Chapter 1:

Introduction

This chapter introduces the CyberLink Power2Go program, starting with a description of the program's functions, followed by an explanation of Power2Go's two burning modes, Power2Go mode and Power2Go Express mode. The chapter ends with a list of recommended system minimum requirements.

This chapter contains the following sections:

- Welcome on p.2
- The Power2Go Program on p.3
- Register Your Software on p.11
- Supported File & Disc Types on p.13
- System Requirements on p.14
Welcome

Welcome to the CyberLink family of digital video tools! CyberLink Power2Go is a disc-burning program, which is a handy utility for burning discs containing movies made using CyberLink’s movie-making software, or when you want to make music discs, data discs, and even bootable discs.

Power2Go’s main features include the following:

- burns data, music, movie, and mixed media discs
- converts audio files to and from the .MP3, .WAV, and .WMA formats as well as different qualities
- erases discs that contain unwanted content
- copies entire discs
- creates slideshows from individual photo files
- Power2Go Express mode supports drag-and-drop to desktop icons for burning in the fewest number of steps
- burns DVD folders to disc
- supports CD text for additional textual information (such as a description of the artist or song) with audio tracks
The Power2Go Program

The CyberLink Power2Go program can run in either of two modes: Power2Go Express mode or Power2Go mode. Power2Go Express mode is the simpler of the two modes, allowing you to burn discs in two steps. Power2Go mode, on the other hand, offers you access to more options and disc utilities.

Power2Go Express Mode

Power2Go Express mode uses the following icons, placed on your desktop:

- Drag data files to this icon to burn a data disc. (See Burn a Data Disc in Power2Go Express Mode on p.26.)

- Drag music files to this icon to burn an Audio CD music disc. (See Burn an Audio CD Music Disc in Power2Go Express Mode on p.30.)

- Drag video files to this icon to burn a movie disc. (See Burn a Video/Photo Disc in Power2Go Express Mode on p.34.)

- Double-click this icon to copy a disc. (See Copying Discs on p.44.)

Note: You can click and drag the entire column of icons to a different location on your desktop, or right-click on a single icon to move it individually.
Burning in Power2Go Express Mode

Dragging files in appropriate formats to these icons prepares Power2Go to burn a disc. You can double-click the icon to open a window for further modification of your burning configuration.

- To burn a data disc, see Burn a Data Disc in Power2Go Express Mode on p.26.
- To burn an Audio CD music disc, see Burn an Audio CD Music Disc in Power2Go Express Mode on p.30.
- To burn a movie disc, see Burn a Video/Photo Disc in Power2Go Express Mode on p.34.
- To copy a disc, see Copying Discs on p.44.

If you do not need to add any more files or modify your burning configuration, click the Rec button after dragging files onto the icon. Burning begins immediately, and the process is displayed on the icon. (Click Stop to cancel the burning process.)

Right-clicking an icon on the desktop opens a command menu to control burning tasks.

Click a menu item to perform the corresponding task.
Configuring Power2Go Express Mode

Right-clicking the icon on the system tray opens a command menu to control Power2Go Express mode icons, to erase a disc, and to control the Power2Go program.

Use one of the Hide options to remove an icon from display on the desktop. (The option then becomes Show, allowing you to display the icon again.) You can also choose to display large or normal-sized icons on the desktop.

Check the Always on Top option to keep Power2Go on top of any other programs you are running.

Check the Start Program When System Starts option to run Power2Go whenever you power on your computer.

Click Erase Disc... to erase a rewritable disc.

Click About to display Power2Go version information, click Help to open the help file, and click Exit to close Power2Go Express mode.

Changing Power2Go Express Mode Skins

Power2Go Express Mode provides several different skins that allow you to change the look of the desktop icons. To use a different skin, right-click the icon on the system tray to open the command menu, click the Change Skin... option, then select a skin. If you would like to use a custom skin, click the Browse... option. In the dialog box that opens, open the skin file you want to use. The Power2Go Express icons change to the skin you have selected.
Power2Go Mode

Power2Go mode opens in a program interface. By default, the Select a Burning Task window opens each time you run the program in Power2Go mode. Power2Go mode also displays a program window with a column of buttons that allow you to perform each of Power2Go’s different tasks.

To begin a burning task in the Select a Burning Task window, click an icon, then click OK to begin your task.

