Chapter 1:

Introduction

This chapter provides an introduction to the CyberLink PowerDVD program. It outlines all of the latest features, available versions, and reviews the minimum system requirements for the program.

*Note: this document is for reference and informational use only. Its content and the corresponding program are subject to change without notice.*

Welcome

Welcome to the CyberLink family of digital media tools. CyberLink PowerDVD is the world's number one movie disc and digital media player, providing you with feature-rich controls, for an interactive and tailored viewing experience on your computer.

The first time you launch the program you will see a dialog welcoming you to CyberLink PowerDVD.
The first step of launching CyberLink PowerDVD is to import movies, TV shows, and other media files into your PowerDVD media library.

**Note:** if you previously had CyberLink PowerDVD 14 installed, you will be asked if you want to import your personal settings into the new version. Select *Yes, I would like to import my personal settings from my previous PowerDVD setup* to import the media library, playlists, PowerDVD settings, and more.

Click the **Set up Media Library** link to configure what media is imported into the library.

**Note:** in the welcome dialog you can also click the **Video Tutorials** link to view videos that outline the latest features in CyberLink PowerDVD. To review a list of all the new features, see *New Features in PowerDVD*.

You can also click the **Next Step** button to view more information about the advantages of the PowerDVD media library, and then click the **Select more folders in the media library** link to set the folders on your computer's hard drive and connected network devices that CyberLink PowerDVD will search for media in and then import into the library. For more information on importing movies, TV shows, and other media files in to the media library, see *Importing Media into the Media Library*. For a detailed overview of the media library itself, see *Media Library Overview*.

**Note:** once you proceed from this dialog window and close the welcome dialog, even if you didn't change the media library preferences, CyberLink PowerDVD will start searching the default media folders (Windows Media Library and Downloads folder) on your computer for media files. If you don't want CyberLink PowerDVD to do this, be sure to click the **Select more folders in the media library link** and remove all of the folders in the media library settings window.

Once you click the **Next Step** button, you are asked to participate in the CyberLink Product Improvement Program. Select *Yes, I would like to participate* to help make PowerDVD better. CyberLink will use the information collected to improve the PowerDVD program and to develop new features.

**Note:** you can always change your selection later in General settings. See *CyberLink Product Improvement Program* for more information.

Click **Confirm** to continue and launch CyberLink PowerDVD.
New Features in PowerDVD

This section outlines the latest features within the CyberLink PowerDVD program.

- Easier and more intuitive TrueTheater enhancement controls that result in better than expected video and audio quality.
- All new TrueTheater Color that makes the colors in video more vivid, without affecting skin tones.
- An enhanced playback engine for a smoother 4K movie playback experience.
- More exclusive audio output (WASAPI Exclusive) formats supported: FLAC, MP3, WAV, and WMA.
- Supports playback of lossless copies (ISO) of Blu-ray Discs and DVDs from hard drive or network device*.
- Hardware acceleration support for HEVC/H.265 video for smoother playback*.
- More audio effect presets to choose from or manually create your own in the Audio Equalizer.
- TV show import and management in the PowerDVD media library.
- Extract audio from imported video clips and pinned YouTube videos*.
- Edit tags in the music library to fix unknown artists and missing album art.
- Rip audio from CDs and import the audio into the media library*.
- Customize the PowerDVD UI by setting the background wallpaper, which you can download or create using your own photos.
- Mark the best moments in videos so you can always play the best part of your memories.
- More effortless photo browsing using Instant Thumbnails.
- More intuitive 3D playback options that auto play 3D content in 3D*.
- View all video bookmarks at a glance so you can more quickly jump to your favorite moments.
- A resume-able UI feature that remembers where you left off the next time you launch PowerDVD.
- Adds support for video transcoding and streaming playback from CyberLink
CyberLink PowerDVD

Cloud*.

- Share a link to your photos stored on CyberLink Cloud* with your family and friends.

Note: *this feature is not available in some versions of CyberLink PowerDVD.

PowerDVD Versions

The features that are available in CyberLink PowerDVD are completely dependent on the version you have installed on your computer. Click the CyberLink PowerDVD logo in the top left (or press Ctrl+Shift+A on your keyboard) to determine the version and build number for your copy of CyberLink PowerDVD.

To view the PowerDVD version table, please go to our web site: http://www.cyberlink.com/products/powerdvd-ultra/compare-versions_en_US.html

PowerDVD Live

PowerDVD Live is the first in its category to integrate full-featured media playback on desktop PCs and mobile devices together with cloud services. Your music, photos, and videos are always made available, no matter where, when or on which device you want to play it.

With a PowerDVD Live subscription, you get:

- All the award-winning features of the Ultra version of CyberLink PowerDVD, including enhanced Blu-ray playback.
- Cloud storage space on CyberLink Cloud, for instant media access anywhere.
- Guaranteed updates to the latest version of CyberLink PowerDVD Ultra.

PowerDVD Live is the must-have solution to access and play all your movies, videos, photos and music at their best.

CyberLink Cloud

CyberLink Cloud* is a cloud storage service from CyberLink where users can upload
videos, photos, and music to make it available anywhere for playback on a portable device using Power Media Player. CyberLink PowerDVD can also auto sync the media in your media library with the media on CyberLink Cloud. See Utilizing CyberLink Cloud for more information.

**Note**: *this feature is not available in some versions of CyberLink PowerDVD. Users for selected versions of CyberLink PowerDVD do get a free 1 year subscription to the CyberLink Cloud service.*

### Updating Your Software

Software upgrades and updates (patches) are periodically available from CyberLink. CyberLink PowerDVD automatically prompts you when either is available.

**Note**: you must connect to the Internet to use this feature.

To update your software, do this:

1. Open the Notification Center by doing one of the following:
   - click the button.
   - press the key on your keyboard.
   - click the Upgrade button in the About or PowerDVD Settings window.

   **Note**: when playing back media in Cinema mode, click and then select Upgrades. Select Updates to view information on the latest patch updates.

2. Click the feature you would like to upgrade to, or the patch you want to update to.

3. A web browser window opens, where you can purchase product upgrades or download the latest patch update.

### System Requirements

The system requirements for CyberLink PowerDVD vary depending on the movie content you are watching. 3D technologies require additional hardware to view 3D movie content. Please see the Hardware Support section on the CyberLink PowerDVD web site for more details about 3D hardware and graphics card support.
CyberLink PowerDVD optimizes performance by selecting the appropriate video de-interlacing algorithm for the available processing power. CyberLink PowerDVD maintains its support for processors below 1.6 GHz by ensuring that some CyberLink TrueTheater technologies are turned off by default. CyberLink PowerDVD's advanced audio and video technologies function better when used with processors above 2.4 GHz.

**Operating System**

  
  *Note: for new Blu-ray movies from Fox studios, Windows 8.1, 8, or 7 is required.*

**Processor (CPU)**

**Blu-ray Disc, DVD, and TrueTheater 3D Playback**

- Blu-ray Disc playback: Intel Core 2 Duo E6750 (2.66GHz), AMD Phenom 9450 (2.10GHz) or above.
- Blu-ray 3D playback: Intel Core i5, AMD Phenom II X4 or above.
- TrueTheater HD** and TrueTheater 3D** for Blu-ray and HD video: Intel Core i5 (with 4 Cores), AMD Phenom II X6 or above.
- DVD playback: Pentium 4 (2.4 GHz), Athlon 64 2800+ (1.8 GHz), AMD Fusion E-series & C-series or above.
  
  *Note: **some Fox titles released from Jul. 2013 will not support TrueTheater HD or TrueTheater 3D.*

**4K UltraHD with Hardware Acceleration**

- Intel 3rd generation Core i5 or above.
  
  *Note: CyberLink PowerDVD supports 4K Ultra HD video in H.264 / MP4 format at bitrates up to 60 Mbps.*
Graphics Cards (GPU)

Blu-ray Disc, DVD, and TrueTheater HD/3D Playback

- Intel HD Graphics, ATI Radeon HD 5000, NVIDIA GeForce 9500GT or above.

**Note:** we strongly recommend that you update your graphics card driver to the latest version. 3D display devices are required for TrueTheater 3D playback.

Blu-ray 3D playback

- Intel HD Graphic (Intel Core i5), NVIDIA GeForce GTX 400 series and GeForce GT 240/320/330/340, AMD Radeon HD 6000 and 6000M series with UVD 3 support.

DVD Playback

- PCI Express graphic accelerator supporting DirectX 9.0 or above.

Memory (RAM)

Blu-ray Disc, DVD, and TrueTheater 3D Playback

Blu-ray 3D with or without Hardware Acceleration

- 2 GB.

Hard Disk Space

- 500 MB for product installation.
Display Devices

Blu-ray Disc, DVD, and TrueTheater 3D Playback

- For Blu-ray titles with AACS and DVD titles with CPRM playback, PowerDVD 15 only allows output to display devices using DVI, HDMI and DisplayPort connector in order to be compliant with copy protection (HDCP).
- For other DVD and Blu-ray Disc playback: HDCP compliant display for digital output. TV or computer monitor for analog output.
- TrueTheater 3D playback: 3D display and 3D glasses required.

Blu-ray 3D with or without Hardware Acceleration

- 3D display and 3D glasses are required (NVIDIA 3D Vision, 3D Ready HDTV, HDMI 1.4-enabled TV, Micro-polarizer LCD or Anaglyph Red/Cyan Glasses). HDCP compliant display for digital output.

Disc Player

- Blu-ray Disc playback: BD-ROM/BD-RE or Super Multi Blu combo disc drive.
- DVD and TrueTheater 3D playback: DVD-ROM, DVD+R/RW, DVD-RAM or DVD Super Multi combo disc drive.

Internet Connection

- You can use your subscription software offline, however, the software requires that you connect to the Internet at least once every 30 days to ensure that your software is up-to-date and that your subscription is still active.
- Internet connection required for initial software activation, CyberLink Cloud, BD-Live, and Social Media Services (MoovieLive, Facebook, Flickr, YouTube).
Chapter 2:

PowerDVD Media Library

The PowerDVD media library is comprised of all the movies, TV shows, and other media files that you import from your computer’s hard drive and connected network devices. It is also where you can play back your movie discs and access the latest movie information from the Internet.

To ensure the PowerDVD media library has all of your media, make sure that you tell CyberLink PowerDVD where it is so it can be imported. For information on importing movies, TV shows, and other media files in to the media library, see Importing Media into the Media Library.

Once in the media library, you can organize, play, and share your movies, TV shows, and media, and much more. For a detailed overview of the media library itself, and what each tab contains, see Media Library Overview.

Importing Media into the Media Library

CyberLink PowerDVD imports the movies, TV shows, and other media files on your computer’s hard drive and connected network devices into the PowerDVD media library. By default CyberLink PowerDVD imports the movies, TV shows, and other media files that are in the most commonly used media folders. However you can specify which folders CyberLink should be importing media from by clicking the Set up Media Library link in the welcome dialog, or modifying the library folder lists in preferences. See Media Library Preferences for detailed information on setting which folders CyberLink PowerDVD imports movies and media from.

Once the movies, TV shows, and other media files are in the media library, you can easily play them back, share them with DLNA network and mobile devices, stream them to other devices, and much more. For more information on the PowerDVD media library and its available features, see Media Library Overview.

Note: if you don’t import media into the PowerDVD media library you can still access it on your computer’s hard drive via the My Computer tab of PowerDVD.
Media Library Overview

Click on the Media Library tab to access to all of the media you have imported into the media library and play back movie discs. The media library consists of four main sections: Movies/TV, Videos, Photos, and Music.

See the relevant sections in Playing Media in PowerDVD for detailed information on playing back the media in the media library.

Movies/TV in the Media Library

Click on the Movies/TV tab to play back movie discs, movie files, TV shows, and access the latest movie information from CyberLink's movie information services. The Movies/TV tab has four sections: Movie Info, Movie Discs, Movie Library, and TV Library.

Movie Info

The Movie Info section of the media library provides access to movie information from the internet. To view the latest movie releases and other information in the media window, click Open.

Movie Discs

Click to access the Movie Discs section of the Movies/TV tab, which is where you play back video discs in CyberLink PowerDVD. See Playing Movie Discs for information on the playback of discs in CyberLink PowerDVD.

Movie Library

Click on to open the Movie Library section and access all the movie files in CyberLink PowerDVD. Movie files are DVD/Blu-ray Disc folders and individual video files (movie files you recorded with a PVR) that are saved on your computer's hard drive. By importing them into the Movie Library section of the media library you can view movie cover art, rating information, and more. See Browsing Through Movies in the Movie Library for more information.
Note: disc folders and video files you import into the movie library are also available for playback in PowerDVD Cinema mode. * this feature is not available in some versions of CyberLink PowerDVD.

See Playing Movie Files for more information on playing movie files in CyberLink PowerDVD.

TV Shows

The TV Shows section is where TV show video files you recorded with a PVR are found in the PowerDVD media library. Click to access, organize, and play them back. See Browsing Through TV Shows for more information.

Videos in the Media Library

Click on the Videos tab to play back the video clips that are in your media library. These videos are home movies and other short clips that you may not want to include in the Movie Library. See Browsing Through Photo/Video Folders for more information.

See Playing Videos for information on the playback of video files in CyberLink PowerDVD.

Photos in the Media Library

Click on the Photos tab to view all of the photos that are in your media library. You can view these photos one at a time, in slideshows, and even share them or print them out. See Browsing Through Photo/Video Folders for more information.

See Viewing Photos for information on the photo features that are available in CyberLink PowerDVD.

Music in the Media Library

Click on the Music tab to play back the music that is in your media library. You can also view album art for your music collection and create music playlists for playback. The audio that is in the music library does not have to be just music. It can be any type of supported audio that you want to play back in CyberLink PowerDVD. See Browsing Through Music for more information.
See Playing Music for information on the music playback features that are available in CyberLink PowerDVD.
Chapter 3:

PowerDVD Workspace

This chapter outlines the CyberLink PowerDVD program workspace and its available features.

When you launch the program it displays as follows:

A - Media Panel, B - Media Window, C - Search for Media, D - Configure PowerDVD Settings, E - Switch to Cinema Mode, F - Media Window View, G - Playback Controls

Media Panel

The media panel is where you can play back movies discs and access all the imported photos, video clips, movie files, TV shows, and music in the CyberLink PowerDVD media library. The media panel also lets you watch online videos (YouTube and Vimeo), play media on portable devices and media servers* on your home network, create media playlists, access CyberLink Cloud*, and much more.
Media Library

The Media Library tab of the media panel provides access to all of the media you have imported into the media library and is where you can play back movie discs.

See PowerDVD Media Library for more detailed information.

CyberLink Cloud

Click on the CyberLink Cloud* tab to view the media stored on the cloud service from CyberLink. You can use CyberLink Cloud to back up your media so you can access it anywhere, or to access the media that you uploaded via a portable device running CyberLink Power Media Player.

Note: * this feature is not available in some versions of CyberLink PowerDVD.

The media on CyberLink Cloud can be streamed or downloaded to your computer for playback in CyberLink PowerDVD. See Utilizing CyberLink Cloud for more information about this feature.

My Computer

Click on the My Computer tab to view all of the folders on your computer's hard drive, and any connected USB devices, network drives, and more. This tab mirrors the view seen when you click on Computer in Windows Explorer, and lets you access and play back any media that you did not import into the media library.

Note: you cannot share any of the folders or media on this tab on a network or with mobile devices. To share them, you must add them to the media library. See Importing Media into the Media Library for more information.

Playlists

On the Playlists tab of CyberLink PowerDVD you can create media playlists that contain music, videos, and photos. See Creating Media Playlists for more information.
Online Video

The Online Video* tab of the media panel lets you watch videos on YouTube and Vimeo, without leaving the program interface.

*Note: *this feature is not available in some versions of CyberLink PowerDVD.

See Playing Online Videos for more information about using this feature.

Devices & Home Media (DLNA)

On the Devices & Home Media (DLNA) tab of CyberLink PowerDVD, you can access and play back media that is on any device or DLNA media server that is connected to a home Wi-Fi network. You can also sync all the media in the media library to an Android device that is connected via a USB cable.

See Playing Media Shared on a Device/Home Media (DLNA) Network for more information on playing back shared media on a network, or Syncing Media to Devices to learn more about syncing media to connected Android devices.

Media Window

The media window of CyberLink PowerDVD is where you view all of the media folders, files, and watch content during playback. Just select a tab in the media panel to display media files and folders in the media window.

*Note: when browsing through and viewing media in the media window, CyberLink PowerDVD will remember your place for you when you close the program. The next time you launch CyberLink PowerDVD, you will be brought back to the last media you were viewing for your added convenience.

Browsing Through Movies in the Movie Library

When browsing through the movie files in the Movies/TV tab's Movie Library section of the media library, you can view their movie cover art, rating information, and more. Click the down arrow in the top right of the window to filter the movies by 10 Recently Played Movies or Movies Not Watched Yet if required.
**Note:** use the zoom slider on the playback controls to use Instant Scale to dynamically resize the movie cover art to a desired size. If you are not seeing the latest movie files in the media library, just click 🔄 to refresh.

As you browse through the library, note the icons next to each of the movie files. Their meanings are as follows:

- □ - indicates the movie has not yet been watched.
- □ - indicates the movie was partly watched, but not to the end.
- □ - indicates the movie was previously watched.

If a movie file is not displaying the cover art, you can insert an image file (in the JPG or PNG format) in the movie file's folder and name it “folder” to use it as the cover art. You can also right-click on the movie file and then select Set Cover Art. In the Select Image dialog, browse to and then select an image on your computer's hard drive to use as the cover art.

**Note:** if the cover art for a movie file in the library is incorrect, you can right click on it and select **Hide Online Info** to remove it and the related movie information.

Right-click on a movie file thumbnail in the media window and then select **Locate on Disk** to view the folder where the file is located in Windows Explorer. If you'd like to remove a movie file from the media library (and from your computer's hard drive), just right click on it and select **Delete from Disk**.

## Browsing Through TV Shows

When you go through the content in the TV Shows section of the media library, you can view their cover art, rating information, and more.

**Note:** use the zoom slider on the playback controls to use Instant Scale to dynamically resize the TV show cover art to a desired size. If you are not seeing the latest TV shows in the media library, just click 🔄 to refresh.

CyberLink PowerDVD automatically organizes TV shows by show, season, and episode for easy browsing. If you find that the TV shows are not displaying correctly, you may need to update the file and folder names. See [Organizing TV Shows](#) for more information.

