. Click **Copy** to begin the copy and burn process.

10. When burning is complete, select an option in the window that opens:

• Click **View Log** to view the burning log. The log opens in your default TXT editor, where you can view and save it.

• Click **OK** to close the window.

### Burning a Disc Image

A disc image is a file on your computer that is the duplicate of the contents and file structure of a disc. CyberLink Power2Go lets you burn a disc image to a disc.

To burn a disc image, do this:

1. Select the **Copy a Disc or Burn a Disc Image** function in the **Data & Backup** menu of the CyberLink PowerStarter program window. In the CyberLink Power2Go new task window, select **Burn Disc Image** to open the Burn Disc Image window.

2. Click ![Folder Icon] to select the disc image you want to burn to a disc.

3. Insert your disc and select your drive in the drop-down in the **To** section.

4. Select a **Write speed** for burning the disc. The speed you should select will depend on the burning drive you are using and the quality of the disc.

5. Enter the **Number of copies** you want to burn.

6. If available, you can use the following options to assist with the burning process:

• select **Perform write simulation** if you want CyberLink Power2Go to simulate the burning process first to ensure the burn will finish successfully.
select **Verify recorded data** if you want CyberLink Power2Go to verify that the content was successfully burned to the disc.

select **Enable defect management** to have CyberLink Power2Go try to fix any defects on a disc so that content burns correctly.

7. Click **Burn** to start the burning process.

**Note:** select the **Auto shut down after burning** option if you want CyberLink Power2Go to automatically shut down your computer once it has successfully burned your disc.

8. When burning is complete, select an option in the window that opens:

- Click **View Log** to view the burning log. The log opens in your default TXT editor, where you can view and save it.

- Click **OK** to close the window.

## Back Up and Restore Files

Backing up data is an important security procedure that can save large amounts of time and money in case of disaster, disk failure, attack by a hacker or virus, etc. By keeping a backup copy of your important data on another medium, you can quickly and reliably restore your data to its original state.

### Backing Up Files

To back up your data, first select **Back Up and Restore Files** in the **Data & Backup** menu of the CyberLink PowerStarter program window. Ensure that the **Backup** button at the top of the window is clicked, and then follow these simple steps:

**Step 1 - Select Source**

In the Backup window select the source by locating and checking the files and folders that you want to back up in the two file directory panes. (These panes resemble Windows Explorer in functionality.) You can choose to backup **Files and Folders** or **Application Data** by selecting the desired file type above the directory panes.
Step 2 - Select Destination

Click **Select Destination**, then set your backup destination.

- **Back up to**: Select your backup destination from the drop-down box. Backup destinations may include hard disk or a disc burner (depending on your available hardware).

- **Back up as**: Give each backup file a unique name. To save the backup file to a different directory, click **Browse**, then locate and select the folder you want to use.

- **Include Restore Tool**: Select to create an executable (.exe) file that allows you to restore your data on a computer that does not have the PowerBackup program installed.

- **Split into volumes**: Divide your backup files into volumes (portions) of the size you specify.

Step 3 - Select Method

Click **Select Method**, then choose the backup method (and advanced options, if desired) that you want to use.

- Backup methods include **Full**, **Differential** and **Incremental**.

- For more options, click **Options**.

**Note**: the specific functions of this program depend on the version you have purchased, and therefore some features may not be available.

Step 4 - Back Up Files

Click **Back Up Files**. Verify that the settings are correct, then click one of the buttons to begin your backup.

- Click **Back Up Now** to begin backing up immediately.

- Click **Add to Scheduler** to schedule the backup for a later time.
Restoring Files

To restore your data after a backup, first select **Back Up and Restore Files** in the **Data & Backup** menu of the CyberLink PowerStarter program window. Click the **Restore** button at the top of the window, and then follow these simple steps:

**Step 1 - Select Source**

In the Restore window select the source by selecting the restoration source from the **Restore from** drop-down box.

- **Backup file**: Restore from an existing backup file. To open a backup file, click **Browse**, then locate and open the file you want to use.

- **My Catalog**: Restore from existing records of previous backup jobs. (To delete records from **My Catalog**, use the **Edit > Delete Catalog Record** or **Delete All Catalog Records** command.)