You can disable the Select a Burning Task window by unchecking the Display this window whenever Power2Go opens option.
Chapter 1: Introduction

The icons available in the Select a Burning Task window are described below:

- Burns data files to disc.
- Burns audio files to disc.
- Burns video files to disc.
- Copies disc content onto a blank disc.
- Burns mixed media content to disc.
- Burns a disc image to disc. (See Burning a Disc Image on p.48.)
- Saves a disc image to your hard drive for future burning. (See Saving a Disc Image on p.49.)
- Erases a rewritable disc. (See Erasing a Disc on p.50.)
- Rips audio tracks from an Audio CD to your hard drive. (See Ripping Audio on p.51.)
- Converts an audio file to a different audio format. (You can convert to and from the .MP3, .WAV, and .WMA formats.) Also converts audio files to a different quality. (See Converting Audio Files on p.54.)
- Burns a DVD folder to a DVD-R/RW, DVD+R/RW, or DVD-RAM disc. (See Burning a DVD Folder on p.53.)
When you close (or disable) the Select a Burning Task window, the Power2Go program displays a row of buttons at the top, which allow you to access certain important functions.
The available buttons are described below:

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="" /></td>
<td>Starts a new burning task.</td>
</tr>
<tr>
<td><img src="image2" alt="" /></td>
<td>Opens an existing project.</td>
</tr>
<tr>
<td><img src="image3" alt="" /></td>
<td>Saves an existing project. Click the down-arrow to save a project under a different name.</td>
</tr>
<tr>

<td>Opens the help file.</td>
</tr>
<tr>
<td><img src="image10" alt="" /></td>
<td>Displays Power2Go version information.</td>
</tr>
</tbody>
</table>
Disc Capacity Bar

At the bottom of the program window is the disc capacity bar, which displays a graph of the current and maximum capacity of the disc. (The capacity bar appears after you have selected a burning task.) Below the graph is detailed information about the disc, such as the number of folders and files in the current project and on the disc, as well as the disc’s free and used space. Use this bar to keep track of the amount of content you add to the disc.

The capacity bar may display a certain amount of used space even before you add files to be burned to your disc. This is because more data gets burned to the disc than just the files you select. This extra data includes the disc's file system, data specific to the file format you choose, as well as fixed spaces that must be retained between files, sessions, and audio tracks. The real used space is displayed on the capacity bar to give you an accurate indication of how much data can be burned to a disc, instead of relying on trial and error when filling a disc to capacity.
Register Your Software

After you install the program, a registration window opens, prompting you to register your product. It is important to register your software in order to receive technical support or other information from CyberLink.

To register your software, do this:

1. Enter your personal information in the First Name, Last Name, and Email entry boxes.
   - Check one or both of the options to receive information from CyberLink, or uncheck if you do not wish to receive this information.

2. Click Register Now.
   - If you have previously registered this product, click I Have Already Registered. The registration box will no longer open when you run the program.
   - If you would like to register this product at a later time, click Remind Me Later. The registration box will open each time you run the program until you register.
Supported File & Disc Types

- **Music formats**: Audio CD, .MP3, .WMA, .WAV
- **Video formats**: .AVI, .DAT, .MPE, .MPG, .MPEG
- **Image formats**: .BMP, .JPE, .JPEG, .JPG, .PSD
- **Disc types**: CD-R/RW, DVD-R/RW, DVD+R/RW, DVD-RAM
System Requirements

The system requirements listed below are recommended as minimums for burning. You may find that your system, while meeting these recommended minimums, requires expanded capacity during specific burning tasks.

<table>
<thead>
<tr>
<th>Minimum System Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>OS</td>
</tr>
<tr>
<td>Screen Resolution</td>
</tr>
</tbody>
</table>
| Memory | • 128MB SDRAM for music and data burning  
• 256MB (512MB recommended) for video burning |
| CPU | • VCD (MPEG-1) and DVD (MPEG-2) production: Intel Pentium III 800 MHz, or AMD Athlon 700 MHz |
| HDD Space | • 1GB for making VCDs  
• 5GB for making DVDs |
Chapter 2:

Burning

CyberLink Power2Go offers a number of burning functions, including burning data discs, music discs, video/photo discs, mixed discs, and bootable discs, as well as copying the entire contents of a disc. You can burn to CD or DVD in a variety of formats. Before burning a disc, you can set your burning configuration to ensure proper burning.

This chapter contains the following sections:

- Before Burning a Disc on p.16
- Burning Discs on p.25
- Copying Discs on p.44
Before Burning a Disc

Before you begin burning discs, you may want to set your burning configuration to match your burning drive and the discs you want to burn. The Configuration/Information button opens a window that displays disc and drive configuration information.

Configuration Options

To open the Configuration/Information window, click in the main program window. The Configuration/Information window opens, displaying tabs that contain configuration information related to your current burning task. (Only the Information tab appears if you have not selected a burning task.) Which tabs appear and which options they contain depend on the burning task you have selected.

Information Tab

The Information tab displays information about the selected disc drive, the disc in the drive, as well as the current project. Click the + box next to an item to view more detailed information.

- If you change discs or select a different drive, click Refresh to ensure that the most updated information is displayed.
Data Tab

The Data tab displays options for making a Data, CD Extra, or Mixed Mode CD.

- **Make this disc bootable**: You can create a bootable CD/DVD, which you can use to boot your computer from your CD/DVD drive if your operating system ever fails. Burning a bootable CD/DVD requires a bootable file (either on your hard drive or on a bootable floppy disc). Check **Use a bootable image file**, then click **Browse...** to locate the file you want to use, or check **Use a bootable floppy disc**.