As you browse through the library, note the icons next to each of the TV show episodes. Their meanings are as follows:

- □ - indicates the episode has not yet been watched.
- indicates the episode was partly watched, but not to the end.
- indicates the episode was previously watched.

If a TV show is not displaying the cover art, you can insert an image file (in the JPG or PNG format) in the TV show's folder and name it “folder” to use it as the cover art. You can also right click on the TV show and then select Set Cover Art. In the Select Image dialog, browse to and then select an image on your computer's hard drive to use as the cover art.

**Note:** if the cover art for a TV show in the library is incorrect, you can right click on it and select Hide Online Info to remove it and the related TV show information.

Right-click on a TV show thumbnail in the media window and then select Locate on Disk to view the folder where the file is located in Windows Explorer.

### Browsing Through Photo/Video Folders

You can browse through photos and videos in the media window in one of three views. To change the view, just click the down arrow in the top right of the window and select the one you want to use.

**Note:** if you are not seeing the latest photos and video files in the media library, just click to refresh.

- **List view:** displays photos, videos, and their folders in a list, which is easily sortable by clicking on the list headings.
- **Folder view:** displays photos, videos, and their folders as thumbnails, which can be resized.
- **Calendar view:** displays photos and videos in a calendar. Providing a timeline for your media, just double click on a date to view all the photos and videos that were shot on that day.

**Note:** use the zoom slider on the playback controls or Gesture Controls to change the calendar view to show more than one month, or click on a year at the top of the window to view media from a different year. Click to view any media that was created on today's date.

When browsing through the media folders on the Photos and Videos tabs in folder view, you can hover your mouse over a folder thumbnail to use Instant View to preview all the media inside by dragging the slider that appears.
To view the photos or videos in a folder, just double-click on it (or right click on it for more options).

Note: when viewing a single photo, click to view the instant photo thumbnails for all the photos in the current folder.
To play videos, or to view the photos in a folder in a slideshow, just select them in the media window and then click the play button.

*Note: when browsing through photos and videos in a folder, right click on one and then select Set as Cover to set it as the thumbnail cover image for its folder.*

Right-click on a video or photo thumbnail in the media window and then select **Locate on Disk** to view the folder where the file is located in Windows Explorer. If you’d like to remove a media file from the media library (but not from your computer’s hard drive), just right click on it and select **Remove from Library**. Click **Delete from Disk** if you want to remove it from the library and delete it from your computer’s hard drive.

*Note: use the zoom slider on the playback controls to use Instant Scale to dynamically resize the folder and media thumbnails to a desired size.*

For more information on playing videos and photo slideshows, see [Playing Media in PowerDVD](#).

**Extracting Audio from Video Clips**

You can extract just the audio track of a video clip and import it into the media library. To extract audio from a video clip, do this:

1. Click on the **Videos** tab the media library.
2. Right-click on the video clip you want to extract the audio from, and then select **Extract Audio**.
3. In the Extract Audio dialog, enter a **Title**, or name for the audio file that will be created. If required, you can also modify the **Artist**, **Album**, and **Genre** fields.

   *Note: you can also add album art for the extracted audio by clicking on the album art box and then browsing to and locating an image on your hard drive to use it as the album art.*

4. Click the **More Settings** button to configure the extract audio settings as follows:

   - **Destination directory**: set the folder on your computer where the extracted audio will be stored by clicking the **Change** button and selecting the new folder.
Note: if you select a folder that it is not in the media library, CyberLink PowerDVD will auto add the folder and the extracted audio into the media library for you.

- **Format**: select the preferred audio file format of the extracted audio.
- **Bitrate**: set the quality of the extracted audio files.

Click **OK** to close the More Settings dialog.

5. Click the **Extract** button to extract the audio and import it into the media library.

### Browsing Through Music

On the **Music** tab, CyberLink PowerDVD automatically loads and displays the album art for all music that is imported into the media library, if available.

**Note**: use the zoom slider on the playback controls to use Instant Scale to dynamically resize the album cover art to a desired size. If you are not seeing the latest music in the media library, just click to refresh.

You can also click to view the music by the recording artist, or to view all of the individual songs in the media library. Click to return to album view.

Right-click on an album, artist, or song in the media window and then select **Locate on Disk** to view the folder where the music files are located in Windows Explorer. If you'd like to remove music from the media library (but not from your computer's hard drive), just right-click on it and select **Remove from Library**. Click **Delete from Disk** if you want to remove music from the library and delete it from your computer's hard drive.

To view the songs in an album or for an artist, just double-click on it (or right-click on it for more options). To play a song, just select it in the media window and then click the play button. For more information on playing music files and other audio, see **Playing Music**.

### Editing Tags

If some music is not displaying the album art or is displayed as "Unknown Artist", just right click on it and select **Edit Tags** to fix it.
Note: you can edit the tags for each song one at a time, or for an entire album by selecting multiple music files.

In the Edit Tags dialog you can modify the **Artist**, **Album**, and **Genre** fields if required. For the album art, just click on the album art box and then browse to and locate an image on your hard drive to use it as the album art. Click **Save** to update the information in the music library.

*Note: the edit music tags feature is supported for AAC, MP3, FLAC audio files only.*

**Searching for Media**

If you are looking for specific media in the PowerDVD media library, you can use the search function to find it.

To search for media, do this:

1. Enter in a keyword in the search field located in the top right of the media window.

2. CyberLink PowerDVD filters the media in the media window based on the keywords entered.

*Note: click ✗ to clear the search results and display all the media in the window.*

**Rating Media**

When browsing though the media in the PowerDVD media library you can rate each media file by assigning it a rating from 1 and 5 stars.

To rate media, do this:

1. Select the media file in the PowerDVD media library you want to rate.

2. To rate it, do any of the following:

   • when watching a movie file, click stop to view the current rating for that movie. Rate the movie by hovering your mouse over the desired star and then selecting it.
right click on a video, photo, or music (song) file, select **Rate**, and then the star rating you want to set.

in the Rating column, hover your mouse over the rating you want to apply to the media file, and then click on the star rating to set it.

*Note: you can only see the Rating column for videos and photos if you are in list view. For music, you can see the Rating column when viewing all the songs in an album or for an artist.*

**Setting 3D Source Format**

When 3D* videos and photos are imported into the PowerDVD media library, you may need to change the format of the 3D source video. This is because 3D media comes in a variety of different video source formats. CyberLink PowerDVD needs to know the source format of each 3D media file so that it can display it properly in 3D.

*Note: *this feature is not available in some versions of CyberLink PowerDVD.*

To set the 3D source format of your 3D media in the media window, do this:

1. Right-click on the 3D video file or photo in the PowerDVD media library.
2. Select **Change 3D Format**.
3. Change the 3D source format by selecting one of the following:

- **Auto Detect**: if you are not sure what the source format is of your 3D media, select this item to have CyberLink PowerDVD automatically detect and set it for you.

- **Side by Side Format**: select this option if the 3D content has two different images side by side. CyberLink PowerDVD merges the two images to produce the 3D effect.

- **Over/Under Format**: select this option if the 3D content has two different images, one on top of the other. CyberLink PowerDVD merges the two images to produce the 3D effect.
PowerDVD Modes

CyberLink PowerDVD has three different modes available for playing back your media content: Classic mode, Mini Player mode, and Cinema mode*.

* Note: *this feature is not available in some versions of CyberLink PowerDVD.

Classic mode

Classic mode is the main mode of CyberLink PowerDVD and contains all of the features listed in this document.

Mini Player mode

Mini Player mode is for playing the music in your media library and music playlists. See Playing Music in Mini Player Mode for more information.

Cinema mode

Cinema mode is for users who wish to view movies at a distance (10 foot) with a remote control, or utilize touch screen playback on the latest generation of Ultrabooks. To switch to Cinema mode, click the button on the title bar. Cinema mode is a simplified version of CyberLink PowerDVD and has less features than Classic mode.

CyberLink PowerDVD’s Cinema mode also comes fully integrated in Windows Media Center when both are installed on your computer. The CyberLink PowerDVD shortcut is found in the TV + Movies section of Windows Media Center.

* Note: see the help file within the Cinema mode of CyberLink PowerDVD for a detailed description of its functions and features.
**PowerDVD Settings**

Click on 🛠️ at any time to configure the player settings and preferences of CyberLink PowerDVD. For a complete list of all the available options and features you can customize, see both PowerDVD Settings - Player Settings and PowerDVD Settings - Preferences.

**Playback Controls**

The CyberLink PowerDVD playback controls provide effortless navigation of discs and media files in the media library, and quick access to all of the program’s playback features. You can also use the controls to share the media in the library.

See Playback Controls for a detailed description of all the available controls you can use with your media, and Sharing Media for information on sharing media on YouTube, Vimeo, Facebook, Flickr, or on a network.
Chapter 4:

**Playing Media in PowerDVD**

CyberLink PowerDVD supports the playback of a variety of different media. From high definition content and DVDs, to movie files and TV shows, home videos, audio CDs, photo slideshows, and music, CyberLink PowerDVD provides you with the complete digital media playback experience.

**Playing Movie Discs**

When you insert a video disc into your disc drive, CyberLink PowerDVD plays it automatically. If there is a disc already in your disc drive when you opened CyberLink PowerDVD, do this:

1. Click on the **Movies/TV** tab, and then ![disc icon].
2. Click the play button.

   **Note:** see *Movie Disc Controls* for a list and description of the controls available during movie playback.

**Auto-Resume**

If you stop or close CyberLink PowerDVD during DVD disc playback, and even play other media or discs afterwards, the next time you play that specific disc title, you may resume playback from the last viewed scene.

   **Note:** the auto-resume feature is not available for Blu-ray Disc playback.

The auto-resume feature remembers exactly where you left off the last time you watched the disc. It includes the following options:

- select **Resume** to continue from the point where you previously stopped watching.
- select **Restart** to watch the disc from the beginning.
If you don't want CyberLink PowerDVD to prompt you every time a disc is inserted, you can disable the auto-resume function in settings. See the Auto-Resume setting section of General Settings for more information.

**Supported Disc Formats**

The optical disc formats that CyberLink PowerDVD supports are listed below:

<table>
<thead>
<tr>
<th>Optical Disc Types</th>
<th>File Formats</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blu-ray Discs*/Blu-ray 3D** Discs</td>
<td>BDAV, BDMV</td>
</tr>
<tr>
<td>DVD</td>
<td>DVD-Video, AVCHD*, AVCREC*, DVD-VR, DVD+VR</td>
</tr>
<tr>
<td>CD</td>
<td>VCD, SVCD</td>
</tr>
</tbody>
</table>

*Note: this feature is not available in some versions of CyberLink PowerDVD. **If your version of CyberLink PowerDVD supports Blu-ray 3D playback, you may have to enable playback in settings. See the Miscellaneous section of More Blu-ray Disc Settings for information on enabling it.*

**Accessing Disc Menus in PowerDVD**

When playing discs with CyberLink PowerDVD you can access the disc menus in a variety of ways. Whether it is the title, root, chapter, or audio menu, you can easily access them from anywhere within the program during playback.

CyberLink PowerDVD also provides access to pop-up menus for Blu-ray Discs*, as well as for menus on DVD-VR discs.

*Note: this feature is not available in some versions of CyberLink PowerDVD.*

**Menus on Commercial Discs**

During the playback of most commercial discs, you can access the Title Menu, Root Menu (for special features), Subtitles Menu, Audio Menu, Angle Menu, or the Chapter Menu from various locations.
Note: some disc titles will not allow you to select menus other than the Root Menu. Users will need to access the settings from within the Root Menu if this is the case.

To access these menu items:

- click on in the playback controls during DVD playback and then select either Title Menu or Root Menu.

- click on in the playback controls during playback and then choose Select Menu. The available disc menus are dependent on how the disc was authored.

- right-click on the media window during playback to access the express menu, and then choose Select Menu.

Note: when you enter the disc menu during disc playback and you are done selecting the desired options, right-click on the media window and then select Resume to return to the point where you left off. Note that this resume from menu function is not available if you stopped playback.

Pop-up Menu for Blu-ray Discs

Most Blu-ray Disc* titles have a pop-up menu that provides quick access to scene selection and other features during playback.

Note: * this feature is not available in some versions of CyberLink PowerDVD.

If there is a pop-up menu available for the Blu-ray Disc title you are watching, you can access it by doing one of the following:

- during playback, click the button on the playback controls.

- during playback, press the M key on your keyboard.

Blu-ray Disc Mouse Solution

Some Blu-ray Disc titles do not allow you to use a mouse to navigate through the pop-up menu. If this is the case when you are playing a Blu-ray Disc in CyberLink PowerDVD, click during disc playback to open the More Functions dialog, and then use the navigation controls to navigate through the pop-up menu.
Using the Menus in DVD-VR Format

You can use the Program Set Viewer to access and navigate the menus for discs in the DVD-VR video format.

1. Click on the playback controls.
2. Select Program Set Viewer to visually view the first frame of every title/chapter.
3. Click on the thumbnail that represents the title/chapter in order to begin playback or click Close to exit the viewer.

Note: if playlists are available, they are available for selection here too.

Playing Movie Files and TV Shows

Click on the Movies/TV tab, and then to play back the movie files in the media library, or to play the TV shows. Movie files are DVD/Blu-ray Disc* folders, and individual video files (movie files you recorded with a PVR) that are saved on your computer's hard drive. TV shows are videos you recorded with a PVR.

Note: see Video Playback Controls for a list and description of the controls and playback features available during movie file and TV show playback.

Auto-Resume

If you stop or close CyberLink PowerDVD when playing movie files or TV shows in the media library, the next time you play that specific video file, you may resume playback from the last viewed scene.

Note: the auto-resume feature is also available for DVD files on the hard drive if an IFO file is present and they are in the media library.

The auto-resume feature remembers exactly where you left off the last time you
watched the movie file/TV show. It includes the following options:

- select **Resume** to continue from the point where you previously stopped watching.
- select **Restart** to watch the movie file/TV show from the beginning.

**Supported Movie File/TV Show Formats**

In CyberLink PowerDVD you can play back movie files/TV shows in the following formats:

**Movie file formats**: 264, 265*, 26L, 3G2, 3GP, 3GP2, 3GPP, ASF, AVC, AVI, BSF*, DIV, DIVX*, DVR-MS, FLV, H264, H265*, HEVC*, JSV, JVT, M1V, M2P, M2T, M2TS, M2V, M4V, MK3D*, MKV, MOD, MOV, MP4, MP4V, MPE, MPEG, MPG, MPV, MTS, MVC*, QT, TOD, TP, TPD, TRP, TS, TTS, VC1*, VOB, VRO, WM, WMV, WTV.

*Note*: this feature is not available in some versions of CyberLink PowerDVD.

**Playing Movie Files in PowerDVD**

You can play back movie files by doing any of the following:

- drag and drop a movie file directly onto the CyberLink PowerDVD user interface or the PowerDVD desktop icon.
- to play a movie file in your media library, click **Movies/TV** in the media panel, and then . Browse to the folder that contains your movie files, and then double-click on a movie file to begin playback.
- if you want to play a DVD/Blu-ray folder that is not in the media library, click browse to and select the folder, and then click the play button.
- to play a movie file on your hard drive, click the **My Computer** tab in the media panel, and then browse to the folder that contains your movie file. Double-click on a movie file to begin playback.
- if CyberLink PowerDVD is set as the default player for a movie file on your computer (see **File Association** for more information), you can also just double-click on a file in Windows Explorer to play it back.
Playing TV Shows in PowerDVD

You can play back TV shows by doing any of the following:

- drag and drop a TV show directly onto the CyberLink PowerDVD user interface or the PowerDVD desktop icon.
- to play a TV show in your media library, click **Movies/TV** in the media panel, and then **.**. Browse to the folder that contains your TV shows, and then double-click on a TV show to begin playback.
- to play a TV show on your hard drive, click the **My Computer** tab in the media panel, and then browse to the folder that contains your TV show. Double-click on a TV show to begin playback.
- if CyberLink PowerDVD is set as the default player for a TV show on your computer (see **File Association** for more information), you can also just double-click on a file in Windows Explorer to play it back.

**Note:** you can also play TV shows that are on a network (UPnP/DLNA/DTCP-IP) media server. See **Playing Media Shared on a Device or Home Media (DLNA) Network** for more information on playing media on a network.

Playing Videos

Click on the **Videos** section of the media panel in CyberLink PowerDVD to play back video files in the media library.

**Note:** see **Video Playback Controls** for a list and description of the controls and playback features available during video file playback.

Supported Video Formats

In CyberLink PowerDVD you can play back videos in the following file formats:

**Video formats:** 264, 265*, 26L, 3G2, 3GP, 3GP2, 3GPP, ASF, AVC, AVI, BSF*, DIV, DIVX*, DVR-MS, FLV, H264, H265*, HEVC*, JSV, JVT, M1V, M2P, M2T, M2TS, M2V, M4V, MK3D*, MKV, MOD, MOV, MP4, MP4V, MPE, MPEG, MPG, MPV, MTS, MVC*, QT, TOD,
Playing Media in PowerDVD

TP, TPD, TRP, TS, TTS, VC1*, VOB, VRO, WM, WMV, WTV.

Note: * this feature is not available in some versions of CyberLink PowerDVD.

Playing Videos in PowerDVD

You can play back videos files by doing any of the following:

- drag and drop a video file directly onto the CyberLink PowerDVD user interface or the PowerDVD desktop icon.

- to play a video file in your media library, select Videos in the media panel, and then browse to the folder that contains your videos. Double-click on a video file to begin playback.

- to play a video file on your hard drive, click the My Computer tab in the media panel, and then browse to the folder that contains your video file. Double-click on a video file to begin playback.

- if CyberLink PowerDVD is set as the default player for a video file on your computer (see File Association for more information), you can also just double-click on a file in Windows Explorer to play it back.

Note: you can also play video files that are on a network (UPnP/DLNA/DTCP-IP) media server. See Playing Media Shared on a Device or Home Media (DLNA) Network for more information on playing media on a network.

Viewing Photos

Click on the Photos section of the media panel to view the photos in your media library and play them in a slideshow.

Note: see Photo Controls for a list and description of the controls and playback features available when viewing photos and playing slideshows.