- **Disc drive**: Restore from a disc.

Once you select the source, select the files you want to restore.

**Step 2 - Select Destination**

Click **Select Destination**, then set your restoration destination.

- **Original location**: Restore to the original location from which the files were backed up.

- **Alternative location**: Restore to a new location. To set a new directory, click **Browse**, then locate and select the folder you want to use.

- **Single directory**: Restore all of the backed up files to a single new directory. To set a new directory, click **Browse**, then locate and select the folder you want to use.

**Step 3 - Select Method**

Click **Select Method**, then choose the restoration method you want to use.

- **Do not overwrite**: Restores only files that are not found on your hard drive,
and does not overwrite existing files.

- **Overwrite older files**: Overwrites existing files on your hard drive if the backed-up copy is newer.

- **Always overwrite the files on my computer**: Overwrites existing files on your hard drive with the backed-up copy in every case.

- **Ask before overwriting**: Prompts you to decide which copy you want to keep.

### Step 4 - Restore Files

Click **Restore Files** and then verify that the settings are correct. Click **Restore Now** to begin restoring files immediately.

### Duplicate a Movie Disc

CyberLink PowerDVD Copy is a specialized tool for copying DVD movies from disc or hard drive onto a back-up DVD. You can likewise create a DVD folder on your hard drive, or burn it to a DVD as a movie. Easy-to-select options and an uncomplicated interface simplify the DVD-copying process.

To copy a movie DVD, do this:

1. Select **Duplicate a Movie Disc** in the **Data & Backup** menu of the CyberLink PowerStarter program window. The CyberLink PowerDVD Copy window displays.

2. Select your video source of the movie DVD you would like to copy.

3. Select the destination where to copy the movie DVD.

4. Click the button and select the specific content from the DVD you want to copy, if not all is required.

5. Click . CyberLink PowerDVD Copy burns the movie onto the disc.
Chapter 7:
Utilities

CyberLink Media Suite provides you with a number of useful disc utilities, including allowing you to erase rewritable discs and also design and print professional looking labels using CyberLink LabelPrint to complete the disc making process.

You can also mount a disc image, extract files from existing disc images, burn a DVD folder, and much more.

Note: for a more detailed description of these programs and their functions, please consult the product help files.

Erase a Disc

If you are using a re-writable disc, you can erase content that was previously recorded onto it. This allows you to reuse the same discs over and over without the need to continually buy new discs.

To erase a disc, do this:

1. Select Erase a Disc function within in the Utilities menu of CyberLink PowerStarter window. The Erase Rewritable Media window displays.
2. Insert your disc and select your Burner from the drop-down.
3. Select one of the following erase methods:
   - Quick erase: erases the disc index contained on the disc.
   - Full erase: erases all of the content the disc contains.
4. Click Erase to start the erase process.

Extract Files From a Disc Image

With CyberLink Power2Go you can use the CyberLink ISO Viewer to view disc images in the ISO, P2I (Power2Go image) or RDF format on your computer’s hard drive. This convenient tool lets you view the contents of an image file, and quickly extract files or burn the image to a disc.

To extract files from a disc image, do this:
1. Select **Extract Files from a Disc Image** function within in the **Utilities** menu of CyberLink PowerStarter. The CyberLink ISO Viewer displays.

2. When in the CyberLink ISO Viewer, you can perform the following functions:

- click the button to browse to and open an image file (in the ISO, P2I or RDF format) on your computer. When opened, you can see all the files contained within the image.

  *Note:* to change the view of the files in the CyberLink ISO Viewer, click .

- click on a file in the CyberLink ISO Viewer and then click to view it in its default program.

- to extract files from the image and save them to your computer, select them and then click .

### Mount a Virtual Drive

The Power2Go Virtual Drive lets you mount a disc image file and access it as if it is a real disc drive on your computer.

To mount a disc image using the Power2Go Virtual Drive, do this:

1. Select **Mount a Virtual Drive** function within in the **Utilities** menu of CyberLink PowerStarter window. The Power2Go Virtual Drive window displays.

2. Select the **Enable virtual drive** option.

3. In the **Image location** field, click and select the location of the image you want to mount. CyberLink Power2Go supports the mounting of images in the ISO, P2I (Power2Go image) or RDF formats.