- **Make auto-run disc**: When this option is enabled, a computer runs the selected auto-run file when the disc is inserted. Click **Browse...**, then locate the auto-run file you want to use. When this option is disabled, the computer takes no action when the disc is inserted.

- **Change disc icon**: You can change the icon that appears when this disc is viewed in Windows Explorer. Click **Browse...**, then locate the icon (.ICO) file you want to use.
Audio CD Tab

The Audio CD tab displays options for making an Audio CD music disc, or CD Extra or Mixed Mode CD.

- **Enable** CD text: allows you to add textual information (album or artist name) to audio tracks.

MP3 Quality Tab

The MP3 Quality tab displays options for making an MP3 music disc.

- **Quality**: Select a quality from the drop-down box.
- **Auto-generate playlist**: creates a playlist based on the songs you have added to your disc.
WMA Quality Tab

The WMA Quality tab displays options for making a WMA music disc.

- **Quality**: Select a quality from the drop-down box.
- **Auto-generate playlist**: creates a playlist based on the songs you have added to your disc.
Video Tab (for VCD)

The Video tab displays options for making a VCD or video DVD. The options described below pertain to VCDs only.

- **TV format**: Set the TV format (NTSC or PAL) of the video you are burning to disc.
- **Back up photos on disc**: Make backup copies of your original photos whose resolution is higher than that of your final movie production.
- **Include DVD auto-player**: Includes CyberLink’s PowerDVD software player. This option ensures that you can play your production on any computer that supports the disc type.

**Note**: In your version of Power2Go, this feature may be limited or unavailable. To obtain the full functioning of this feature, please purchase or install the retail version of Power2Go. (To check your version of Power2Go, click the **About** button.) Version information is provided in the Readme file.

- **Audio Format**: Select **LPCM** (an uncompressed audio format) or **Dolby Digital** (uses the Dolby Digital Consumer Encoder format).

**Note**: In your version of Power2Go, this feature may be limited or unavailable. To obtain the full functioning of this feature, please purchase or install the retail version of Power2Go. (To check your version of Power2Go, click the **About** button.) Version information is provided in the Readme file.
Video Tab (for DVD)

The Video tab displays options for making a VCD or video DVD. The options described below pertain to DVDs only.

- **TV format**: Set the TV format (NTSC or PAL) of the video you are burning to disc.
- **Burn to Hard Drive**: Check an option to burn both a disc image and a DVD folder, or only a DVD folder, to your hard drive. If you check the **Create DVD folder on hard drive** option, click **Browse...** to locate the folder you want to use.
- **Back up photos on disc**: Make backup copies of your original photos whose resolution is higher than that of your final movie production.
- **Include DVD auto-player**: Includes CyberLink’s PowerDVD software player. This option ensures that you can play your production on any computer that supports the disc type.

**Note**: In your version of Power2Go, this feature may be limited or unavailable. To obtain the full functioning of this feature, please purchase or install the retail version of Power2Go. (To check your version of Power2Go, click the **About** button.) Version information is provided in the Readme file.

- **Audio Format**: Select **LPCM** (an uncompressed audio format) or **Dolby Digital** (uses the Dolby Digital Consumer Encoder format).

**Note**: In your version of Power2Go, this feature may be limited or unavailable. To obtain the full functioning of this feature, please purchase or install the retail version of Power2Go. (To check your version of Power2Go, click the **About** button.) Version information is provided in the Readme file.
HighMAT Tab

The HighMAT tab displays options for making a HighMAT disc.

- **Slide Duration**: Select a duration from the drop-down box. To control a slideshow manually, select Manual.
- **Transition**: Select the transition type (None or Wipe Right) you want to use in your slide show.
- **Background Music**: To set background music on your disc’s menu page, click Browse..., then locate the music file you want to use.
- **Menu Background Image**: To set a background image on your disc’s menu page, click Browse..., then locate the image file you want to use.

**Note**: For best results, it is suggested that you use an image whose original resolution is 640 x 480 (or as close as possible).
Common Tab

The Common tab displays options available when burning different kinds of discs.

- **Disc name**: Enter a name for the disc. The disc name appears on a disc player when the disc is played.
- **Use original date and time**: This option uses the original date and time of the files that will be burned to the disc.
- **Use current date and time**: This option uses the current date and time on your computer.
- **Use this date and time**: This option uses a date and time of your choosing.
Burner Tab

The Burner tab displays information about your disc burner and options for controlling its functioning.

- **Burner**: Displays the selected disc burner.
- **Write speed**: Select a write speed from the drop-down list.
- **Number of copies**: Enter the number of copies of the disc you want to burn.
- **Enable buffer underrun protection**: Enabling this option ensures that data is written to disc without interruption. (An interruption in data can result in an unusable disc.)
- **Write simulation before burning**: Perform a write simulation to verify that your burner can burn to the disc at the selected speed without error.