Supported Photo Formats

In CyberLink PowerDVD you can view photos in the following photo file formats:

Photo formats: ARW, BMP, CR2, CRW, DCR, DNG, ERF, JPEG, JPG, JPS*, KDC, MEF, MPO*, MRW, NEF, ORF, PEF, PNG, RAF, RAW, RW2, SR2, SRF, TIF, TIFF, X3F.
Playing Photo Slideshows

To play back your photos in a slideshow, do one of the following:

- **Note**: if you are already playing music in CyberLink PowerDVD, it continues to play while you view photos and play slideshows.

  - drag and drop photos directly onto the CyberLink PowerDVD user interface or the PowerDVD desktop icon, and then click the play button.
  
  - to play a slideshow with photos in your media library, select **Photos** in the media panel, and then browse to the folder that contains your photos. Select a photo and then click the play button to play a slideshow with all the photos in the folder.
  
  - to play a slideshow with photos on your hard drive, click the **My Computer** tab in the media panel, and then browse to the folder that contains your photos. Select a photo and then click the play button to play a slideshow with all the photos in the folder.

  **Note**: you can also play a slideshow with photos that are on a network (UPnP/DLNA/DTCP-IP) media server. See Playing Media Shared on a Device or Home Media (DLNA) Network for more information on playing media on a network.

Playing Music

Click on the **Music** section of CyberLink PowerDVD to play audio CDs and files in the media library.

**Note**: see Music Controls for a list and description of the controls and playback features available during music playback. You can also play music in the mini player. See Playing Music in Mini Player Mode for more information.
Supported Audio Formats

In CyberLink PowerDVD you can play back audio in the following audio formats:

<table>
<thead>
<tr>
<th>Optical Disc Types</th>
<th>File Formats</th>
</tr>
</thead>
<tbody>
<tr>
<td>CD</td>
<td>Audio, Karaoke</td>
</tr>
</tbody>
</table>

Audio file formats: AAC, AC3, ADTS, AOB, APE, DTS, FLAC, M4A, MID, MKA, MP2, MP3, MPA, OGG, RMI, WAV, WMA.

Playing Audio Discs and Music in the Library

To play back audio in CyberLink PowerDVD, do one of the following:

Note: when you play music in CyberLink PowerDVD, it continues to play if you view photos and play slideshows, and browse through media on the other tabs. Playback stops if you start movie file, video, or movie disc playback.

- insert an audio CD into your disc drive and CyberLink PowerDVD will play it automatically. If there is a disc already in your disc drive when you opened CyberLink PowerDVD, click the My Computer tab in the media panel, browse to and select the disc drive, and then click play to begin playback.

  Note: you can rip the audio on CD to your computer's hard drive using CyberLink PowerDVD. See Ripping Audio from a CD for more information.

- drag and drop audio files directly onto the CyberLink PowerDVD user interface.

- to play an audio file in your media library, select Music in the media panel, and then browse to the folder that contains your audio. Double-click on an audio file to begin playback.

- to play audio files on your hard drive, click the My Computer tab in the media panel, and then browse to the folder that contains your audio files. Double-click on an audio file to begin playback.

  Note: you can also play audio files that are on a network (UPnP/DLNA/DTCP-IP) media server. See Playing Media Shared on a Device or Home Media (DLNA) Network for more information on playing media on a network.
Ripping Audio from a CD

In CyberLink PowerDVD you can rip the audio from an audio CD. To rip an audio CD using CyberLink PowerDVD, do this:

1. Place the audio CD in the disc tray and then close it.
2. If required, select **Music** in the media panel to display the tracks on the CD.
3. Click the **Rip CD** button.
4. In the Rip CD dialog, ensure that the artist and album information is correct. You can modify the **Artist**, **Album**, and **Genre** fields if required.
   
   **Note:** if the album art is not displayed, just click on the album art box and then browse to and locate an image on your hard drive to use it as the album art.

5. Select the tracks that you want to rip from the audio CD by ensuring the check box next to the track name is selected.
6. Click the **More Settings** button to configure the rip audio settings as follows:

   - **Destination directory:** set the folder on your computer where the ripped audio will be stored by clicking the **Change** button and selecting the new folder.

   **Note:** if you select a folder that is not in media library, CyberLink PowerDVD will auto add the folder and the ripped audio into the media library for you.

   - **Format:** select the preferred audio file format of the ripped audio.

   - **Bitrate:** set the quality of the ripped audio files.

   Click **OK** to close the More Settings dialog.

7. Click the **Rip** button to rip the audio from CD and import it into the media library.
Playing a Karaoke Disc

You can use CyberLink PowerDVD to play back Karaoke DVDs or VCDs. Be sure to look for the Karaoke Logo on the DVD/VCD title package before starting playback.

Selecting Karaoke Options

1. Upon inserting your karaoke disc, be sure your microphone is properly connected.
2. Click the play button to display the menu screen.
3. Click ⭐️ and then select More Functions to use the navigation buttons on the menu pad or choose a song by clicking on it with your mouse.
4. During playback, click the 🎤 button within More Functions or right-click to call the Express Menu and select Karaoke.
5. Select from dual vocal channels on (Both Channels), either Left Channel or Right Channel.
6. If playing a karaoke VCD, select the desired audio channel for the voice and music mixing in the Express Menu.

Adjust Pitch

You can adjust the pitch of your karaoke titles using the Adjust Pitch function.

To adjust pitch, do the following:

1. Right click on the 🎤 button within More Functions.
2. Select Adjust Pitch and then make your selection.

Playing Media Stored on CyberLink Cloud

You can play the media that you have stored on CyberLink Cloud* with CyberLink PowerDVD.
Note: * this feature is not available in some versions of CyberLink PowerDVD. Users for selected versions of CyberLink PowerDVD do get a free 1 year subscription to the CyberLink Cloud service.

For more information on CyberLink Cloud and how you can upload your media to it, see Utilizing CyberLink Cloud.

**CyberLink Cloud Media**

CyberLink Cloud contains media that you uploaded using a portable device, or transferred from your computer using CyberLink PowerDVD. This media is playable on a portable device using CyberLink Power Media Player, and on your computer using the desktop version of CyberLink PowerDVD.

Click on the **CyberLink Cloud** tab to view and play the media that you previously uploaded to the Videos, Photos, and Music folders on CyberLink Cloud. For information on uploading media from your computer to CyberLink Cloud, see Uploading Media to CyberLink Cloud.

**Videos**

Click on **Videos** to view all the video files that were uploaded to CyberLink Cloud. Click to view the videos by folders, or to view the uploaded video playlists. If you want to view the video files that were uploaded by a portable device, just double click on the **Mobile Upload** folder.

*Note: when playing back videos that are stored on CyberLink Cloud, the videos are streamed from the server if the source video is in the following file formats: MP4, M2TS, MTS, TS, MKV, MPG.*

**Photos**

You can view the photos that on your CyberLink Cloud by clicking on **Photos**. Click to view the photos by folders, or to view the uploaded photo slideshow playlists. Double click on the **Mobile Upload** folder to view the photos you uploaded from a portable device.

Right click on any of the photos stored on CyberLink Cloud and select **Share Link** if you want to share a photo with family and friends. CyberLink PowerDVD copies a link (that is viewable to anyone) on your clipboard. Just paste this link in e-mails,
social media sites, etc. to share the photo.

**Music**

The music you uploaded to CyberLink Cloud is viewable when you click on **Music**. If you want to view all the music by song title, just click 🎵. You can also view the music by artist 🎧, album 📜, or click 🎭 to view by the playlists you created and uploaded.

**Playing CyberLink Cloud Media**

To play a media file that is on CyberLink Cloud, do this:

*Note: when playing media that is stored on CyberLink Cloud, the playback controls that are available depend on the type of media you are playing. See Playback Controls for a description of the available controls and playback features for each media type.*

1. Click on the **CyberLink Cloud** tab in the media panel.
2. Select either **Videos**, **Photos**, or **Music**, and then browse to the media file or playlist that you want to play.
3. Double-click on the media file to begin playback. To play multiple files, select each of them and then click the play button.

*Note: if may take a few moments before the playback of media begins, as CyberLink PowerDVD must download most media files from the CyberLink Cloud server before playback. When playing videos (in the MP4, M2TS, MTS, TS, MKV, or MPG format), CyberLink PowerDVD streams the video from the CyberLink Cloud server.*

**Downloading Media from CyberLink Cloud**

You can download the media that is stored on CyberLink Cloud to your computer.

*Note: you can set the folders on your computer where the media is downloaded to in CyberLink Cloud Settings.*

To download media from CyberLink Cloud, do this:
1. Click on the CyberLink Cloud tab, and then the type of media you want to download (Videos, Photos, Music).

2. Select a media folder, or the individual media files in the folder, that you want to download.

3. Click on the button in the bottom right corner of the CyberLink PowerDVD window to start downloading the selected folders/files.

4. Click OK once the download is complete.

Creating Media Playlists

In the Playlists section of CyberLink PowerDVD you can create a playlist that contains your music, videos, and photos. You can also add media that is not in your media library to your playlists, by dragging and dropping folders and files from the My Computer tab or from Windows File Explorer.

Note: you can add music, videos, and photos all in the same media playlist, but you cannot add tracks from an audio CD.

To create a custom media playlist, do this:

1. On the Playlists tab of the media panel, click on New Playlist.

2. Enter a Name for the new playlist in the field provided, and then click OK.

3. Browse to the media that you want to add to the playlist. Note that you can add folders and files from the My Computer tab or from Windows File Explorer directly as well.

4. To add media to the playlist, just drag and drop it on the playlist name in the Playlists section of the media panel. You can also right click on a media file in the media library, select Add to, and then the playlist name to include it in the playlist.

Note: hover your mouse over the Playlists section and then click to export the playlist you created or import other playlists you created previously in the PLS and M3U formats. Select a playlist and then click to delete it from the list.

5. If required, you can drag and drop the media in your created playlist to new positions in the playlist to change the playback order.
Smart Playlists

CyberLink PowerDVD also auto creates smart playlists with the media in your PowerDVD media library. Smart playlists are like any other playlists, and are always available on the Playlists section.

The smart playlists in CyberLink PowerDVD include:

- **Top Rated**: is a playlist made up of all the highest rated media in the library. See Rating Media for more information on rating media.

- **Recently Played**: is a playlist made up of the most recently played videos, music, and photos.

- **Recently Added**: is a playlist made up of all the media that was most recently imported in the PowerDVD media library.

Playing Back Media Playlists

Media playlists can contain three types of media: music, videos, and photos. To play back media in a playlist, do this

1. Select the playlist you want to play in the media panel and then click the play button.

2. CyberLink PowerDVD will play all the files in the playlist.

3. Use the available buttons to control the playback of the playlist. See Playback Controls for detailed information on the available controls.

Playing Online Videos

In CyberLink PowerDVD you can watch videos on YouTube and Vimeo, without leaving the program. Select the Online Video tab to begin watching videos on these social media web sites.

Watching Videos on YouTube

You can watch YouTube videos directly from within the Videos tab of CyberLink PowerDVD.

To watch videos on YouTube, do this:

1. Select Online Video section of the media panel and then YouTube.
Note: if required, hover your mouse over the YouTube section, and then click on to sign in to your account on YouTube so you can view your subscriptions, favorites, and any videos you have uploaded.

2. Use the drop-down menu in the top left of the media window to filter the videos from YouTube.

3. Select a video and then click the play button to begin playing it back. See Video Playback Controls for a description of the available playback controls when playing YouTube videos.

4. When watching videos on YouTube, you can set the quality of the video. To do this, select the quality of the streamed video from the YouTube quality menu to the left of the playback controls.

   Note: the quality options that are available is dependent on those available from YouTube.

**Pinning YouTube Videos**

When browsing through the videos available on the tabs in the YouTube section, you can pin the videos that you want to watch later. These pinned videos can be played when you are not connected to the Internet.

To pin a YouTube video, do this:

1. In the media window browse to the YouTube video that you want to pin.

2. Do either of the following:
   - hover your mouse over the video thumbnail and then click .
   - right-click on the video thumbnail and then select Pin.

3. In the dialog that displays, click OK.

**Playing Pinned YouTube Videos**

To play back videos that you previously pinned, select Online Video, YouTube, and then select from the drop-down. Select the video you want to play, and then click the play button. See Video Playback Controls for a description of the available playback controls when playing YouTube videos.
Extracting Audio from Pinned YouTube Videos

You can extract just the audio track from a pinned YouTube video and import it into the media library. To extract audio from a pinned YouTube video, do this:

1. Select **Online Video, YouTube**, and then select from the drop-down.
2. Right-click on the video you want to extract the audio from, and then select **Extract Audio**.
3. In the Extract Audio dialog, enter a **Title**, or name for the audio file that will be created. If required, you can also modify the **Artist**, **Album**, and **Genre** fields.

   **Note**: you can also add album art for the extract audio by double clicking on the album art box and then browsing to and locating an image on your hard drive to use it as the album art.

4. Click the **More Settings** button to configure the extract audio settings as follows:

   - **Destination directory**: set the folder on your computer where the extracted audio will be stored by clicking the **Change** button and selecting the new folder.

      **Note**: if you select a folder that it is not in the media library, CyberLink PowerDVD will auto add the folder and the extracted audio into the media library for you.

   - **Format**: select the preferred audio file format of the extracted audio.

   - **Bitrate**: set the quality of the extracted audio files.

      Click **OK** to close the More Settings dialog.

5. Click the **Extract** button to extract the audio and import it into the media library.
Watching Videos on Vimeo

You can watch Vimeo videos directly from within the Videos tab of CyberLink PowerDVD.

To watch videos on Vimeo, do this:

1. Select the Vimeo section of the media panel, and then sign in to your account so you can view your videos, likes, and more.
   
   **Note:** you must have a Vimeo account to watch videos. If you don’t have one, click the Sign up to Vimeo link in the Vimeo Account Authentication window.

2. Use the tabs at the top of the media window to filter the videos from Vimeo.

3. Select a video and then click the play button to begin playing it back. See Video Playback Controls for a description of the available playback controls when playing Vimeo videos.

4. When watching videos on Vimeo, you can set the quality of the video. To do this, select the quality of the streamed video from the Vimeo quality menu to the left of the playback controls.

   **Note:** the quality options that are available is dependent on those available from Vimeo and for your Vimeo account.

Playing Media Shared on a Device/Home Media (DLNA) Network

In CyberLink PowerDVD you can play videos, listen to music, and view photos that are shared on network (UPnP, DLNA, DTCP-IP) media servers* or devices that have Power Media Player or PowerDVD Remote installed.

**Note:** when playing shared media on a network or device, the playback controls that are available depend on the type of media you are playing. See Playback Controls for a description of the available controls and playback features for each media type. * this feature is not available in some versions of CyberLink PowerDVD.
Setting Up CyberLink Apps on Your Devices

There are two apps from CyberLink you can use to access and play media on your devices:

- **Power Media Player**: compatible with Windows, Android, and iOS devices, Power Media Player lets you access the media on these devices for playback in CyberLink PowerDVD on your computer. Power Media Player will also play media shared in CyberLink PowerDVD when connected to the same Wi-Fi network.

- **PowerDVD Remote**: compatible with both Android and iOS smart phones, PowerDVD Remote lets you play media that is on your device. PowerDVD Remote can also be used to control playback of media in CyberLink PowerDVD. See Controlling Playback with PowerDVD Remote for more information.

Setting Up Power Media Player

Power Media Player is a program from CyberLink that runs on Windows, iOS, and Android devices. It lets you wirelessly stream videos, music, and photos from your computer to your device, or access all the media on your PC from your device. Power Media Player* is available in the Windows Store, Apple App Store, or Google Play.

*Note: see the help file within Power Media Player for a detailed list of the available features and descriptions of the program functions. * this feature is not available in some versions of CyberLink PowerDVD.

Before you can access and play media located on a portable device that is running Power Media Player, you must first:

- connect the computer with CyberLink PowerDVD 12/13/14/15 installed to a wireless network.
- connect the portable Windows, iOS, or Android device to the same wireless network.
- download the Power Media Player Bundle Version* app from the online store (Windows Store, Apple App Store, Google Play).
- install the Power Media Player app on your portable device.
on the computer connected to the wireless network, click on the **Devices & Home Media (DLNA)** tab of CyberLink PowerDVD, and then select **Power Media Player**. Enter the serial number** provided on this tab into the device running Power Media Player, to activate Power Media Player.

*Note:* the Power Media Player Bundle Version app is free for users who have purchased the Live and Ultra versions of CyberLink PowerDVD. Those users who have a different version of CyberLink PowerDVD must purchase the Power Media Player app from the online store (Windows Store, Google Play, Apple App Store). **iOS users do not need to enter the serial number to activate the bundle version of Power Media Player.**

## Setting Up PowerDVD Remote

Before you can access and play media located on a smart phone that is running PowerDVD Remote, you must first:

- connect the computer with CyberLink PowerDVD 11/12/13/14/15 installed to a wireless network.
- connect the portable Android or iOS device to the same wireless network.
- download the free PowerDVD Remote app from the online store (Google Play, Apple App Store).
- install the PowerDVD Remote app on your portable device.
- on the computer connected to the wireless network, click on the **Devices & Home Media (DLNA)** tab of CyberLink PowerDVD, and then select **PowerDVD Remote**.
- select the **Allow PowerDVD Remote to connect and control this computer** option.
- find and enter the 4-digit passcode provided on this tab into the device running PowerDVD Remote, so that CyberLink PowerDVD can access the media on it.

*Note: if required, click **Change** to generate a new passcode for the connected device.*
Supported File Formats

CyberLink PowerDVD supports the playback of shared media on a network or mobile device (that was Power Media Player installed) in the following file formats:

**Video:**

264, 26L, 3G2, 3GP, 3GP2, 3GPP, ASF, AVC, AVI, BSF*, DAT, DIV, DIVX, FLV, H264, JSV, JVT, M1V, M2P, M2T, M2TS, M2V, M4V, MKV, MOD, MOV, MP4, MP4V, MPE, MPEG, MPG, MPV, MTS, MVC, QT, TOD, TP, TPD, TRP, TS, TTS, VC1, VOB, VRO, WM, WMV.

**Photo:** BMP, JPEG, JPG, PNG, TIF, TIFF.

**Audio:** AAC*, AC3, ADTS*, AOB*, DTS, LPCM, M4A, MKA, MP2, MP3, MPA, WAV, WMA.

*Note: *this feature is not available in some versions of CyberLink PowerDVD.