4. Assign a **Drive letter** for the mounted disc image, by selecting it from the drop-down. The drive letter you assign will be how you identify the mounted drive in Windows Explorer.

5. Click on **OK** to mount the drive. The disc image will be available like any other disc drive in Windows Explorer.

  *Note:* the disc image stays mounted as a drive until you disable it, even if you reboot your computer.
Transfer Media to Devices

After converting media to another format, CyberLink MediaEspresso will transfer it automatically to a device that is connected via a USB cable. To convert media and transfer it to a device, select the **Transfer Media to Devices** function within the **Utilities** menu of CyberLink PowerStarter. The CyberLink MediaEspresso program opens.

*Note:* for a more detailed description of this program and its functions, please consult the product's help file.

To transfer media, during the conversion process, ensure that the **Transfer to connected device after conversion** option is selected and that your device is connected to your computer. The converted media will be transferred to your device once the conversion is complete.

Burn a DVD Folder

If you have created a DVD folder you can burn this folder to a disc for storage.

To burn a disc from a DVD folder, do this:

1. Select **Burn a DVD Folder** function within in the **Utilities** menu of CyberLink PowerStarter. The Burn Disc from Folder window of CyberLink PowerProducer displays.
2. Insert your disc and select your drive.
3. Click ![Folder icon] to select the folder you want to burn to a disc.
4. Click **Start** to begin. CyberLink PowerProducer will burn the folder to the disc.
5. Click **Close** to return to the Disc Utilities window.

Print a Disc Label

Cyberlink LabelPrint offers a wide variety of layout formats and supports a number of printing options, including printing directly on your disc using LightScribe and Labelflash technologies.

*Note:* for a more detailed description of this application and its functions, please consult the product's help file.

To begin creating a label, select **Print a Disc Label** function within in the **Utilities**
menu of CyberLink PowerStarter.

Step 1 - Select a Label Type

The first step in creating a label is to select the type of label you want to print. You can select to create LightScribe label, Labelflash label, a disc label, a mini disc label, a front cover, back cover or a disc inlay.

Step 2 - Edit Disc Information

Add or edit disc information, such as a title, which will allow you to recognize the disc. Add or edit the content list information to keep track of which files you have added to the disc. You can add or edit this information on the Edit Disc Information page.

Step 3 - Edit Layout

By selecting a layout, modifying the fonts, and using a custom background image, you can create a more personalized disc label. You can:

- select a label layout.
- add a background image.
- add or modify text.

Step 4 - Print

You are now ready to print your label with CyberLink LabelPrint. You can print on one of the following media:

- **Plain paper**: Allows you to print on any sheet of paper your printer supports.
- **Label paper**: Provides labels for easy printing.
- **Directly onto your disc**: Does away with paper labels, but requires a special LightScribe or Labelflash burning drive and disc.
Chapter 8:

Technical Support

This chapter contains technical support information. It includes all the information to find the answers you need to assist you. You may also find answers quickly by contacting your local distributor/dealer.

Before Contacting Technical Support

Please take advantage of one of CyberLink's free technical support options:

- consult the user's guide or the online help installed with your program.
- refer to the Knowledge Base in the Support section of the CyberLink web site.

http://www.cyberlink.com/support/index.html

The FAQs may have information and helpful hints that are more current than the User Guide and online help.

When contacting technical support by email or phone, please have the following information ready:

- registered **product key** (your product key can be found on the software disc envelope, the box cover, or in the e-mail received after you purchased CyberLink products on the CyberLink store).
- the product name, version and build number, which generally can be found by clicking on the product name image on the user interface.
- the version of Windows installed on your system.
- hardware devices on your system (capture card, sound card, VGA card) and their specifications.
- the wording of any warning messages that were displayed (You may want to write this down or take a screen capture).
- a detailed description of the problem and under what circumstances it occurred.
Web Support

Solutions to your problems are available 24 hours a day at no cost on the CyberLink web sites:

*Note: you must first register as a member before using CyberLink web support.*

CyberLink provides a wide range of web support options, including FAQs, in the following languages:

<table>