**Note**: If you have enabled buffer underrun protection or have previously burned discs using the current configuration, you do not need to run a simulation.

- **Close disc**: Checking this option write-protects the disc. No further data can be appended to the disc after the current burning session.
- **Verify recorded data**: Check this option to compare recorded data to the source data to ensure accurate burning.
Burning Discs

The fastest way to burn any kind of disc is to drag and drop files from Windows Explorer onto the appropriate icon on the desktop. This method of burning is called Power2Go Express mode. This method is presented first in each of the following sections, as you may be able to accomplish your burning task without even opening the Power2Go program.

If you need to select more detailed options, or if you are already working in the Power2Go program, you can perform the same burning tasks within the program itself. This method of burning is called Power2Go mode, and is described after the Power2Go Express procedure, being the slightly longer and more complex process.

Multisession Discs

Multisession discs allow you to append additional data after the original burning session. Power2Go creates a multisession disc whenever you burn a CD-R, CD-RW, DVD-R, or DVD+R disc and choose not to close the disc. Therefore, you can continue to add content to a multisession disc until the disc is full or closed, at which point you can no longer append any further data.
Burn a Data Disc

The Data Disc option allows you to burn data files to a CD-R/RW, DVD-R/RW, DVD+R/RW, or DVD-RAM disc. Data files can include images and any other document files. You can also create a bootable CD/DVD, which you can use to boot your computer from your CD/DVD drive if your operating system ever fails.

Burn a Data Disc in Power2Go Express Mode

To burn a data disc in Power2Go Express mode, do this:

1. Open Windows Explorer, then locate the files you want to burn.
2. Drag the files to the Data icon.
   - To modify your burning configuration, double-click the Data icon. For more information, see Burn a Data Disc in Power2Go Mode on p.27.
3. Click Rec on the Data icon. Power2Go burns the disc.
Burn a Data Disc in Power2Go Mode

To burn a data disc in Power2Go mode, do this:

1. Open Power2Go. In the Select a Burning Task window, click the **Data Disc** icon, then select the type of disc (CD or DVD) you want to create. The Data Disc window opens.

2. Select your burning drive from the drop-down box.

3. Highlight the files or folders you want to burn, then drag to the destination disc or click ⬅️.
   - To remove a file, highlight it, then click ⬅️.
   - To remove all files, click ⬅️.
   - To create a new folder in the directory, click 📄. A folder is created under the current directory.

4. When you have added all of the content that you want to burn, click ✈️. The Configuration/Information window opens to the Burner tab, to allow you to set your burning configuration. (For more information, see Burner Tab on p.24.)

5. Make any necessary modifications to your burning configuration, then click **Burn**. Power2Go burns the disc.
Burn a Bootable Data Disc from an Image File

To burn a bootable data disc from an image file, do this:

1. Open Power2Go. In the Select a Burning Task window, click the Data Disc icon, then select CD or DVD.
2. Highlight the files or folders you want to burn, then drag to the destination disc or click .

   **Note:** You can burn a bootable disc with or without adding other data.

3. Click . The Configuration/Information window opens to the Data tab.
4. Check the **Make this disc bootable** option.
5. Check the **Use a bootable image file** option. Click **Browse...**, then locate the bootable disc partition. Click **OK**.
6. Click **Burn**. Power2Go burns the disc.
Burn a Bootable Data Disc from a Floppy Disc

To burn a bootable data disc from a bootable floppy disc, do this:

1. Open Power2Go. In the Select a Burning Task window, click the **Data Disc** icon, then select **CD** or **DVD**.

2. Highlight the files or folders you want to burn, then drag to the destination disc or click  

   **Note:** You can burn a bootable disc with or without adding other data.

3. Click `. The Configuration/Information window opens to the Data tab.

4. Check the **Make this disc bootable** option.

5. Check the **Use a bootable floppy disc** option.

6. Click **Burn**. A prompt appears, asking you to insert your bootable floppy disc.

7. Insert the floppy disc, then click **OK**. Power2Go copies the disc. When the copy task is complete, the disc drive opens and a prompt appears, asking you to insert your target disc.

8. Insert your target disc into your burning drive, then click **OK**.

9. Power2Go burns the disc.
Burn a Music Disc

The Music Disc option allows you to burn audio files to a CD or DVD. Depending on the audio file format you burn to, you may require a special player or player software to be able to listen to your disc.

Burn an Audio CD Music Disc in Power2Go Express Mode

To burn a music disc in Power2Go Express mode, do this:

1. Open Windows Explorer, then locate the files you want to burn.
2. Drag the files to the Music icon.
   - To modify your burning configuration, double-click the Music icon. For more information, see Burn an Audio CD Music Disc in Power2Go Mode on p.31.