PowerDVD Remote Supported Formats

When playing media that is stored on a portable device that has PowerDVD Remote installed, CyberLink PowerDVD can play back media in the following file formats:

<table>
<thead>
<tr>
<th>Device Type</th>
<th>Media Type</th>
<th>File Formats</th>
</tr>
</thead>
<tbody>
<tr>
<td>Android</td>
<td>Audio</td>
<td>AAC, M4A, MID, MP3, OGG, WAV, WMA</td>
</tr>
<tr>
<td>Android</td>

<td>3G2, 3GP, 3GPP, ASF, AVI, FLV, M4V, MKV, MOV, MP4, MPEG, QT, WMV</td>
</tr>
<tr>
<td>Android</td>
<td>Photo</td>
<td>BMP, JPEG, JPG, PNG</td>
</tr>
<tr>
<td>Apple iOS</td>
<td>Video</td>
<td>3GP, 3GPP, MP4, MOV</td>
</tr>
<tr>
<td>Apple iOS</td>
<td>Photo</td>
<td>BMP, JPEG, JPG, PNG</td>
</tr>
</tbody>
</table>
Playing Shared Media

To play a media file that is on a network (UPnP, DLNA, DTCP-IP) media server or a device running Power Media Player* or PowerDVD Remote, do this:

* Note: *this feature is not available in some versions of CyberLink PowerDVD.

1. Click on the Devices & Home Media (DLNA) tab in the media panel.
2. Select the server/device in the list that contains the media you want to play.

* Note: if you are wanting to play media that is on a computer running CyberLink PowerDVD, you must first share the media in the PowerDVD media library. See Sharing Media on a Network for more information.

3. Select the type of media you want to play, and then navigate to the location of the media file on the device.
4. Double-click on the media file to begin playback.

Downloading Shared Media

When streaming media from a network (UPnP, DLNA, DTCP-IP) media server or a device running Power Media Player* or PowerDVD Remote, you can download it to the current computer you are using.

* Note: *this feature is not available in some versions of CyberLink PowerDVD.

To download shared media, do this:

1. Click on the Devices & Home Media (DLNA) tab in the media panel.
2. Select the server/device in the list that contains the media you want to download.

* Note: if you are wanting to download media that is on a computer running CyberLink PowerDVD, you must first share the media in the PowerDVD media library. See Sharing Media on a Network for more information.

3. Select the type of media you want to download, and then navigate to the location of the media file on the device.
4. Select the media file and then click on the button in the bottom right
corner of the CyberLink PowerDVD window.

**Note:** if the download button is hidden, just hover your mouse over the available buttons in the bottom right to display it.

5. In the dialog that opens, click the **Browse** button and then select the location on your computer where you want to save the media.

6. Click **Download** to download it to your computer.

### Streaming Media (Play to)

When browsing through the media files in the PowerDVD media library or on the **My Computer** tab, you can select them and then click 📺 to stream them to a Digital Media Renderer over a DLNA network, or a computer/device running CyberLink PowerDVD or Power Media Player.

**Note:** you may have to give permission on the network computer/device for another computer to control its media player before you can play media on it. To do this on a computer running CyberLink PowerDVD (making it a Digital Media Renderer), select the ➡️ button on the **Devices & Home Media (DLNA)** tab and then ensure **Allow Home Media Controller to Control My Player** is selected.

To stream media, do this:

1. Select all of the media files you want to stream/play.

2. Click the 📺 button to display a list of the (UPnP, DLNA, DTCP-IP) media servers and devices running Power Media Player*.

3. Select the server/device in the list you want to stream/play the media to. CyberLink PowerDVD streams the media and starts playing back the media on the selected server/device.

4. Click ⬅️ to return to the media library.

**Note:** *this feature is not available in some versions of CyberLink PowerDVD.*
Chapter 5:

Playback Controls

The CyberLink PowerDVD playback controls provide effortless navigation of discs and other media, and easy access to all of the program’s playback features.

Depending on the type of media you are playing, and whether media is playing or playback is paused or stopped, the buttons available on the playback controls display differently.

Movie Disc Playback Controls

When playing back a movie disc in the BD/DVD Movie section of the Media Library tab, the playback controls display as follows:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Button</th>
<th>Hotkey</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Elapsed time</td>
<td></td>
<td>Displays the time elapsed for the current movie. Hover your mouse over it to reveal two buttons that let you jump backward and forward in the movie. Click to quickly jump</td>

## Using the Audio Equalizer

During music playback, click 🎵 and then select **Audio Equalizer** to access the equalizer and audio presets you can use to alter the audio in CyberLink PowerDVD.
Select a preset from the Presets drop-down to change the sound of the audio. The preset you should select, depends on the type of audio or genre of music you are playing back. You can also manually adjust the sliders on the equalizer to manually set the audio output to your custom specifications. Once you have manually set the sliders to your liking, click the Save button. You can save up to three custom presets using the Custom Preset 1, 2, and 3 options.

Playing Music in Mini Player Mode

You can play music in the media library in PowerDVD Mini Player mode. This mode makes it easy to listen to music in CyberLink PowerDVD while performing other tasks on your computer.

Note: you can also use the PowerDVD Mini Player mode to play music playlists. Note that if any videos or photos are in a playlist that contains music, then the Mini Player mode is not available.

To access the Mini Player mode during music playback, right click on an empty space in the Music tab’s media window and then select Mini Player. CyberLink PowerDVD will switch to Mini Player mode and display the album art just above the task bar in Windows. Hover your mouse over the album art to display the available
controls in the Mini Player.

You can use the controls to pause/start playback, go to the previous or next song in the folder or playlist, or click \( \text{mute button} \) to mute the music volume. To view the current song and playback information, click in the bottom right corner to expand the Mini Player.

You can click on an empty area of the player and drag it to a new location on your computer’s desktop. Click \( \text{exit button} \) to exit Mini Player mode and return to Classic mode.

**Play Speed Navigator**

When wanting to rewind or fast forward through content on movie discs, in movie files, TV shows, or when playing videos files, you can click the \( \text{rewind button} \) or \( \text{fast forward button} \) to access the Play Speed Navigator for easier control.
Drag the blue control slider left to increase the rewind speed up to 16 times the normal playback speed, or right to increase the forward speed up to 32 times. You can also click $8\leftarrow$ to quickly jump back 8 seconds, or $\rightarrow 30$ to skip forward 30 seconds.

*Note: if you have a touch enabled display, you can also use Gesture Controls to skip forward or backward during movie/video playback.*

Press the space bar on your keyboard to close the control panel and resume normal playback.

**Other UI Controls**

CyberLink PowerDVD also includes the following extra playback features and controls that you may find quite useful during media playback:

- When in Windowed mode, you can click anywhere in the media window during playback and then drag the program window to a new location on your computer's desktop.

- When in full screen mode, move the mouse cursor to the left or right side of the screen to instantly hide the caption bar and playback controls.

- When in full screen mode, the current time from your computer clock is displayed on the caption bar.
During video file playback, you can hover your mouse over the current time on the title bar to view the estimated playback end time.

- You can hover your mouse over the navigational slider to use Instant Preview to quickly find scenes during DVD and movie file playback.

These thumbnails are generated during playback and are only available for video content you previously viewed.
Note: this feature is not supported on videos that have a resolution greater than 2560 x 1440, or when the output display is greater than 2560 x 1440.

- The CyberLink PowerDVD volume control is independent from your computer system’s audio control in the Volume Mixer.

![Volume Mixer](image)

This means, for example, if you mute the volume in CyberLink PowerDVD, the audio will not be muted in other Windows programs. Right-click on the button to open the Volume Mixer.

**Gesture Controls**

If CyberLink PowerDVD is installed on a computer that has a touch enabled display, you can use gesture controls to browse through your media and during media playback.

- When viewing a photo, movie, or video, use the spread and pinch gestures to zoom in and out on the image. These gesture controls are also available in calendar view, so you can change the calendar view to show more than one month, or zoom in on a specific day.
• When viewing a photo, use the swipe right and left gestures to view the previous or next photo. When in calendar view you can swipe up or down to scroll through the days and months in the calendar.

• When playing movies or video files, use the swipe right gesture to quickly jump backward 8 seconds. Swipe left to skip forward 30 seconds.
Video Mark In/Out  (Video Scene Selector)

In the media library you can mark in and out positions on movie files, TV shows, and video clips to highlight the best moment in the video. CyberLink PowerDVD will remember the mark in/out positions, even if you close the program, letting you only play the part of the video that you want.

**Note:** this feature is not supported on videos that have a resolution greater than 2560 x 1440, or when the output display is greater than 2560 x 1440.

To mark a video, do this:

1. Browse to a movie file, TV show, or video clip in the media library and then double-click on it to begin playback.

2. Click \[\] or press the spacebar on your keyboard to pause playback.

3. Hover your mouse over the navigational slider and the playback markers will display.

4. Click and drag the mark in position (icon on the left) and drag it to the desired
starting position of the video.

![Marker icons](image)

**Note:** you can right-click on the markers to use set by time to set more precise positions. See Set by Time for more information.

5. Click and drag the mark out position (icon on the right) and drag it to the desired ending position of the video.

![Mark out position](image)

6. Restart playback and only the video content between the playback markers will be played.

**Note:** to remove the playback markers from a video, right click on one of them and then select Remove Mark In/Out.

### Set by Time

For a more precise placement of a mark in/out position, right click on it and then select Set by Time to open the following dialog.

![Set by Time dialog](image)

Enter the time code (in hour, minute, and second) for the mark in/out position and then click OK to set the marker.
Seek by Time

You can instantly jump to a specific point of time in a disc, movie file, TV show, video clip, or song using the Seek by Time function.

To use the Seek by Time, do this:

1. During media playback, right-click on the navigational slider. The Seek by Time dialog box displays.

2. Enter the time code (in hour, minute, and second) and then click OK. Playback continues from the time you entered.

Media Playback Menu

Depending on the media you are playing, the media playback menu provides quick access to a number of useful functions and features in CyberLink PowerDVD.

Note: the media playback menu is not available during the playback of music, photo slideshows, VCDs, or SVCDs.

DVD Playback Menu

When playing back DVDs in CyberLink PowerDVD, click the button to access the following features:

- **Add Bookmark**: select to add a bookmark on the movie. See Bookmark Functions for more information.

- **Bookmarks/Chapters**: select to jump to a chapter on the disc, or view all the current bookmarks and chapters in the respective viewer. See Bookmark
Select Menu: provides access to the available menus on the disc.

Resume: if you go to the disc's menu during playback, select this option to quickly return to the scene you were just watching.

Note: the resume from menu function is not available if you stopped playback.

Audio Languages: lets you select from available audio streams or dialogue languages. The number of audio streams depends on the disc title itself.

Primary Subtitles: lets you select the default subtitles. Primary subtitles usually display at the bottom of the screen.

Secondary Subtitles: lets you select additional subtitles that display along with the default (primary) subtitles. Secondary subtitles usually display at the top of the screen.

Viewing Angles: when available on some disc titles, select this option to switch among the available camera angles.

Snapshot: select to capture a frame of the DVD. The frame of video is copied to the Windows clipboard and saved as a photo snapshot on your computer. See the Snapshot section in More General settings to select the photo snapshot format and set the folder on your computer where it is saved.

More Functions: select to access some additional playback features such as A-B Repeat, Next Angle, and more. See More Functions for more information.

Blu-ray Disc Playback Menu

When playing back Blu-ray Discs* in CyberLink PowerDVD, click the button to access the following features:

Note: * this feature is not available in some versions of CyberLink PowerDVD.

Select Menu: provides access to the available menus on the disc.

Resume: if you go to the disc's menu during playback, select this option to quickly return to the scene you were just watching.
Note: the resume from menu function is not available if you stopped playback.

- **Still Off**: when playback is paused, but the interactive menu is active, this will resume the video.

- **Chapters**: select to jump to a chapter on the current disc, or view a list of all the available chapters in the Browser. See Browser for more information.

- **PiP Video**: select to enable a picture in picture window that contains additional content, when available on certain Blu-ray Disc titles.

- **Audio Languages**: lets you select from available audio streams, i.e. the dialogue language. The number of audio streams depends on the disc title itself.

- **PiP Audio Language**: when playing PiP video, select the language of the picture in picture video from the PiP Audio Language list.

- **Primary Subtitles**: lets you select the default subtitles. Primary subtitles usually display at the bottom of the screen.

- **Secondary Subtitles**: lets you select additional subtitles that display along with the default (primary) subtitles. Secondary subtitles usually display at the top of the screen.

- **Viewing Angles**: when available on some disc titles, select this option to switch among camera angles.

- **More Functions**: select to access some additional playback features such as the navigational buttons and the color buttons that correspond to ones on your remote control. See More Functions for more information.

**Movie File/TV Show/Video Playback Menu**

When playing back movie files, TV shows, or videos in CyberLink PowerDVD, click the button to access the following features:

Note: when playing back DVD or Blu-ray Disc folders in the Movie Library section, the button provides access to the same media playback menu as a regular disc. See DVD Playback Menu or Blu-ray Disc Playback Menu for more information.
- **Add Bookmark**: select to add a bookmark on the movie file/video. See *Bookmark Functions* for more information.

- **Bookmarks/Chapters**: select to view all the current bookmarks for the movie file/video in the Bookmark Viewer. See *Bookmark Viewer* for more information.

- **Audio Languages**: lets you select from available audio streams, i.e. the dialogue language. The number of audio streams depends on the video file itself.

- **Primary Subtitles**: lets you import external subtitle files and provides access to Subtitles Settings. See *Importing External Subtitle Files* or *Subtitles Settings* for more information.

- **Secondary Subtitles**: lets you import a secondary subtitle file that displays along with the default (primary) subtitles and edit the settings for the secondary subtitles. See *Importing External Subtitle Files* or *Subtitles Settings* for more information.

- **Viewing Angles**: when available on some movie files, select this option to switch among camera angles.

- **Snapshot**: select to capture a frame of the video. The frame of video is copied to the Windows clipboard and saved as a photo snapshot on your computer. See the *Snapshot* section in More General Settings to select the photo snapshot format and set the folder on your computer where it is saved.

  **Note**: during the playback of WTV files, these video playback menu options are not available. You can however select the preferred video and audio stream, as well as any available subtitles during WTV playback.

When video file playback is stopped, click the button to access the following feature:

- **Bookmark Viewer**: select to view all the current bookmarks for the current movie file/video in the Bookmark Viewer. See *Bookmark Viewer* for more information.
Express Menu

The express menu provides quick access to many of CyberLink PowerDVD's controls and playback features during playback. To access it, simply right-click the mouse button on the media window during playback.
Note: the features that are displayed and available in the express menu are completely dependent on the type of media you are currently playing and the features that are available for the specific media (disc title, video file, etc.).

Basic Controls
Use the basic controls to control playback, access the Go To menu, add bookmarks, and more when watching movies and videos.

Playback Controls
Includes the basic playback controls (Play, Stop, Pause, etc.) for CyberLink PowerDVD.

Add Bookmark
Select the Add Bookmark option to add a bookmark on the movie or video during playback.

Bookmark/Chapters
Select to view all the current bookmarks and the chapter thumbnails for the current disc. See Bookmark Viewer or Chapter Viewer for more information.

Go To
Use the Go To option to quickly select a chapter or navigate among available titles, when available. The check mark signifies the current playback title, while the arrows to the right of the title signify further selections in the form of chapters. You can also select the Browser or the Chapter Viewer options for easier access to chapters.

Repeat
Select to repeat the playback for the current chapter, media file, disc title, etc. It also provides access to Say-It-Again and A-B Repeat during disc playback.
Shuffle

When playing slideshows, movie files, and videos, select this option to play the media in a folder or playlist in random order.

Disc Menu Controls

The express menu provides quick access to some disc menu controls during playback.

DVD Menu Controls

During the playback of DVD titles, the following menu controls are available in the express menu.

Select Menu

Use the Select Menu option to quickly jump to one of the available disc menus. See Accessing Disc Menus in PowerDVD for more information.

Resume

If you go to the disc's menu during playback, select Resume to quickly return to the scene you were just watching.

Note: the resume from menu function is not available if you stopped playback.

Blu-ray Disc Menu Controls

During the playback of Blu-ray Disc* titles, the following extra disc menu control is also available in the express menu.

Note: * this feature is not available in some versions of CyberLink PowerDVD.
Still Off

When the playback is paused, but the interactive menu is active, this will resume the video.

Preference Controls

The preference controls provide access to features such as audio language, subtitles, viewing angles, and more.

DVD and Video Preference Controls

During the playback of discs, movie files, and videos, the following preferences are available in the express menu.

Audio Languages

The Audio Languages menu lets you select from available audio streams, i.e. the dialogue language. The number of audio streams depends on the disc title itself.

Subtitles

The Primary Subtitles menu is the selection menu for the default subtitles. Primary subtitles usually display at the bottom of the screen.

The Secondary Subtitles menu is for additional subtitles that you can choose to display along with the default subtitles. Secondary subtitles usually display at the top of the screen.

Closed Captions

Closed Captions, if supported by your disc title, is made available by national organizations and is tailored towards the hearing impaired. The captions are found in video content and in the form of text located somewhere on the picture. Closed captions, as opposed to open captions, are hidden in the video signals and need a special decoder. Select the Settings option to modify how the closed captions text is displayed. See Closed Captions Settings for more information.
Viewing Angles

When available on some disc titles, select this option to switch among available camera angles.

Karaoke

The Karaoke option is available when playing back karaoke discs. See Playing a Karaoke Disc for more information.

Blu-ray Disc Preference Controls

During the playback of Blu-ray Disc* titles, the following extra preference controls are also available in the express menu.

Note: * this feature is not available in some versions of CyberLink PowerDVD.

PiP Video

Select to enable a picture in picture window that contains additional content, when available on certain Blu-ray Disc titles.

PiP Audio Language

Select the language of the picture in picture video from the list.

Primary Subtitles (for Blu-ray Discs)

When PiP Video is enabled, there may be additional subtitles available in Primary Subtitles for the picture in picture video (indicated by (from PiP) next to it). When you select PiP subtitles, they are displayed on the main video.

Note: when the video in the PiP window ends or is closed, the displayed subtitles will revert back to the originally selected Primary Subtitles.
Viewing Controls

In viewing controls you can set the 3D source format, adjust the aspect ratio of the media content you are playing, and more.

3D Source Format

Select this option if you need to change the viewing format of 3D content. See Setting 3D Source Format for more information.

Aspect Ratio

In the Aspect Ratio option, you can access such features as TrueTheater Stretch, Digital Zoom, and Pan & Scan.

Keep Aspect Ratio

Select the Keep Aspect Ratio option to keep the correct aspect ratio of your video content and window and apply a letterbox if required.

Stretch to Fit the Screen

Select Stretch to Fit the Screen to stretch the movie to fit the video window.

TrueTheater Stretch*

The TrueTheater Stretch feature is only available in full screen mode and is for DVD titles with a widescreen aspect ratio (i.e. optimal with 16:9 on a 4:3 monitor). It employs CyberLink's unique Pano Vision video technology to stretch the movie to fit the monitor size.

Note: * this feature is not available in some versions of CyberLink PowerDVD.

The available TrueTheater Stretch modes are as follows:

- **Smart Stretch**: crops and stretches the sides of the picture slightly, while
keeping the center as is.

- **Fit to Screen**: keeps the center of the picture as is, while stretching the sides slightly.

- **Smart for 2.35:1**: select this option for disc titles that have an aspect ratio of 2.35:1. This setting is specifically designed to maximize the display space of widescreen (16:9 or 16:10) display devices when viewing discs with this aspect ratio.

- **Custom Stretch**: enables a custom created aspect ratio configured on the Aspect Ratio tab. See [Aspect Ratio](#) for more information on creating a custom aspect ratio.

**Pan&Scan**

Pan&Scan displays the central portion of disc content and allows you to drag the display area to view all portions of the video. This feature is only available in full screen mode and is for disc titles with the 2.35:1 or 1.85:1 aspect ratios (i.e. optimal for widescreen content on a 4:3 monitor). Check the aspect ratio of your specific disc title for optimal results when using this feature.

Pan&Scan enables you to view content without the black bars, but at the expense of being unable to view the entire screen area at once. The default Pan&Scan position is centered, but you can move the video screen simply by clicking on it and dragging the screen left or right.

**Full Screen/Restore**

Select **Full Screen/Restore** to toggle CyberLink PowerDVD to and from full screen mode.

**Always on Top**

Select this option to have CyberLink PowerDVD play on top of all other open programs and windows on your computer.
Feature Controls

During the playback of discs and other media files you can access the following feature controls in the express menu.

Snapshot

Select to capture a frame of the DVD or video. The frame of video is copied to the Windows clipboard and saved as a photo snapshot on your computer. See the Snapshot section in More General Settings to select the photo snapshot format and set the folder on your computer where it is saved.

More Functions

Select to access some additional playback features such as A-B Repeat, Next Angle, and more. See More Functions for more information.

Share on

When viewing photos, select to share the current photo on a social network or via e-mail.

Print

Select during photo slideshow playback to print the current photo out on a connected printer. When clicked, the photo is sent to your computer's default photo viewer for printing. Proceed to use your computer's default photo viewer to print off the photo as required.

Set as PowerDVD Wallpaper

Select this option to use the current photo as custom PowerDVD wallpaper. See Wallpaper for more information.
Open with

If you'd like to open a photo you are viewing in another program, select Open with and then the desired program.

Delete from Disk

Select this option if you want to remove the current photo you are viewing from the library and delete it from your computer's hard drive.

Locate on Disk

Select this option to view the folder where the photo file is located in Windows Explorer.

Playback Info & Settings

In this section of the express menu you can also toggle the OSD on/off and access the PowerDVD settings window.

Show Information

When you enable Show Information, the OSD (on screen display) displays the variable video bitrate, audio types such as Dolby Digital 5.1, Dolby Digital 2.0 or DTS 5.1, and their audio bit rates. It also displays the playback time elapsed and remaining, plus the chapter and title information.

Note: this feature is not supported on videos that have a resolution greater than 2560 x 1440, or when the output display is greater than 2560 x 1440.

Slideshow Preferences

Select when playing a photo slideshow to adjust slideshow preferences. Select the Duration each photo displays before advancing to the next photo. Select the Effect applied to your slideshow. Motion adds pans and zooms on each photo, while Fade adds a fade effect between the photos.
Settings

Select to access the settings window. See PowerDVD Settings - Player Settings for more information.

Playback Menu

When playing back movie discs, the playback menu provides you with another shortcut for selecting chapters, and provides access to the Browser and the Chapter Viewer.

1. To access the playback menu, right click on the ◀ or ▶ button on the playback controls during playback. The check mark signifies the current chapter you are watching.

2. Select the chapter you want to view to go to that chapter.

Browser

The Browser provides you with a window where you can navigate and view all your available titles, their associated chapters, and any added bookmarks.

*Note: the Browser is also available through the express menu when you select the Go To option.*

1. Select **Browser** in the playback menu to open the Browser window for navigating between titles and chapters, and viewing bookmarks. The red pointer indicates the current playing chapter.
2. Simply select a chapter or a bookmark (indicated by the tack) and then click **Go To** to start playback.

**Chapter Viewer**

The Chapter Viewer lets you view DVD chapter thumbnails in a grid view. You can also access it in the playback menu (click on  , select **Bookmarks/Chapters** and then **Chapter Viewer**) or through the express menu when you select the **Go To** or **Bookmark/Chapters** option.

*Note: the Chapter Viewer is not available for Blu-ray Disc titles for content protection reasons.*

Use a remote control or your mouse to browse through the chapter thumbnails. Select a chapter thumbnail to start playback from that chapter.

*Note: CyberLink PowerDVD saves all of the chapter thumbnails on your computer when you use the Chapter Viewer. If you would like to manage these thumbnails to free up disc space, see the **Cache files** section in **General Settings**.*

**Controlling Playback with PowerDVD Remote**

If you have an Android or iOS device with PowerDVD Remote* installed, you can remotely control the playback of media on a computer that has CyberLink...
PowerDVD 11, 12, 13, 14 or 15 installed. You can also use PowerDVD Remote to play back media on the connected devices in CyberLink PowerDVD.

*Note: this feature is not available in some versions of CyberLink PowerDVD.*

### Setting Up PowerDVD Remote on Device

Before you can use a portable device to remotely control the playback of media, you must first:

- connect the computer with CyberLink PowerDVD 11, 12, 13, 14, 15 installed to a wireless network.
- connect the portable Android or iOS device to the same wireless network.
- download the free PowerDVD Remote app from the online store (Google Play, Apple App Store).
- install the PowerDVD Remote app on your portable device.
- on the computer connected to the wireless network, click on the Devices & Home Media (DLNA) tab of CyberLink PowerDVD and then select PowerDVD Remote. Next, select the Allow PowerDVD Remote to connect and control this computer option to give permission for PowerDVD Remote to control the playback of CyberLink PowerDVD on the current computer.
- enter the Passcode provided on this tab into the device running PowerDVD Remote, so that it can control CyberLink PowerDVD on this computer.

*Note: if required, click Change to generate a new Passcode for the connected device.*

### Playing Media in PowerDVD with PowerDVD Remote

Once you have set up your portable device by connecting it to the wireless network and installing PowerDVD Remote, you can use it to control the playback of media in CyberLink PowerDVD or on the device itself.

To remotely control the playback of media with PowerDVD Remote, do this:

1. Open the CyberLink PowerDVD program on the computer you want to play
the media on.

2. Launch the PowerDVD Remote app on your portable device. PowerDVD Remote will search for and find all the media servers connected to the network it is connected to.

3. Select the server from the list (the name of the computer you launched CyberLink PowerDVD on) to connect to it.

4. If required, enter the four digit passcode to access the media server. See Setting Up PowerDVD Remote on Device for more information.

5. PowerDVD Remote displays the Modules window.

6. In the Modules window of PowerDVD Remote, you can do the following:
   - select Movie to access and play back movie discs on the Movies/TV tab of the computer running CyberLink PowerDVD.
   - select Video to access and play back video files on the Videos tab of the computer running CyberLink PowerDVD.
   - select Photo to access and view photos on the Photos tab of the computer running CyberLink PowerDVD.
   - select Music to access and play back music on the Music tab of the computer running CyberLink PowerDVD.
   - select Device to access and play back media located on the device you are using to control playback. If there are other portable devices connected to the server as well, you can access them and the device you are using to control playback on the Devices tab of the computer running CyberLink PowerDVD.

   Note: when playing media remotely using PowerDVD Remote, the playback controls that are available depend on the type of media you are playing. See Playback Controls for a description of the available controls and playback features for each media type.

7. In PowerDVD Remote, select the Touchpad tab at the bottom of the screen to access and use the touchpad. Dragging your finger across the portable device's screen controls mouse movement on the computer running CyberLink PowerDVD. Double tapping the screen begins playback of selected media.

   Note: the Touchpad gives you all the same options as a regular mouse or touchpad. You can select any button, tab, or media file that is contained in the CyberLink PowerDVD program, and use the scroll bar on the right to scroll through media in a window.
8. In PowerDVD Remote, select the **Playback Controls** tab to control the playback of the selected media using the available controls. If playing a disc on the **Movies** tab, tap the DVD/BD option for more controls including access to the chapter viewer, disc menus, subtitles, available languages, etc.
Chapter 6:

Playback Features

CyberLink PowerDVD includes many playback features that are sure to enhance your movie viewing experience.

TrueTheater Enhancements

Click the button to display the TrueTheater window. TrueTheater is video and audio enhancement technologies from CyberLink that provides better than the original quality viewing during the playback of your media.

Enabling TrueTheater

During the playback of Blu-rays, DVDs, video files (including movie files and TV shows), and videos on YouTube, you can enable TrueTheater video enhancements to maximize the playback quality.

Note: if TrueTheater enhancements are not available for you during playback, check the following section for information on the possible reason: When is TrueTheater is Not Available?

Click the button to open the TrueTheater window and display the following options:

Smart Enhancement

On this tab you can apply all the TrueTheater enhancements automatically during playback. CyberLink PowerDVD dynamically adjusts (turns on or off) TrueTheater video enhancements to provide optimum performance, while maximizing playback quality.

- Video: select this option to enable video enhancements and make the video look better. Drag the available slider left or right to adjust the amount of TrueTheater video enhancements applied. TrueTheater Video enhances video brightness, contrast, and also the color, making it more saturated and vivid. TrueTheater will also sharpen video (if the resolution is less than 720p) to make it look clearer.
- **Audio**: select this option to enable audio enhancements and make the audio sound better. Drag the available slider left or right to adjust the amount of TrueTheater audio enhancements applied. TrueTheater Audio amplifies the movie volume, boosting movie bass and dialogue, to provide a more immersive media viewing experience.

### Advanced Enhancement

Select this tab to manually enable and set the amount of TrueTheater enhancements applied to the video as follows:

#### Video

Select the **Video** option to enable the following True Theater video enhancements:

- **TrueTheater HD**: select this option to up scale the original video to a higher resolution version, which is sharper and artifact-free. TrueTheater HD is capable of boosting 480p video to 1080p. Use the slider to adjust the sharpness to the best output that suits your configuration.

- **TrueTheater Lighting (CyberLink Eagle Vision 2)**: is a video enhancement technology developed by CyberLink that detects video content and dynamically adjusts the brightness/contrast ratios so that you do not need to change the video settings if the video you are watching contains scenes that are overly dark or too bright. Use the level slider to adjust the TrueTheater Lighting effect the desired amount.

- **TrueTheater Color**: select this option to dynamically adjust the color saturation ratio in the video. Use the level slider to make the colors in the video more vivid, without affecting skin tones.

- **TrueTheater Motion**: select this option to enable frame rate upsampling, from 24 fps up to 60 fps, to make panning scenes, particularly in action movies, play more smoothly. TrueTheater Motion can improve the frame rate of video content to 60 or 72 fps, depending on the output frame rate of your display.

- **TrueTheater Noise Reduction**: select this option to reduce the amount of video noise when playing home video files in CyberLink PowerDVD, including High-ISO and TV signal noise. Once enabled, drag the slider to increase or decrease the level of noise reduction on the video.
Note: this feature is not available for disc playback.

- **TrueTheater Stabilizer**: select this option to employ motion compensation technology when playing home video files that are shaky. This feature is ideal for use with video files taken without a tripod or recorded while moving.

  Note: this feature is not available for disc playback.

### Audio

Select the **Audio** option to enable TrueTheater audio enhancements. Drag the available slider left or right to adjust the amount applied. TrueTheater Audio amplifies the movie volume, boosting movie bass and dialogue, to provide a more immersive media viewing experience.

### When is TrueTheater is Not Available?

During video playback, there are some circumstances where TrueTheater enhancements are not available:

- TrueTheater video enhancements are not available during the playback of Blu-ray 3D discs.
- TrueTheater video enhancements are not available when the video resolution exceeds 1080p.
- TrueTheater video enhancements are not available when playing video over a DLNA network with DTCP-IP.
- TrueTheater audio enhancements are not available when the selected HDMI audio output mode in More Audio Settings is either of the "non-decoded" passthrough to external device options.

### TrueTheater Display Modes

The display mode option is available when you enable TrueTheater video enhancements, and lets you select how they are displayed during playback.

You can select from the following display modes:
CyberLink PowerDVD

* Play 3D Media in 3D: select this option to auto enable playback of all 3D media (3D** Blu-ray Disc or DVD, 3D video file, 3D photos). Once enabled, CyberLink PowerDVD will automatically play 3D media in 3D once playback starts, so that you don’t need to enable 3D playback every time you play it.

Note: *this feature is not available in some versions of CyberLink PowerDVD. **Windows 7/8 only.
Note: ** if your version of CyberLink PowerDVD supports 3D Blu-ray Disc playback, you may have to enable playback in settings. See Blu-ray 3D for information on enabling it.

- **Convert 2D Media to 3D**: select this option if you want CyberLink PowerDVD to convert all 2D media (2D Blu-ray Discs, DVDs, video files, YouTube videos, photos) to 3D using TrueTheater 3D when playback starts. Once enabled, you won't need to enable TrueTheater 3D every time you want to convert 2D media.

  **Note**: 3D mode is enabled when the 3D icon on the playback controls displays as . Note that a number of features are disabled during 3D playback.

If you need to adjust your 3D display configuration or the playback preferences, click on the playback controls and then select More 3D Preferences. See 3D Display Preferences for details on all the available configuration options.

  **Note**: * this feature is not available in some versions of CyberLink PowerDVD.

**Adding Bookmarks**

During the playback of DVDs, movie files, TV shows, and video clips, click to bookmark your favorite scenes and gain access to the Bookmark Viewer.

To bookmark a scene, click on and then select Add Bookmark. When you add bookmarks to videos, CyberLink PowerDVD adds a graphic marker on the navigational slider so you can easily find and jump to it later.

**Bookmark Viewer**

In the Bookmark Viewer you can view all of the bookmarked scenes for the current DVD, movie file, TV show, or video clip you are playing. You can also edit the existing bookmarks by adding comments, or export/import DVD bookmarks to/from your hard drive.
To open the Bookmark Viewer, click on and then select **Bookmark/Chapters > Bookmark Viewer** during playback. If playback is stopped in the Videos tab, access it by clicking and then selecting **Bookmark Viewer**.

For DVDs, the Bookmark Viewer displays all of the bookmarks (if any) for the current disc you are watching. For videos, the Bookmark Viewer displays all of the bookmarks (if any) for the current video file and all of videos that have bookmarks in the left pane.

In the Bookmark Viewer, you can perform the following tasks:

*Note: some of these tasks are not available for video bookmarks.*

- for video bookmarks, if required, select the video file in the left pane to view all of the bookmarked scenes for that video.

- click on a bookmark in the main window to play from that scene, or click the **Play** button to play the first bookmarked scene. See **Playing Bookmarks** for more information.

- click on **Edit** to add comments to a bookmark. Click **Save** to save your changes, or **Cancel** to discard the changes.

- to delete a specific bookmark, click on the **Edit** button and then click the button next to the bookmark you want to delete.

- for DVD bookmarks, click on **Export** to save the bookmarks in a MovieMark file on your hard drive. Saved in the BMK format, you can import it into another computer or e-mail it to friends.

- for DVD bookmarks, click to import a set of bookmarks (MovieMarks) in the BMK format into the Bookmark Viewer. You can view a list of the movies that you have imported MovieMarks for by clicking on the drop down in the top left corner. The DVD for the movie must be in the drive to view the bookmarked scenes.

- to delete imported bookmarks (MovieMark) from the list view, select it and then click.

- click on **Exit** to close the Bookmark Viewer and return to the DVD or video.
Playing Bookmarks

When you play a MovieMark or individual bookmark, CyberLink PowerDVD starts the playback from the bookmarked point and continues the playback of the disc/video from the point where it was bookmarked. To view the next bookmarked scene, press the G key on the keyboard.

If the bookmarks are on a movie file, TV show, or video clip, you can just hover your mouse over the navigational slider to view the bookmarked scenes on it.

Hover your mouse over the bookmark to view a thumbnail of the scene, or click it to play the video from that bookmarked point.

More Functions

Open the More Functions window for access to some additional playback features such as A-B Repeat and Next Angle.

To display the More Functions window, click during disc playback, select More Functions, and then click to view all the available buttons.
<table>

</tr>
</tbody>
</table>

**Note:** the below table includes the hotkey for each specific button in more functions, if available. For a complete list of all the hotkeys in PowerDVD and the corresponding behavior, see PowerDVD Hotkeys.
### A-B Repeat

A-B Repeat lets you select any part of the movie for repeated playback. The starting point of the repeating playback is called A and the end is called B. This is different from Say-It-Again, which only repeats the current dialog.

To use A-B Repeat, do this:

1. During playback, click on the button to access the A-B Repeat dialog window (or press the X key on your keyboard).

2. Set point A by clicking the button at the beginning of the segment you would like to repeat.

3. Click to set point B, or where you would like the segment to end. The segment will repeat and loop continuously, even if you close the A-B Repeat dialog window.
4. To cancel A-B Repeat, click the button again or navigate out of the segment's range (i.e. with the navigational slider or by jumping to the next or previous chapters).

**Note:** this feature is not supported with Blu-ray Disc titles.

## Say-It-Again

You can use Say-It-Again to repeat the current dialog you are watching. To use Say-It-Again, do this:

1. Simply click the button during the playback of some dialog to repeat the same dialog again.
2. Click again to turn Say-It-Again off.

## Taking Photo Snapshots

CyberLink PowerDVD lets you capture individual frames from your favorite scenes during the playback of a DVD, movie file, TV show, or video. The frame of video is copied to the Windows clipboard and saved as a photo snapshot on your computer. See the Snapshot section in More General Settings to select the photo snapshot format and set the folder on your computer where it is saved.