   **Note:** All music discs burned in Power2Go Express mode are burned in Audio CD format.

3. Click Rec on the Music icon. Power2Go burns the disc.
Burn an Audio CD Music Disc in Power2Go Mode

To burn an Audio CD music disc in Power2Go mode, do this:

1. Open Power2Go. In the Select a Burning Task window, click the **Music Disc** icon. Select **CD**, then check the **Audio CD** format. The Audio Disc window opens.

2. Select your burning drive from the drop-down box.

3. Locate your music files in the directory on the left. Highlight the files you want to burn on the right, then drag to the list at the bottom of the window or click **Add**.
   - To remove a file, highlight it, then click **Delete**.
   - To remove all files, click **Clear**.
   - To move a file up or down in the list, highlight it, then click **Up** or **Down**.
   - To play a file before burning, highlight it, then click **Play**. Click **Stop** to stop. Drag the slider to set the audio volume level.

4. When you have added all of the content that you want to burn, click **Burn**. The Configuration/Information window opens to the Burner tab. (See Burner Tab on p.24.)
5. Modify your burning configuration (if necessary), then click **Burn**. Power2Go burns the disc.

**Burn an MP3/WMA Music Disc in Power2Go Mode**

To burn an MP3/WMA music disc in Power2Go mode, do this:

1. Open Power2Go. In the Select a Burning Task window, click the **Music Disc** icon. Select **CD** or **DVD**, then check the **MP3** or **WMA** format. The MP3/WMA Disc window opens.

![Power2Go interface](image)

2. Select your burning drive from the drop-down box.

3. Locate your music files in the directory on the left. Highlight the files and folders you want to burn on the right, then drag to the directory tree at the bottom of the window or click ![remove file](image) .

- To remove a file, highlight it, then click ![remove file](image).
- To remove all files, click ![clear](image).
- To create a new folder in the directory, click ![new folder](image). A folder is created under the current directory.
- To play a file before burning, highlight it, then click ![play](image). Click ![stop](image) to stop. Drag the slider to set the audio volume level.
4. When you have added all of the content that you want to burn, click . The Configuration/Information window opens to the Burner tab. (See Burner Tab on p.24.)

5. Modify your burning configuration (if necessary), then click **Burn**. Power2Go burns the disc.
Burn a Video/Photo Disc

The Video/Photo Disc option allows you to burn movie files to CD/DVD. You can also burn a slide show to disc or include a slide show along with your movie.

Burn a Video/Photo Disc in Power2Go Express Mode

To burn a video/photo disc in Power2Go Express mode, do this:

1. Open Windows Explorer, then locate the files you want to burn.
   
   **Note:** You can drag image files to burn a slide show, video files to burn a video disc, or both image and video files to burn a disc with both a video and a slide show.

2. Drag the files to the Video/Photo icon.
   
   - To modify your burning configuration, double-click the Video/Photo icon. For more information, see Burn a Video/Photo Disc in Power2Go Mode on p. 35.
   
   **Note:** Slide shows created in Express mode have a default slide duration of 3 seconds.

3. Click Rec on the Video/Photo icon. Power2Go burns the disc.
Burn a Video/Photo Disc in Power2Go Mode

To burn a video/photo disc in Power2Go mode, do this:

1. Open Power2Go. In the Select a Burning Task window, click the Video/Photo Disc icon. Select Video CD or DVD-Video, then click OK. The Video/Photo Disc window opens.

2. Select your burning drive from the drop-down box.

3. Click \( \text{\textcolor{red}{Add files}} \) to add files to your disc.
   - To remove a file, highlight it, then click \( \text{\textcolor{red}{Remove file}} \).
   - To remove all files, click \( \text{\textcolor{red}{Remove all files}} \).
   - To move a file left or right in the Video pane, highlight it, then click \( \text{\textcolor{red}{Move left}} \) or \( \text{\textcolor{red}{Move right}} \).
   - To preview a video title, click \( \text{\textcolor{red}{Preview title}} \).
   - To select a different background, select a background from the drop-down box or click \( \text{\textcolor{red}{Scroll left}} \) or \( \text{\textcolor{red}{Scroll right}} \) to scroll through the available backgrounds.
4. To add a slide show, click \(\text{Add Slide Show} \). The Slide Show Editor opens.

5. Customize your disc menu, if desired.

6. When you have added all of the content that you want to burn, click \(\text{Burn} \). The Configuration/Information window opens to the Burner tab. (See Burner Tab on p.24.)

7. Modify your burning configuration (if necessary), then click \textbf{Burn}. Power2Go burns the disc.
Burn a Mixed Disc

The Mixed Disc option allows you to burn mixed content to CD. The different disc formats (CD Extra, Mixed Mode CD, and HighMAT) allow you to burn different types of media to the same disc. Each of the formats is slightly different, so the different formats are presented separately below.