**Note:** this feature is not available during the playback of Blu-ray Disc titles. It is also not available in 3D mode, on videos that have a resolution greater than 2560 x 1440, or when the output display is greater than 2560 x 1440.

## Capturing Snapshots

1. During playback, click the button in the More Functions window, or press C on your keyboard, to capture a frame of the current video content. To be more precise, you can pause the scene, play it in slow motion, or step through the frames, and then capture the exact desired frame of video.

2. The Snapshot dialog displays once the photo snapshot it taken. Click the Open Folder button to view the location of the captured photo on your computer's hard drive. Click on Settings to change the photo format or location.
Next Angle

The Next Angle feature is often available for music concert discs. Click during playback to switch among any available angles.

Menu/Number Pad

The Menu/Number pad offers navigation buttons, a pad for entering numbers, and buttons for accessing other functions.

External/Embedded Subtitles

CyberLink PowerDVD supports the use of subtitles that are embedded in MKV movie files. You can also import subtitles that are in an external file during movie file playback.

*Note: the use of external subtitles files is only supported during the playback of individual video files (movie files or TV shows).*

To display or change the external/embedded subtitles during playback, do this:

1. Click on the button (or right-click on the media window to display the express menu).

2. Select Primary Subtitles or Secondary Subtitles, and then select the subtitle language in the list you want to use. If the subtitles you want to use are not available, you may need to import the subtitle file. See Importing External Subtitle Files for more information.

3. To stop displaying the subtitles, click on the button (or right-click on the media window), select Primary Subtitles > Off, or Secondary Subtitles > Off.

See Subtitles Settings for information on changing the font style, position, and encoding for external and embedded subtitles.

Importing External Subtitle Files

You can import subtitles that are in an external file during movie file and video file playback. CyberLink PowerDVD supports the following external subtitle file formats: ASS, PSB, SSA, SMI, SRT, SUB.
To import an external subtitle file, do this:

*Note:* you can also drag and drop a subtitle file onto the CyberLink PowerDVD UI during playback to import it.

1. During playback, click on the button (or right-click on the media window) and then select Primary Subtitles > Import, or Secondary Subtitles > Import.

2. In the dialog that displays, browse to and then select the subtitle file you want to import.

3. Click the Open button to import the subtitle file.

*Note:* CyberLink PowerDVD will also automatically import any supported subtitle files it finds in the same directory as the movie file it is playing back. You can import up to 10 subtitle files, but can only display a maximum of two during playback.

Once imported, you can change the font style, position, and encoding in settings if required. See Subtitles Settings for more information.
Chapter 7:

Utilizing CyberLink Cloud

Click on the CyberLink Cloud* tab to view the media stored on the cloud service from CyberLink. You can upload the videos, photos, and music on your computer's hard drive to CyberLink Cloud. This allows you to back it up, and make it available anywhere for playback on a portable device using Power Media Player. CyberLink PowerDVD can also auto sync the media in your media library with the media on CyberLink Cloud.

*Note: this feature is not available in some versions of CyberLink PowerDVD.

At the bottom of the media window CyberLink PowerDVD displays how much of each type of media you have stored on CyberLink Cloud. It also displays how much free space there is available.

Uploading Media to CyberLink Cloud

You can quickly and easily upload media that is in the CyberLink media library and on your computer's hard drive, to CyberLink Cloud. You can even upload just the playlists you created in CyberLink PowerDVD. The media files (listed in the playlists) will automatically be uploaded with the playlists.

*Note: you can play the media that is stored on CyberLink Cloud, and more. See Playing Media Stored on CyberLink Cloud for more information.

To upload media to CyberLink Cloud, do this:

1. Do any of the following:
   - Click on the Media Library tab and then browse to the media in the library that you want to upload.
   - Click on the My Computer tab and then browse to the media on your
computer's hard drive that you want to upload.

- Click on the **Playlists** tab and then select the playlist you want to upload.

  **Note:** you can also drag media files and folders from within Windows File Explorer and drop them on the CyberLink Cloud area of the media panel to upload them.

2. Select the media that you want to upload. You can select individual media files, or you can select entire media folders or music albums. If you want to upload a playlist, just select the playlist name in the media panel.

3. Drag the selected media/folders/playlist and then drop them on the CyberLink Cloud area of the media panel. CyberLink PowerDVD will upload all the selected content to CyberLink Cloud.

  **Note:** if you are uploading movie files to CyberLink Cloud, you will be asked if you want to upload its subtitles, if available, for the movie as well.

### Syncing Media with CyberLink Cloud

CyberLink PowerDVD will automatically sync the media in your media library with the media on CyberLink Cloud, ensuring that it is always available when and where you need it.

  **Note:** you can configure the sync options for syncing media in **CyberLink Cloud Settings**.

To sync media with CyberLink Cloud, do this:

1. In CyberLink PowerDVD, click on the **CyberLink Cloud** tab of the media panel and then the **Information** section.

2. Click the in the media window and then configure the options as follows:

   - **Automatically download videos uploaded by other devices:** select this option if you want CyberLink PowerDVD to download and import any new videos it finds on CyberLink Cloud into the media library.

   - **Automatically sync videos with CyberLink Cloud:** select this option if you want
CyberLink PowerDVD to sync the videos in the media library with the videos on CyberLink Cloud. You can choose to sync All videos, or just the Selected playlists, folders you specify once this option is selected.

3. Click the 📀 in the media window and then configure the options as follows:

- **Automatically download photos uploaded by other devices**: select this option if you want CyberLink PowerDVD to download and import any new photos it finds on CyberLink Cloud into the media library.

- **Automatically sync photos with CyberLink Cloud**: select this option if you want CyberLink PowerDVD to sync the photos in the media library with the photos on CyberLink Cloud. You can choose to sync All photos, or just the Selected playlists, folders you specify once this option is selected.

4. Click the 📀 in the media window and then configure the options as follows:

- **Automatically download music uploaded by other devices**: select this option if you want CyberLink PowerDVD to download and import any new music it finds on CyberLink Cloud into the media library.

- **Automatically sync music with CyberLink Cloud**: select this option if you want CyberLink PowerDVD to sync the music in the media library with the music on CyberLink Cloud. You can choose to sync All music, or just the Selected playlists, artists, albums, and genres you specify once this option is selected.

5. Click the Sync button when ready to begin the sync process. CyberLink PowerDVD will sync all the media based on the options you selected.
CyberLink PowerDVD
Chapter 8:

Sharing, Syncing, and Transferring Media in the Media Library

In CyberLink PowerDVD you can share all of the media in the PowerDVD media library so that it is available to other computers and devices connected to the same network. You can also share videos and photos in the media library on social networking web sites, sync* all the media in the media library to an Android device that is connected via a USB cable, or transfer movie files to a device on the Devices & Home Media (DLNA) tab.

* This feature is not available in some versions of CyberLink PowerDVD.

Sharing Media on a Network

You can share the media in the PowerDVD media library so that it is available to other computers and devices that are connected to the same home network.

To share the media on your computer running CyberLink PowerDVD on a home network, do this:

1. Ensure your computer is connected to a Wi-Fi home network.
2. Hover your mouse over the Devices & Home Media (DLNA) tab of CyberLink PowerDVD media panel, click on the menu button, and then select Share My Media with Home Media Devices. The Home Media (DLNA) preferences window displays.
3. Configure all the sharing options in the Home Media (DLNA) preferences window. See Home Media (DLNA) Preferences for detailed information on configuring these options.
4. Click OK to save your changes and share the media with the specified home media clients.
Sharing Media on Social Networks

In CyberLink PowerDVD you can upload the videos in your media library to Facebook, YouTube and Vimeo, or share the photos on Facebook and Flickr.

Uploading Videos to Facebook

You can upload videos to Facebook from within CyberLink PowerDVD. To upload a non-copyrighted video to Facebook, do this:

1. Select the Videos section on the Media Library tab to display all the available video files.

2. Browse to and select the videos you want to upload to Facebook.

3. Click in the bottom right of the playback controls, and then select Facebook.

4. Click on Sign In to grant CyberLink PowerDVD access to your Facebook account, and then sign in and complete the authorization process. Once done, click Close to continue.

5. Enter the details about your video as follows:
   - **Video title**: enter the title of your video. If this field is grayed out, deselect the Use file name(s) check box.
   - **Video description**: enter in a short description of your video.
   - **Privacy**: select who has permission to view the video once it's uploaded.

**Note**: you may need to hover your mouse over the button to display the share button.

**Note**: you must enter both a title and description before you can upload your video.
6. Click the **Upload** button to proceed. Click on **Done** once your video is uploaded.

## Uploading Videos to YouTube

You can upload videos in the media library directly to YouTube. To upload a non-copyrighted video to YouTube, do this:

1. Select the **Videos** section on the **Media Library** tab to display all the available video files.
2. Browse to and then select the videos you want to upload to YouTube.
3. Click in the bottom right of the playback controls, and then select **YouTube**.

   **Note:** you may need to hover your mouse over the button to display the share button.

4. The upload wizard opens, displaying the sign in window. To sign in to YouTube do one of the following:
   - if you already have a YouTube account, enter in your username and password and then click the **Sign In** button to sign in and authorize CyberLink PowerDVD to upload video to your account.
   - if do not have a YouTube account, select the **Sign up to YouTube** link to create a new account and then authorize CyberLink PowerDVD to upload video to your created account.

5. Confirm the Copyright Disclaimer and then click **Next** to proceed.
6. Enter the details about your video as follows:
   - **Title**: enter the title of your video. If this field is grayed out, deselect the **Use file name(s)** check box.
   - **Description**: enter in a short description of your video.
   - **Tags**: enter in several tags, separated by a comma, that describe your video. Tags are keywords that people can search for on YouTube.

   **Note:** you must enter a title, description and at least one tag before you can upload the video.
Video category: select the relevant video category type from the list.

Privacy: select whether to make the video Public or mark it as Private.

3D option*: select the Upload to 3D option if you want to upload the video to YouTube 3D. If the video you are uploading is in 2D, CyberLink PowerDVD will use TrueTheater 3D* to convert it 3D before uploading.

Note: * this feature is not available in some versions of CyberLink PowerDVD.

7. Click the Upload button to proceed and begin uploading your video to YouTube. Click the Done button once your video is uploaded.

Uploading Videos to Vimeo

You can upload videos in the media library directly to Vimeo. To upload a non-copyrighted video to Vimeo, do this:

1. Select the Videos section on the Media Library tab to display all the available video files.

2. Browse to and then select the videos you want to upload to Vimeo.

3. Click in the bottom right of the playback controls, and then select Vimeo.

Note: you may need to hover your mouse over the button to display the share button.

4. The upload wizard opens, displaying the sign in window. To sign in to Vimeo do one of the following:

   - if you already have a Vimeo account, enter in your username and password and then click the Sign In button to sign in and authorize CyberLink PowerDVD to upload video to your account.

   - if do not have a Vimeo account, select the Sign up to Vimeo link to create a new account and then authorize CyberLink PowerDVD to upload video to your created account.

5. Confirm the Copyright Disclaimer and then click Next to proceed.

6. Enter the details about your video as follows:
Sharing, Syncing, and Transferring Media in the Media Library

- **Title**: enter the title of your video. If this field is grayed out, deselect the **Use file name(s)** check box.

- **Description**: enter in a short description of your video.

- **Tags**: enter in several tags, separated by a comma, that describe your video. Tags are keywords that people can search for on Vimeo.

  **Note**: you must enter a title, description and at least one tag before you can upload the video.

- **Privacy**: select whether to make the video **Public** or mark it as **Private**.

7. Click the **Upload** button to proceed and begin uploading your video to Vimeo. Click the **Done** button once your video is uploaded.

### Uploading Photos to Facebook

To upload photos to Facebook, do this:

1. Select the **Photos** section on the **Media Library** tab to display all the available photos.

2. Browse to and select all of the photos you want to upload to Facebook.

3. Click in the bottom right of the playback controls, and then select **Facebook**.

  **Note**: you may need to hover your mouse over the **button to display the share button.

4. Click on **Sign In** to grant CyberLink PowerDVD access to your Facebook account, and then sign in and complete the authorization process. Once done, click **Close** to continue.

5. Enter the details about your photo as follows:

   - **Select an album**: select an existing album from your Facebook page to upload the photos to. Select **Create a new album** to add the photos to a new album.
   
   **Note**: if you are creating a new album, you must enter an album name before you can upload your photos.

   - **Album name**: enter a name for a newly created photo album.
• **Location:** enter in the location where the photos were taken.

• **Album description:** enter in a short description for the photos you are uploading.

• **Privacy:** select who has permission to view these photos once they are uploaded.

• **Add photo description:** enter a description that will display under all of the uploaded photos.

6. Select **Upload** to begin uploading your photos to Facebook. Select **Done** once your photos are uploaded.

### Uploading Photos to Flickr

To upload photos to Flickr, do this:

1. Select the **Photos** section on the **Media Library** tab to display all the available photos.

2. Browse to and select all of the photos you want to upload to Flickr.

3. Click ![share button](image) in the bottom right of the playback controls, and then select **Flickr**.

   **Note:** you may need to hover your mouse over the ![share button](image) button to display the share button.

4. Click on **Sign In** to grant CyberLink PowerDVD access to your Flickr account, and then sign in and complete the authorization process. Once done, click **Close** to continue.

5. Enter the details about your photo as follows:

   • **Resize:** select whether you want to resize the photos or not, and then the size, if applicable.

   • **Privacy:** select who has permissions to view these photos once they are uploaded. Select **Public** to share them with the world.

   • **Additional tags:** enter in tags that describe your photos.

6. Select **Upload** to begin uploading your photos to Flickr. Select **Done** once your photos are uploaded.
Syncing Media to Connected Device

You can sync media in the media library with the media on an Android device.*

**Note:** you must first connect your Android device to a computer (via USB cable) running CyberLink PowerDVD before you can sync media to it. * this feature is not available in some versions of CyberLink PowerDVD.

To sync media with connected devices, do this:

1. In CyberLink PowerDVD, click on the Devices & Home Media (DLNA) tab of the media panel and then select the connected device in the list.

2. Click the **General** tab and then configure the options as follows:
   - **Open PowerDVD when this device is connected via USB**: select this option if you want CyberLink PowerDVD to automatically launch when the device is connected to your computer.
   - **Auto start syncing process when device is connected via USB**: select this option if you want CyberLink PowerDVD to automatically sync media on the connected device with the media in the media library.
   - **Auto transcode video in**: select this option and then select the converted video quality of the files that CyberLink PowerDVD syncs to your Android device. If selected, during the sync process CyberLink PowerDVD converts non-MP4 videos to the MP4 format to ensure they are playable on your Android device.

3. Click the **Videos** tab and then configure the options as follows:
   - **Import newly found videos from my device**: select this option if you want CyberLink PowerDVD to import any new videos it finds on your connected Android device into the media library.
   - **Sync videos in library with my device**: select this option if you want CyberLink PowerDVD to sync the videos in the media library with the videos on your connected Android device. You can choose to sync **All videos**, or just the **Selected playlists, folders** you specify once this option is selected.
Note: you can also manually transfer videos from your connected Android device to the media library, or vice versa. Just click on the device on the Devices tab, and then click Videos. Browse to the videos on your device, select them, and then drag and drop them onto the Videos section of the Media Library tab. To manually transfer videos from the media library to your device, just drag and drop them on to your device in the Devices tab.

4. Click the Photos tab and then configure the options as follows:

- **Import newly found photos from my device**: select this option if you want CyberLink PowerDVD to import any new photos it finds on your connected Android device into the media library.

- **Sync photos in library with my device**: select this option if you want CyberLink PowerDVD to sync the photos in the media library with the photos on your connected Android device. You can choose to sync **All photos**, or just the **Selected playlists, folders** you specify once this option is selected.

  Note: you can also manually transfer photos from your connected Android device to the media library, or vice versa. Just click on the device on the Devices tab, and then click Photos. Browse to the photos on your device, select them, and then drag and drop them onto the Photos section of the Media Library tab. To manually transfer photos from the media library to your device, just drag and drop them on to your device in the Devices tab.

5. Click the Music tab and then configure the options as follows:

- **Import newly found music from my device**: select this option if you want CyberLink PowerDVD to import any new music it finds on your connected Android device into the media library.

- **Sync music in library with my device**: select this option if you want CyberLink PowerDVD to sync the music in the media library with the music on your connected Android device. You can choose to sync the **All music**, or just the **Selected playlists, artists, albums, and genres** you specify once this option is selected.

  Note: you can also manually transfer music from your connected Android device to the media library, or vice versa. Just click on the device on the Devices tab, and then click Music. Browse to the music on your device, select it, and then drag and drop it onto the Music section of the Media Library tab. To manually transfer music from the media library to your device, just drag and drop it on to your device in the Devices tab.

6. Click the Sync button when ready to begin the sync process. CyberLink PowerDVD will sync all the media based on the options you selected.
Transferring Movie Files to Devices

You can manually transfer movie files that are in your movie library to connected devices. When you do this, any subtitles that are available for the movie are also transferred to the device.

*Note: the transfer of DVD and Blu-ray Disc folders to connected devices is not supported.*

To manually transfer media with connected devices, do this:

1. In CyberLink PowerDVD, click on the **Movies/TV** tab, and then the **Movie Library** section.

2. Select the movie file you want to transfer to the device, and then drag and drop it on the device in the **Devices & Home Media (DLNA)** tab of CyberLink PowerDVD.

3. If there are subtitles available for the selected movie file the Subtitle Copy Options window displays with the following options:

   - **Copy subtitles as individual subtitle file**: select this option if you plan to play the movie with CyberLink Power Media Player on your device.

   - **Blend and encode below subtitle file with the video**: select this option if the movie file playback software on your connected device does not support subtitle files. If required, select the subtitle file from the available list that you want to blend/encode.

   - **No, don't copy any subtitle files**: select this option if you don't want the subtitle file copied to your device.

4. Click **OK** to transfer the movie file and its subtitles to the connected device.
Chapter 9:

PowerDVD Settings - Player Settings

This chapter outlines the Player Settings of CyberLink PowerDVD. Modify these settings in the program to configure CyberLink PowerDVD to your specific playback requirements.

You can access the Player Settings tab by:

- clicking the button at the top of the window on the caption bar.
- clicking the button on the playback controls and then selecting Player Settings.
- pressing Ctrl+Shift+C on your keyboard.