**CD Extra**

The CD Extra format allows you to burn audio files (in .CDA, .MP3, .WAV, or .WMA format) in Audio CD format followed by data files and folders on the same CD-R/RW disc. You can play the music on your computer with the proper playback software or in a normal CD player, and view the data files like a normal data disc.

To burn a CD Extra disc, do this:

1. Open Power2Go. In the Select a Burning Task window, click the **Mixed Disc** icon, then select **CD Extra**. The CD Extra window opens.

2. Select your burning drive from the drop-down box.
3. Drag and drop music files to the middle pane. (Dragging a folder to the pane adds the music files it contains, but does not create a folder on the disc.)

**Note:** If you drag music files to the bottom pane, you will be unable to play them later, as they will be read as data files.

- To remove a file, highlight it, then click ↓.
- To remove all files, click ↓.
- To move a file up or down in the list, highlight it, then click ▲ or ▼.
- To play a file before burning, highlight it, then click ▶. Click ■ to stop. Drag the slider to set the audio volume level.

4. Drag and drop data files and folders to the bottom pane. (Dragging a folder to the pane creates a folder on the disc.)

5. When you have added all of the content that you want to burn, click . The Configuration/Information window opens to the Burner tab, to allow you to set your burning configuration. (For more information, see Burner Tab on p.24.)

6. Make any necessary modifications to your burning configuration, then click **Burn.** Power2Go burns the disc.
Mixed Mode CD

Mixed Mode format allows you to burn data files and folders followed by audio files (in .CDA, .MP3, .WAV, or .WMA format) in Audio CD format on the same CD-R/RW disc. You can play the music on your computer with the proper playback software, and view the data files like a normal data disc.

To burn a Mixed Mode CD disc, do this:

1. Open Power2Go. In the Select a Burning Task window, click the Mixed Disc icon, then select Mixed Mode CD. The Mixed Mode CD window opens.

2. Select your burning drive from the drop-down box.

3. Drag and drop data files and folders to the middle pane. (Dragging a folder to the pane creates a folder on the disc.)

4. Drag and drop music files to the bottom pane. (Dragging a folder to the pane adds the music files it contains, but does not create a folder on the disc.)

Note: If you drag music files to the middle pane, you will be unable to play them later, as they will be read as data files.
• To remove a file, highlight it, then click .
• To remove all files, click .
• To move a file up or down in the list, highlight it, then click or .
• To play a file before burning, highlight it, then click . Click to stop. Drag the slider to set the audio volume level.

5. When you have added all of the content that you want to burn, click . The Configuration/Information window opens to the Burner tab, to allow you to set your burning configuration. (For more information, see Burner Tab on p.24.)

6. Make any necessary modifications to your burning configuration, then click **Burn**. Power2Go burns the disc.
HighMAT CD

HighMAT format allows you to burn a specially formatted data disc with movie, image, and music files that can be played on your computer or on a HighMAT player. Since the files are copied onto the disc instead of encoded, this format offers the advantage of retaining the original file quality.

To burn a HighMAT disc, do this:

1. Open Power2Go. In the Select a Burning Task window, click the Mixed Disc icon, then select HighMAT. The HighMAT window opens.

2. Select your burning drive from the drop-down box.

3. Highlight the files or folders you want to burn, then drag to the destination disc or click .
   - Click the Music, Photo, and Video icons to display the files that have been added under each category.
   - To remove a file, highlight it, then click .
   - To remove all files, click .
   - To move a file up or down in the list, highlight it, then click or .
• To play a file before burning, highlight it, then click \[\text{Play}\]. The Media Preview window opens, in which you can preview media clips using full playback controls.

4. When you have added all of the content that you want to burn, click \[\text{Burn}\]. The Configuration/Information window opens to the Burner tab, to allow you to set your burning configuration. (For more information, see Burner Tab on p.24.)

5. Make any necessary modifications to your burning configuration, then click **Burn**. Power2Go burns the disc.
Copy Discs

The Copy Disc option allows you to make an exact copy of a disc of any format. However, you must copy the disc contents onto a blank disc of the same format. (You cannot, for example, copy content from a CD onto a DVD.)

**Note:** Some discs may not be copied if they are copy-protected or contain errors.

The procedures for copying a disc from inside the Power2Go program or in Power2Go Express mode are very similar. Only the first step for opening the Copy Disc window is slightly different.

To copy a disc, do this:

1. Open Power2Go.
2. Open the Copy Disc window.
   - **Power2Go mode:** In the Select a Burning Task window, click the Copy Disc icon, then click OK.
   - **Express mode:** Double-click the Copy Disc icon.
3. Select your source and target drives.
4. Select a recording speed and enter the number of disc copies you want to burn. If you want to perform a write simulation before you burn the disc, check Perform write simulation.
5. Click Copy. Power2Go burns the copied data onto the disc.
Chapter 3:

Disc Utilities

In addition to simple disc burning functions, CyberLink Power2Go offers a number of other utilities for managing your discs and your disc image files, as well as for ripping audio tracks from an Audio CD onto your hard disk. These utilities are available in the Select a Burning Task window in Power2Go mode.