*Note: Dolby, Pro Logic, Surround EX, Dolby Digital Plus, Dolby TrueHD and the double-D symbol are trademarks of Dolby Laboratories. DTS, DTS 96/24, DTS-HD are trademarks of DTS (Digital Theater Systems).*

General Settings

On the General settings tab you can name your PowerDVD, set the language of the user interface, configure player options, and more. The available settings are as follows:

**Name your PowerDVD**

In the field provided, enter a name for CyberLink PowerDVD on the current computer you are using. You use this name to identify this computer on a network or the Home Media (DLNA) tab of another computer running PowerDVD.

**UI language**

The UI language option allows you to set the language for CyberLink PowerDVD's user interface. In the drop-down, select the specific language that you want
CyberLink PowerDVD

CyberLink PowerDVD to use. Select **System Default** if you want the language to be the same as your operating system’s.

**Player options**

- **Run PowerDVD automatically at Windows startup**: select this option to have CyberLink PowerDVD launch automatically when your computer starts.

- **Show OSD**: select this option if you want to show the on screen display (OSD) text during playback.

- **Automatically play next video when video ends**: select this option if you want CyberLink PowerDVD to play the next video in finds in a folder when playback of the previous one ends.

- **Check for product update information**: select to periodically check for updates or new versions of PowerDVD automatically.

**Auto-Resume setting**

The **Auto-Resume setting** section lets you set the behavior of CyberLink PowerDVD when you play a DVD disc or video file (in the movie/TV show library) you viewed previously. Select from the available settings in the drop-down list. To prevent CyberLink PowerDVD from prompting, select one of the first two options. See **Auto Resume** for more detailed information on this feature.

**Select files opened with PowerDVD**

Click the **Set File Association** button to set the file formats that CyberLink PowerDVD is the default player for. When any of the selected file formats in the Set File Association window are double-clicked on your computer, CyberLink PowerDVD launches and plays it back.

**Note**: this feature is not available under Windows 8. Instead, you can click on the **Set Associations for PowerDVD** button to access the Set Program Associations function in Windows.

The check boxes are defined as follows:

- ☐ means CyberLink PowerDVD is not the default player for this type of file.

- ☑ means for these file extensions, CyberLink PowerDVD is the default player
for some, but not all of them.

- **✓** means CyberLink PowerDVD is the default player for all the file extensions in this type.

- **Play automatically upon inserting disc**: select this option to have CyberLink PowerDVD automatically launch and start playback when a disc is inserted into the disc drive.

### CyberLink Product Improvement Program

- **I want to participate**: select this item if you would like to participate in the CyberLink Product Improvement Program for PowerDVD. Once enabled, CyberLink PowerDVD will collect information about the hardware and software configuration of your computer system, as well as your usage behavior and statistics related to the software. Click the **Learn more** link to view more detailed information about the content collected.

  **Note:** the CyberLink Product Improvement Program for PowerDVD will not collect any personal information for purposes of identifying you.

### Reset "Never show again" dialogs

Click the **Reset** button to reset all the "Never show again" dialogs back to the default settings. All of these CyberLink PowerDVD's dialogs will display again once the button is clicked.

### Cache files

Click the **Cache Files** button to manage the cache used for storing chapter thumbnails, the Instant Thumbnails that are generated as you watch video content, and for pinned videos. This cache is also used to store the extra content downloaded during Blu-ray Disc playback, such as BD-Live content, Blu-ray applications, etc.

In the Cache Files window, you can modify the options as follows:

- **Save cache files to**: if you would like to change the location where the cache files are stored, click **Browse** and then navigate to the folder you want to use for storage.
Limit the size of the cache storage to: select this option and then in the field provided, enter the maximum amount of disk space CyberLink PowerDVD can use for storing cache files. Once this limit is reached, older cache files are removed to make room for the new cache files.

Current cache size: indicates the current size of the cache file storage.

Click the Clear Cache button to empty the cache and delete this extra content from your computer to free up disk space if required.

More general settings

Click the More Settings button to access additional settings, such as configuring settings for captured frames (snapshots), selecting the default movie language, and more. See More General Settings for more detailed information.

More General Settings

Click the More Settings button to access additional settings, such as configuring settings for captured frames (snapshots) and selecting the default movie language.

More General Settings is composed of two tabs: Snapshot and Movie Language. The available settings on them are as follows:

Snapshot

On the Snapshot tab you can configure the settings for capturing frames of your favorite videos or movies. See Taking Photo Snapshots for more information.

- Snapshot format: select the desired file format of the captured frame snapshots from the drop-down.

- Save snapshot to: if you would like to change the location where the snapshots are saved, click Browse and then navigate to the folder you want to use for storage.

Movie Language

The Movie Language tab lets you set the default movie language for your disc content (when available).
Default movie language settings

- Select the **Customize** option to specify a desired default language for a disc's menu, subtitles, and audio.

- Select **Same as UI language** if you want CyberLink PowerDVD to automatically display a disc's menu, subtitles, and audio in the same language as your operating system's.

  **Note:** the language you select is only used if available on the disc title you are playing back.

Video, Audio, Subtitles Settings

On the **Video, Audio, Subtitles** settings tab you can configure settings for video and audio playback. You can also customize subtitles on movie files, and closed captions on DVDs and Blu-ray movies. The available settings are as follows:

**Videos**

In the **Videos** section you can enable hardware acceleration, apply video enhancements, and more. The available settings are as follows:

- **Enable hardware acceleration decoding whenever possible:** select this option to use GPU acceleration to decode the video for smoother movie playback. When the option is selected, CyberLink PowerDVD will enable (if possible) hardware acceleration whenever playing Blu-ray/DVD/video files. Whether hardware acceleration can be enabled or not depends on your computer's GPU (ex. Intel, NVIDIA, AMD) capabilities. For more detailed information, check with your GPU manufacturer, or contact our customer support team.

  **Note:** during video file and DVD playback, if TrueTheater video enhancements are enabled, then hardware acceleration will not be used even if this option is enabled.

- **Enable AMD™ Fluid Motion for Blu-ray movies:** if your computer's graphics card and driver supports AMD™ Fluid Motion, this option will be available. Select it to enable smoother Blu-ray playback.
**Note:** during Blu-ray 3D playback or when in 3D mode, True Theater video enhancements are disabled when AMD™ Fluid Motion is enabled.

- Click the **Video Enhancements** button to apply enhancements to the current video you are watching. See [Enabling Video Enhancements](#) for a detailed description of the available features and settings.

  **Note:** * this feature is not available in some versions of CyberLink PowerDVD.

Click the **More Video Settings** button to access additional settings, such as de-interlacing and setting the playback aspect ratio. See [More Video Settings](#) for more detailed information.

### Audio

In the Audio section you can set the audio output mode and more. The available settings are as follows:

- **Output:** depending on your sound card and/or number of speakers, select the output that matches your configuration. See [Speaker Environment](#) for a definition of each output type.

Click the **More Audio Settings** button to access additional settings, such as setting output quality, output synchronization, and more. See [More Audio Settings](#) for more detailed information.

### Subtitles and Closed Captions

This section lets you change font, style, position, encoding, and more for subtitles on movie files. You can also change the font face, size, and color for closed captions text. Click the **Subtitles Settings** button to access these settings. See [Subtitles Settings](#) for more detailed information.

  **Note:** these settings only apply to external and embedded subtitles for movie files and TV shows. Subtitles on Blu-ray and DVD discs/folders cannot be changed via this setting.
More Video Settings

Click the More Video Settings button in Video, Audio, Subtitles settings to access additional settings, such as de-interlacing and setting the playback aspect ratio.

More Video Settings is composed of two tabs: De-interlacing and Aspect Ratio. The available settings on them are as follows:

De-interlacing

On the De-interlacing tab you can set how and when to convert interlaced video into a non-interlaced form.

De-interlace settings

- Select None if you don't wish to use de-interlacing.
- Select Perform de-interlacing if you want to use de-interlacing, and then select When to apply de-interlacing from the drop-down.

Note: if video enhancements are enabled, the below de-interlacing options are disabled.

- If using hardware acceleration during playback, select the de-interlacing algorithm from the second drop-down list. Try each option to see which provides you with the best results.
- If using software decoding during playback, select the de-interlacing algorithm from the third drop-down list. Try each option to see which provides you with the best results.

Aspect Ratio

On the Aspect Ratio tab you can control how 4:3 video is converted to 16:9 (and vice versa).

Aspect ratio preference

- Always maintain video aspect ratio: select this option to retain the original
aspect ratio whenever you resize the video display. This option is mutually exclusive with the TrueTheater Stretch option below.

- **Apply stretch**: select this option to stretch all parts of the video equally, resulting in noticeable distortion when the aspect ratio of the video display does not match the aspect ratio of the monitor.

### TrueTheater Stretch

**TrueTheater Stretch** is a non-linear video stretching technology that produces minimal distortion in the center of the picture. TrueTheater Stretch feature is only available in full screen mode and is for DVD titles with a widescreen aspect ratio (i.e. optimal with 16:9 on a 4:3 monitor). It employs CyberLink's unique Pano Vision video technology to stretch the movie to fit the monitor size.

*Note*: *this feature is not available in some versions of CyberLink PowerDVD. This feature is disabled during the playback of Blu-ray Disc titles when DxVA is in use.*

Once enabled, select one of the following options:

- **Smart Stretch**: (recommended for most videos) crops and stretches the sides of the picture slightly, while keeping the center as is.
- **Fit to Screen**: keeps the center of the picture as is, while stretching the sides slightly.
- **Smart for 2.35:1**: for disc titles that have an aspect ratio of 2.35:1. This setting is specifically designed to maximize the display space of widescreen (16:9 or 16:10) display devices when viewing discs with this aspect ratio.

### More Audio Settings

Click the **More Audio Settings** button in Video, Audio, Subtitles settings to access additional settings, such as setting output quality, output synchronization, and more.

More Audio Settings is composed of two tabs: **Output Quality** and **Miscellaneous**. The available settings on them are as follows:
Output Quality

On the **Output Quality** tab you can set your speaker environment, output mode, and the dynamic range compression used on the audio.

**Speaker environment**

*Note: these settings are disabled in versions of CyberLink PowerDVD that use Dolby PCEE to optimize sound for media playback.*

Depending on your sound card and/or number of speakers, select the speaker environment that matches how you are listening to content in CyberLink PowerDVD:

- **Headphone** is mainly for notebook users who listen to their audio output on headphones.

- **2 Speaker** is the selection for most users playing discs on their desktop/laptop who only have 2 speakers or a sound card that only outputs two channels.

- The **4 Speaker** selection is for computers equipped with sound cards that support 4-ch output.

- The **6 Speaker** selection (a.k.a. 5.1 channel) is for computers equipped with sound cards that support 6-ch output and is optimal for DVD Video titles that feature multichannels encoding such as Dolby Digital 5.1 or DTS 5.1.

- The **8 Speaker** (a.k.a. 7.1 channel) option is available for users who have multiple speakers and wish to output audio to each of them.

- The **Use S/PDIF** option is an advanced technological Digital InterFace, as opposed to transferring signals via conventional analog interfaces, designed by the Sony and Philips corporations. To enjoy true 6 speaker output quality, you must have an external Dolby Digital or DTS decoder along with a S/PDIF-compliant sound card to make this selection available.

  *Notes: when the Use S/PDIF audio output is enabled and the output stream is not PCM, the volume control for CyberLink PowerDVD is disabled because your decoder assumes the task.*

- The **HDMI** output selection is for users who have their audio connected with an HDMI (High-Definition Multimedia Interface) connector.
Output mode

This option lets you select the special processing that is used on the audio signal. Experiment with the available settings to decide which you prefer.

*Note:* the selections that are available in the Output mode drop down menu are dependent on the selection made in Speaker Environment and the configuration of your computer.

Headphone Output Options

The following output options are available when the speaker environment is headphone. The option you should select depends on your personal preference and setup.

- The major difference between **Dolby Surround* Compatible Downmix** and **Stereo** is that Dolby Surround uses the Dolby Surround downmixing algorithm and the possibility exists of connecting an analogue Pro Logic decoder to the sound card so as to enable 4-ch surround sound (left, right, center, surround) for Dolby Surround. Otherwise, both are relatively similar in 2-channel output.

- **Dolby Headphone*** is a post-processing effect designed to create a virtual surround sound experience particularly for a headphone environment, but is suitable also for both notebook and desktop environments. Select one of the following options depending on your individual listening environment.

  - **Dolby Headphone: Small room model**: this option simulates a small, well-damped private room appropriate for both movies and music-only recordings. It is equivalent to the Dolby Headphone Reference Room and is provided on all Dolby Headphone equipped products.

  - **Dolby Headphone: Conference room model**: this option simulates a more acoustic live room particularly suited for music listening (e.g. intimate jazz clubs).

  - **Dolby Headphone: Movie theater model**: this option simulates larger venues like a concert hall or movie theater.

- The **TrueTheater Surround*** option uses technology developed by CyberLink to improve the quality of audio output from a notebook over headphones. The Advanced options simulate the very different experiences of listening to sound in a living room, a small theater or a large stadium. Select one of the
following options depending on your individual listening environment.

- **Living Room**: this option simulates a small, well-damped private room appropriate for both movies and music-only recordings.

- **Theater**: this option simulates an intimate live concert environment, particularly suited for music listening.

- **Stadium**: this option simulates a larger concert venue.

*Note*: *this feature is not available in some versions of CyberLink PowerDVD.*

**2 Speaker Output Options**

The following output options are available when you select 2 speaker. The option you should select depends on your personal preference and setup.

- The major difference between **Dolby Surround** Compatible Downmix and **Stereo** is that Dolby Surround uses the Dolby Surround downmixing algorithm and the possibility exists of connecting an analogue Pro Logic decoder to the sound card so as to enable 4-ch surround sound (left, right, center, surround) for Dolby Surround. Otherwise, both are relatively similar in 2-channel output.

- The **Dolby Virtual Speaker** option allows you to experience virtual surround sound through 2 speakers. Select one of the following options depending on your individual listening environment.

  - **Reference**: this mode creates a convincingly realistic five-speaker surround sound from two speakers with the apparent width of the sound across the front image defined by the distance between the two speakers.

  - **Wide 1**: this mode provides a wider, more spacious front image when the two speakers are close together.

  - **Wide 2**: this mode is similar to Wide 1, but further emphasizes the surround speakers.

- **TrueTheater Surround**: is a virtual surround technology developed by CyberLink. Select one of the following options depending on your individual listening environment.

  - **Living Room**: this option simulates a small, well-damped private room
appropriate for both movies and music-only recordings.

- **Theater**: this option simulates an intimate live concert environment, particularly suited for music listening.

- **Stadium**: this option simulates a larger concert venue.

  **Note**: *this feature is not available in some versions of CyberLink PowerDVD.*

### 4/6/8 Speaker Output Options

The following output options are available when you select 4, 6, or 8 speaker. The option you should select depends on your personal preference and setup.

- **Dolby Pro Logic IIx***: has three options. Select one of the following options depending on your individual listening environment.
  
  - **Movie mode**: select this option for watching movies.
  
  - **Music listening**: select this option for listening to music.
  
  - **DDEX mode**: select this option for enhanced surround sound.

- **TrueTheater Surround***: is an audio channel expansion technology developed by CyberLink that converts a stereo audio sound and outputs to multiple channels (converts a 2 channel source to 4, 6, 7, or 8 speakers or a 6 channel source to 7 or 8 speakers). Select one of the following options depending on your individual listening environment.

  - **Movie playback**: this mode is suitable for movies, especially those with dynamic audio position shifting.

  - **Music mode - standard**: this mode simulates a concert from inside the audience.

  - **Music mode - onstage**: this mode simulates a concert from onstage.

  **Note**: *this feature is not available in some versions of CyberLink PowerDVD.*
Use S/PDIF Output Modes

The following output modes are available during the playback of Blu-ray Disc titles when Use S/PDIF is selected as the speaker environment. The mode that you should select depends on the external decoder (AV Receiver) connected to your computer.

- **Only primary audio**: this mode only outputs the audio from the primary video (e.g. no sound will be available for Picture-in-Picture, secondary video streams or director commentaries). The compressed audio format is passed-through to the external decoder unit (AV Receiver).
  
  **Note**: if the primary audio format is another format besides Dolby Digital, DD+, DTS or DTS-HD, CyberLink PowerDVD will decode it and output both audio signals simultaneously.

- **Dolby Digital* mixing**: this mode outputs both primary video sound and secondary video sound simultaneously by mixing both audio and encodes into a Dolby Digital bitstream. Select this option if your external decoder unit (AV Receiver) supports Dolby Digital.

- **DTS* mixing**: this mode outputs both primary video sound and secondary video sound simultaneously by mixing both audio and encodes into a DTS bitstream. Select this option if your external decoder unit (AV Receiver) supports DTS.
  
  **Note**: * this feature is not available in some versions of CyberLink PowerDVD.

HDMI Output Modes

The following output modes are available when an external decoder (AV Receiver) is connected with an HDMI connector under Windows 8, 7 or Vista. The mode that you should select depends on the external decoder (AV Receiver) connected to your computer.

- **PCM decoded by PowerDVD**: this mode creates a digital representation of an analog signal. Select this option if your external decoder (AV receiver) does not support Dolby Digital or DTS to produce a digital sounding output for your audio.

- **Non-decoded Dolby Digital/DTS audio to external device**: this mode passes compressed audio through to your external decoder (AV receiver). Select this option if your amplifier/receiver supports Dolby Digital or DTS to enable either
during playback, when available.

- **Non-decoded high-definition audio to external device (HDMI 1.3 and above):** this mode passes lossless audio through to your external decoder (AV receiver). Select this option if your amplifier/receiver supports high definition audio to enable either during playback, when available.

**Dynamic range compression**

This section only applies to disc titles with Dolby Digital technology.

- select the first option if you are watching in a quiet environment. All audible sound, from low frequency to high frequency audio effects, are highly distinctive and fall into the full dynamic range of Dolby Digital.

- select the second option if you are watching in a normal listening environment. Audible effects that fall in the extreme ranges of Dolby Digital's audio spectrum are compressed.

- select the third option if you are watching in a noisy environment, or on a notebook or laptop. For this option, low range audio signals are amplified so that the audible volume will be increased.

**Miscellaneous**

On the Miscellaneous tab you can synchronize the audio output and enable exclusive audio output.