This chapter contains the following sections:

- Burning a Disc Image on p.48
- Saving a Disc Image on p.49
- Erasing a Disc on p.50
- Ripping Audio on p.51
- Burning a DVD Folder on p.53
- Converting Audio Files on p.54
Burning a Disc Image

A disc image is a duplicate of the content and file structure that is destined to be burned to disc. Using Power2Go, you can burn a disc image to CD or DVD. Burning a disc image to disc allows you to restore a saved disc image to disc as well as burn disc images created by the CyberLink Image Recorder.

To burn a disc image, do this:

1. Start CyberLink Power2Go.
2. In the Select a Burning Task window, click Disc Utilities, then select Burn Disc Image.
3. Click Browse... and locate the disc image.
4. Insert your disc and select your drive in the drop-down list.
   - You can select a different write speed or enter the number of copies you want to burn, if desired. If you want to perform a write simulation before you burn the disc, check Perform write simulation.
5. Click Burn to start. Power2Go displays the real-time progress of the task. When the task is completed, a screen message appears, informing you of the status.
Saving a Disc Image

Save a disc image onto your hard drive. This function is useful for backing up your disc onto your hard drive for future burning tasks.

To save a disc image, do this:

1. Start CyberLink Power2Go.
2. In the Select a Burning Task window, click Disc Utilities, then select Save Disc Image.

![Save Disc Image dialog box](image)

3. Insert your disc. If necessary, select your source drive in the From drop-down box.
4. Enter the destination folder and disc image file name in the To entry box, or click Browse..., select a folder, and enter the disc image file name.
5. Click Save to save the disc image. Power2Go displays the real-time progress of the task. When the task is completed, a screen message appears, informing you of the status.
Erasing a Disc

If you are using a rewritable disc, you can erase content that has been previously recorded onto it. This allows you to reuse the same discs over and over without the need to continually buy new discs. Most manufacturers suggest that current rewritable discs can be written to about 1,000 times.

To erase a disc, do this:

1. Start CyberLink Power2Go.
2. In the Select a Burning Task window, click **Disc Utilities**, then select **Erase Disc**.

3. Insert your disc and select your burner.
4. Select an erasing method.
   - The **Quick erase** option erases the disc index contained on the disc.
   - The **Full erase** option erases all of the content the disc contains.
5. Click **Erase** to start. Power2Go displays the real-time progress of the task. When the task is completed, a screen message appears, informing you of the status.
Ripping Audio

The Rip Audio function copies audio tracks from an Audio CD to your hard drive in .MP3, .WAV, or .WMA format. Keeping copies of your CDs on your hard drive allows you to play songs from numerous CDs without changing discs in your computer's disc drive and also saves wear and tear on your physical CD collection.

To rip audio files to your hard drive, do this:

1. Start CyberLink Power2Go.
2. In the Select a Burning Task window, click Disc Utilities, then select Rip Audio.

3. Insert your disc and select your drive.
   • If you change discs or select a different drive, click Refresh to ensure that the most updated information is displayed.
4. Select the audio track(s) you want to rip to your hard drive.

   **Note:** In your version of Power2Go, this feature may be limited or unavailable. To obtain the full functioning of this feature, please purchase or install the retail version of Power2Go. (To check your version of Power2Go, click the About button.) Version information is provided in the Readme file.
5. Locate the folder you want to rip the audio tracks to.
   • You can select a different audio format or quality, if desired.
6. Click **Go** to start. Power2Go displays the real-time progress of the task. When the task is completed, a screen message appears, informing you of the status.
Burning a DVD Folder

A DVD folder is a directory folder specifically created to store media content destined to be burned to disc. Using the Burn DVD Folder utility, you can burn a DVD folder to a DVD-R/RW, DVD+R/RW, or DVD-RAM disc.

To burn a DVD folder, do this:

1. Start CyberLink Power2Go.
2. In the Select a Burning Task window, click Disc Utilities, then select Burn DVD Folder.

3. Click Browse..., then select a destination folder.
4. Insert your disc and select your drive in the drop-down list.
   - You can select a different write speed or enter the number of copies you want to burn, if desired. If you want to perform a write simulation before you burn the disc, check Perform write simulation.
5. Click Burn to start. Power2Go displays the real-time progress of the task. When the task is completed, a screen message appears, informing you of the status.
Converting Audio Files

Use the Audio Converter utility to convert an audio file to a different audio format. (You can convert to and from the .MP3, .WAV, and .WMA formats.) You can also convert an audio file to a different quality.

To convert an audio file, do this:

1. Start CyberLink Power2Go.
2. In the Select a Burning Task window, click Disc Utilities, then select Convert Audio. The Audio File Converter window opens.

3. Click Import, then select the file(s) you want to convert. Click Import to open the files.
   - To remove a file, highlight it, then click .
   - To remove all files, click .

4. Click Browse..., then select a destination folder.
5. Specify the format you want to convert the files to, and, if necessary, select a quality from the drop-down box.
6. Click Go to start. Power2Go displays the real-time progress of the task. When the task is completed, a screen message appears, informing you of the status.
Appendix

This chapter contains technical support information as well as a reference section to help answer questions you may have about the different disc technologies available in CyberLink Power2Go.

This chapter contains the following sections:

- Technical Support on p.56
- CD vs. DVD on p.58
Technical Support

Before asking CyberLink for technical support, please refer to this user's guide or online help for information. It contains all the information you generally need to use the program. You may also find answers quickly by contacting your local distributor/dealer.

If your problem is not resolved using the above methods, please feel free to contact CyberLink for technical support.

Web Support

Solutions to your problems are available 24 hours a day and at no cost on our Web sites:

support.gocyberlink.com

www.gocyberlink.com

In addition to frequently asked questions, we also provide troubleshooting techniques, the latest in product news, and other relevant information.

Fax Support

Use our fax support number to get technical support quickly without spending time on the phone:

(886) 2-8667-1300

Note: Technical support is only offered to registered users, so please make sure to include your **CD-key** (located on your CD case) when faxing.
Telephone Support

You are welcome to call the CyberLink’s Technical Support Hotline at the phone number listed below during hours of availability:

<table>
<thead>
<tr>
<th>CyberLink Technical Support Information</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Support Phone Number</strong></td>
</tr>
<tr>
<td><strong>Support Hours</strong></td>
</tr>
</tbody>
</table>

*Note:* Technical support is only offered to registered users. Please be sure to have your **CD-key** (located on your CD case) on hand when calling.

When calling for support, please have your computer ready and provide us with the following information:

- your registered **CD-key**
- the product version
- the version of Windows installed on your system
- the hardware devices on your system and their specifications
- the wording of any warning messages that were displayed (You may want to write this down or make a screen capture.)
- a detailed description of the problem and under what circumstances it occurred
CD vs. DVD

CDs and DVDs look the same and do pretty much the same thing: store data. Both can be used to record data, music, or video files. However, CDs and DVDs are incompatible, bringing different advantages and disadvantages. Therefore, the decision of which to use is left up to you. You can avoid any confusion over which disc type to use by asking yourself two simple questions:

- What disc type is supported by my disc burner?
- What disc type is supported by my disc player?

Knowing the answers to these questions goes a long way towards deciding on a disc type: after all, you want to be able to play your disc after burning it, and of course, your burner must support the disc type you want to create.

In broad terms, discs are divided into CD (which, being the earlier technology, is more widely supported) and DVD (which holds seven times the amount of content, but requires a special drive). Following is a brief description of the different disc types supported by CyberLink Power2Go.
CD Types

CDs contain up to 74/80 minutes of high quality video or 650/700 MB of data.

CD-R

CD-R is a once-writable format. CD-RW burners and most new DVD burners can write in CD-R, and most DVD players can also read this format. The CD-R format is commonly used for distribution of computer data and digital audio.

CD-RW

CD-RW is a rewritable CD format. CD-RW burners and most new DVD burners can write in CD-RW, and most DVD players can also read this format. The CD-RW format is best suited for storage of computer data and digital audio.
DVD Types

DVD is a high capacity disc that holds anywhere from 4.7-17 GB of data, or from roughly 2-8 hours of video (depending on the type of DVD). Using the High Quality setting, you can expect to be able to record 1-2 hours of video.)

DVDs can be played on DVD players and computers equipped with DVD drives. For more detailed information on DVD-R/RW formats, see www.dvdrhelp.com/dvd or other web sources. For more detailed information on DVD+R/RW formats, see www.dvdrw.com or other web sources.

**DVD-R**
DVD-R is a once-writable DVD format. It is a competitor product to DVD+R, and is therefore not compatible with that format. Some new DVD burners can write in both DVD-R and DVD+R, and most DVD players can read both formats.

**DVD-RW**
DVD-RW is a DVD format that can be written to about 1,000 times. It is a competitor product to DVD+RW, and is therefore not compatible with that format. Some new DVD burners can write in both DVD-RW and DVD+RW, and most DVD players can read both formats.

**DVD+R**
DVD+R is a once-writable DVD format. It is a competitor product to DVD-R, and is therefore not compatible with that format. Some new DVD burners can write in both DVD-R and DVD+R, and most DVD players can read both formats.

**DVD+RW**
DVD+RW is a rewritable DVD format that can be written to about 1,000 times. It is a competitor product to DVD-RW, and is therefore not compatible with that format. Some new DVD burners can write in both DVD-RW and DVD+RW, and most DVD players can read both formats.
**DVD-RAM**  
DVD-RAM is a DVD format that can be written/rewritten to about 100,000 times. While DVD-RAM’s boasts technological advances, it is incompatible with many DVD burners and players.