**Audio output synchronization**

Use the audio output synchronization option to fix audio and video streams that are out of sync. This can occur if the audio and video are connected via different interfaces, because TV post-processing can delay the video. You can also use this option if you are experiencing an audio delay when using Bluetooth headphones.

- **Delay audio for:** in the field provided, enter the duration you want the audio delayed (up to 2 seconds). If the audio is behind the video, you can advance it up a half a second by entering a negative value.
Exclusive audio output (WASAPI Exclusive)

**Note:** this feature is only available when playing audio with the following codecs: ALAC, AAC (LC/HE), AMR-NB, Dolby Digital, Dolby Digital Plus, Dolby TrueHD, DTS, DTS-HD, FLAC, MP3, MPEG Audio, LPCM, WAV, WMA. This feature is not available under Windows XP.

- select the available option if you want to utilize the Windows Audio Session API (WASAPI) to mute all other audio during playback and bypass the Windows mixer to avoid audio quality degradation by Windows sound mixing. If supported by your audio device (card/chip) and driver, the audio heard during playback will be bit perfect. Once selected, CyberLink PowerDVD will exclusively play the intended audio and mute all other audio on your computer, including any secondary audio that may be available on a Blu-ray Disc.

Subtitles and Closed Captions Settings

In the Subtitles and Closed Captions Settings window you can modify settings for subtitles for movie files. You can also change the font face, size, and color for closed captions text. For additional closed captions settings, see More Closed Captions Settings.

Subtitles Settings

Click the **Subtitles Settings** button in Video, Audio, Subtitles settings to access change font style, position, encoding, and more for subtitles on movie files. The available settings are as follows:

**Note:** these settings only apply to external and embedded subtitles for movie files. Subtitles on Blu-ray and DVD discs/folders cannot be changed via this setting.

Font style

**Note:** this feature is not supported on videos that have a resolution greater than 2560 x 1440, or when the output display is greater than 2560 x 1440.

- Font: from the drop-down select the font face and size you want to use for the subtitle text. Note that these font settings will also be used for closed
captions text when enabled.

- **Font color**: if required, set the color of the subtitle text. Note that this font color will also be used for closed captions text when enabled.
- **Border color**: if required, set a border color for the subtitle text. Doing this can make subtitles more readable if the text color falls on a similar color on the video.
- **Position**: use the arrows to set the position of the subtitles on the screen. The higher the percentage, the closer to the top of the screen they will appear.

**Default encoding**

- if required, select the language encoding for non-Unicode subtitle files.

**Imported file settings**

*Note: these settings only apply to the imported/embedded subtitle file that is currently being used during playback.*

- **Current file**: this field displays the location and subtitle file that was imported and is currently being used for playback.
- **Encoding**: if required, select the language encoding used on the imported subtitles.
- **Delay for**: if you find that the subtitles are appearing ahead of the dialog, use the up arrow to delay them a specified amount of time. If the subtitles are behind the dialog, use the down arrow enter a negative value, advancing the subtitles the specified amount of time.

**More Closed Captions Settings**

Click the **More Closed Captions Settings** button in the Subtitles and Closed Captions Settings window to customize how closed captions on DVDs and Blu-ray Discs are displayed. The available settings are as follows:

- **Apply custom font style, size and color of closed captions text for DVD and Blu-ray movies**: select this option to enable the customization of the closed captions text.
Note: once this option is selected, CyberLink PowerDVD will apply the font face, size, and color selected in the Subtitles and Closed Captions Settings window.

Border

- **Style**: from the drop-down, select the style of the closed captions text border.

**Font Background**

- **Color**: use this option to select the background color of the closed captions text. When in the Color window, select the **Opacity** of the closed captions text background color.

**Closed Captions Window Background**

- **Color**: use this option to set the color of the background that the closed captions text is displayed on. When in the Color window, select the **Opacity** of the background that the closed captions text is displayed on.

**Blu-ray Disc Settings**

On the **Blu-ray Disc** settings tab* you can configure the settings for the playback of Blu-ray Disc titles. The available settings are as follows:

*Note: * this feature is not available in some versions of CyberLink PowerDVD.

**Blu-ray country and region setting**

Some Blu-ray Disc titles may have features that are country specific and are enabled only when that country is selected. Selecting a country specifies which region your Blu-ray Disc drive is set to. Setting it to a region means that you can only play titles from that region with your disc drive and CyberLink PowerDVD.

*Note: you may only change the region setting of your disc drive a maximum five times.*

In the drop-down, select a specific country that you want CyberLink PowerDVD to use. Select **System Location** if you want use the same country as your operating system uses.
Region code

This section informs you how many more times you can change the Blu-ray country and region setting of your computer's Blu-ray Disc drive. The maximum is five times, and every time you change the Blu-ray country and region setting above, this number decreases by one.

More Blu-ray Disc settings

Click the More Settings button to access additional settings, such as configuring the BD-Live settings, setting hybrid disc playback behavior, and more. See More Blu-ray Disc Settings for more detailed information.

More Blu-ray Disc Settings

Click the More Settings button in Blu-ray Disc settings to access additional settings, such as configuring the BD-Live options, setting hybrid disc playback behavior, and more.

More Blu-ray Disc Settings is composed of two tabs: Miscellaneous and Hybrid Disc. The available settings on them are as follows:

Miscellaneous

On the Miscellaneous tab you can set the BD-Live options, enable Blu-ray 3D support, disable Windows Aero, and more.

- **Enable network for BD-Live**: select this option if you want to allow Blu-ray Discs to access and download extra BD-J content from the Internet. Disable this option for faster Blu-ray Disc start-up time.

- **Enable BD-J keyboard support**: select this option to enable keyboard support for BD-J content.

  **Note**: enabling this feature disables all existing CyberLink PowerDVD hotkeys.

- **Allow connection when certification is invalid**: when accessing BD-J content on a Blu-ray Disc, if the disc's digital signature is not recognized or is invalid, CyberLink PowerDVD will ask you if you want to continue the connection to
the Internet. This is because the content may be unsafe. If you select this option, CyberLink PowerDVD will continue with the connection to the BD-Live site without prompting you.

- **Enable Blu-ray 3D* support**: select this option if you want to play back Blu-ray 3D Discs in CyberLink PowerDVD. Deselect it if you want to disable Blu-ray 3D playback.

  *Note: *this feature is not available in some versions of CyberLink PowerDVD.*

- **Allow PowerDVD to automatically disable Windows Aero to optimize Blu-ray Disc playback**: when playing Blu-ray Discs on a Windows 7/Vista computer, select this option to automatically disable Windows Aero to optimize Blu-ray Disc playback to improve performance. Once playback is stopped, CyberLink PowerDVD re-enables Windows Aero.

**Hybrid Disc**

On the Hybrid Disc tab you can set the default behavior of CyberLink PowerDVD when a hybrid disc is in your disc drive.

**Hybrid disc**

- **When a hybrid Blu-ray Disc is inserted**: from the drop down, select the behavior of CyberLink PowerDVD when a hybrid (DVD/Blu-ray Disc) disc is inserted into the disc drive. Select **Play Format Based on Type of Disc Drive** if you want CyberLink PowerDVD to play the Blu-ray Disc format if a hybrid disc is inserted in a Blu-ray Disc drive. Select **Always Play DVD Video** if you want CyberLink PowerDVD to play the DVD video.

**CyberLink Cloud Settings**

On the **CyberLink Cloud* settings tab you can select the sync options for CyberLink Cloud, set the default download folders, and configure how CyberLink PowerDVD converts media before uploading it.

*Note: *this feature is not available in some versions of CyberLink PowerDVD.*
CyberLink Cloud settings is composed of two tabs: General and Conversion.

General Settings

On the General tab, the available settings are as follows:

Sync options

- **Sync when PowerDVD is not running (background sync):** deselect this option if you want CyberLink PowerDVD to only sync media in the media library with media on CyberLink Cloud when the program is running.

- **Stop sync when battery is below 20%:** select this option if you want CyberLink PowerDVD to automatically stop syncing media when your laptop's/notebook's battery life drops below 20% capacity.

Download folders

- if required you can set the folders on your computer's hard drive where CyberLink Cloud media is downloaded to. To change a folder, just click the Browse button, navigate to the folder where you want to store the downloaded media, and then click Select Folder.

- **Clear CyberLink Cloud cache:** click the Clear Offline Cache button to free up some disk space by emptying the temp files stored when downloading content from CyberLink Cloud.

Conversion Settings

On the Conversion tab, the available settings are as follows:

- **Convert videos for portable devices before uploading:** select this option if you want CyberLink PowerDVD to change the resolution of the videos before uploading them to CyberLink Cloud. Once selected, select the desired video Resolution from the drop-down.

- **Convert photos to JPEG format for portable devices before uploading:** select this option if you want CyberLink PowerDVD to change the resolution of the photos before uploading them to CyberLink Cloud. Once selected, select the desired photo Resolution from the drop-down.
• Convert music files to AAC format before uploading for the best listening experience on Android/iOS devices: select this option if you want CyberLink PowerDVD to change the bitrate of the music files before uploading them to CyberLink Cloud. Once selected, select the desired music Bitrate from the drop-down.

**Hotkeys/Mouse Wheel Settings**

On the **Hotkeys/Mouse Wheel** settings tab you can set the function behavior for some specific keyboard hotkeys, and the mouse wheel, during media playback. The available settings are as follows:

**Keyboard hotkeys**

- **Ctrl + Right/Left**: from the drop down, select the CyberLink PowerDVD behavior when you hold down the Ctrl key on your keyboard and then press the right or left arrow key.

  **Note:** during the playback of video files only, this hotkey is also available by pressing just the right/left arrow key.

- **Shift + Right/Left**: from the drop down, select the CyberLink PowerDVD behavior when you hold down the Shift key on your keyboard and then press the right or left arrow key.

- **Alt + Right/Left**: from the drop down, select the CyberLink PowerDVD behavior when you hold down the Alt key on your keyboard and then press the right or left arrow key.

**Mouse wheel hotkeys**

- **Mouse Wheel**: from the drop down, select the CyberLink PowerDVD behavior when you use a mouse's scroll wheel during playback.

- **Ctrl + Mouse Wheel**: from the drop down, select the CyberLink PowerDVD behavior when you hold down the Ctrl key on your keyboard and then use a mouse's scroll wheel during playback.

- **Shift + Mouse Wheel**: from the drop down, select the CyberLink PowerDVD behavior when you hold down the Shift key on your keyboard and then use a mouse's scroll wheel during playback.

CyberLink PowerDVD

Movie Info Settings

On the Movie Info settings tab you can configure CyberLink PowerDVD's interaction with the CyberLink's movie information web service.

Auto sign in

This option lets you decide whether you want to automatically sign in to MoovieLive every time CyberLink PowerDVD is launched.

- Select **Automatically sign in** and then enter your **E-mail** and **Password** so you can always enjoy the benefits MoovieLive has to offer.

  **Note:** if you don't have a user name and password, select **Sign Up to get one now.**

Movie Info features

- Select the **Enable advanced features** option to enable the advanced features and benefits of the movie information service in CyberLink PowerDVD, including the downloading of disc information when a disc is inserted and more.

  **Note:** when you enable advanced features, you are asked to agree to the MoovieLive privacy policy. You may click on the associated link on the tab to review the privacy policy and terms of use in detail.

Default language for viewing movie data

This option lets you select the language for the movie information that is downloaded from the movie information service into CyberLink PowerDVD.

In the drop-down, select the specific language that you want CyberLink PowerDVD to use. Select **Same as UI language** to use the same language as specified on the General Settings tab. See **UI Language** for more information.
Information

The Information settings tab lets you view detailed information regarding all aspects of the disc you are playing, your computer’s disc drive and hardware configuration, and the current configuration settings CyberLink PowerDVD is using.

Note: the information displayed is completely dependent on how your individual computer is built, set up, and your current usage. In some cases, this information may only display in English.
CyberLink PowerDVD
Chapter 10:

PowerDVD Settings - Preferences

This chapter outlines the CyberLink PowerDVD Preferences. Modify these preferences if you want to customize the CyberLink PowerDVD UI, choose what media is displayed in the library, set what folders are shared on a home media network, or configure your 3D display.

You can access the Preferences tab by:

- clicking the button at the top of the window on the caption bar, and then clicking the Preferences tab.
- clicking the button on the playback controls and then selecting 3D Display, Home Media (DLNA), Media Library, or UI Customization.
- pressing Ctrl+Shift+C on your keyboard, and then clicking the Preferences tab.

UI Customization Preferences

On the UI Customization preferences tab you can set the PowerDVD wallpaper, and customize what items and features are displayed on the media panel, caption bar, Movies/TV tab, and playback controls.

UI Customization preferences is composed of three tabs: Wallpaper, Media Panel and Others.

Wallpaper

CyberLink PowerDVD lets you customize the UI wallpaper for your player. You can download wallpaper from MoovieLive or create your own. The available preferences are as follows:

**Get new wallpaper for your PowerDVD**

Click one of the wallpaper thumbnails, or the View More link, to download the
latest custom PowerDVD wallpaper from MoovieLive. Once downloaded, click on the .pbgz file to install it and make it available in the My wallpaper section.

**Note:** you can also check the Notification Center for information on the latest wallpaper available from CyberLink. Just click the button and then click in the Latest wallpaper from MoovieLive section to view the latest available.

### Create your own wallpaper

Click the Create button to import your own image from your computer to create a custom PowerDVD wallpaper. Just browse to the image you want to use, and then click Open to create the new wallpaper and make it available in the My wallpaper section.

**Note:** you can also right click on a photo in the PowerDVD media library and select Set as PowerDVD Wallpaper to create your own wallpaper.

### Select wallpaper to set as PowerDVD background

To set wallpaper as the PowerDVD background, just select it in either the PowerDVD default wallpaper section or the My wallpaper section. Click OK to apply the change.

### Media Panel

On the Media Panel tab you can customize what items and features are displayed on the media panel. The available preferences are as follows:

#### Customize items displayed on the media panel

In the available list, select the items you want displayed on the media panel of CyberLink PowerDVD. Deselect the ones you want to hide.

**Media Library**

By default all of the media library tabs are displayed in CyberLink PowerDVD, and you cannot hide them.
CyberLink Cloud*
Select this item if you want CyberLink PowerDVD to display the CyberLink Cloud tab, providing access CyberLink’s cloud service.

My Computer
Select this item if you want CyberLink PowerDVD to display the My Computer tab, providing access to all of the folders on your computer’s hard drive.

Playlists
Select this item if you want CyberLink PowerDVD to display the Playlists tab, providing access to your media playlists. If selected, you can then specify which playlists are displayed/hidden on this tab.

Online Video
Select this item if you want CyberLink PowerDVD to display the Online Video tab, providing access to Facebook and YouTube. If selected, you can then specify which of these social media web sites are displayed/hidden on this tab.

Devices & Home Media (DLNA)
Select this item if you want CyberLink PowerDVD to display the Devices & Home Media tab, providing access to and showing all of the devices and home media clients that are connected to your computer. If selected, you can then specify what type of devices are displayed/hidden on this tab.

Note: *this feature is not available in some versions of CyberLink PowerDVD.

Others
On the Others tab you can customize what items and features are displayed on the caption bar, Movies/TV tab, and playback controls. The available preferences are as follows:

Customize items displayed on the caption bar

Switch to Cinema Mode
Select this item if you want to display the Switch to Cinema Mode icon on the
CyberLink PowerDVD

caption bar. Clicking it that launches the Cinema mode of CyberLink PowerDVD.

**Show Help**

Select this item if you want to display the help icon on the caption bar. Clicking it provides access to this help file.

**Customize items displayed on the Movies/TV tab**

In the available list, select the items you want displayed on the Movies/TV tab in the media library. Deselect the ones you want to hide.

*Note:* by default the BD/DVD Movie and Movie Info sections are displayed in CyberLink PowerDVD, and you cannot hide them.

**Movie Library**

Select this item if you want to display the Movie Library section in the media library.

**TV Shows**

Select this item if you want to display the TV Shows section in the media library.

**Customize items displayed on the playback controls**

**Open with**

Select this item if you want the **Open with** function to be available when you click the button when viewing photos and playing slideshows.

**E-mail**

Select this item if you want the **E-mail** function to be available when you click the button when viewing photos and playing slideshows.

**Print**

Select this item if you want the **Print** function to be available when you click the button when viewing photos and playing slideshows.
Play To

Select this item if you want to display the button on the playback controls.

Share on Facebook

Select this item if you want to display the Facebook option in the share menu.

Upload to YouTube

Select this item if you want to display the YouTube option in the share menu.

Share on Vimeo

Select this item if you want to display the Vimeo option in the share menu.

Share on Flickr

Select this item if you want to display the Flickr option in the share menu.

Enable/Disable 3D

Select this item if you want to display the button on the playback controls.

Play Speed Navigator

Select this item if you want to be able to access the Play Speed Navigator when you click the rewind or fast forward button during playback. See Play Speed Navigator for more information.

Video Mark In/Out

Select this item if you want to be able to access the video mark in/out feature during video playback. See Video Mark In/Out for more information.

Media Library Preferences

On the Media Library preferences tab you can set which folders on your computer and connected network devices CyberLink PowerDVD imports media from. By doing this, you can control what media is displayed in each tab in the media library.

Media Library preferences is composed of four tabs: Movies, TV Shows, Videos/Photos, and Music.
Movies

Click on the Movies tab to set what folders CyberLink PowerDVD imports movie files from. Movie files are DVD/Blu-ray Disc* folders and individual video files (movie files you recorded with a PVR) that are stored on your computer's hard drive and connected network devices.

The movie files in the folders you specify are imported into the Movie Library section of the media library. See Movies/TV in the Media Library for more information.

Movie library

In the Movie library list are the folders that CyberLink PowerDVD imports supported movie files from. See Supported Movie File/TV Show Formats for a list of the supported file formats.

**Note:** these folders are continuously scanned for new media, so if you add or remove media from them, the PowerDVD media library is updated automatically.

To add folders to the movie library, do this:

1. Click the Add Movie Folder button.
2. Browse to the folder you want to add. The folders can be on your computer's hard drive or on a connected network device.
3. Click the Select Folder button to add it to the list.
4. Repeat the above steps to add more folders if necessary.
5. If required, select the Ignore videos that are under option and enter a duration in minutes in the field provided. This will help to filter out shorter home or other videos you may not want in your movie library.
6. If required, select the Show disconnected media option if you want to see movie files on disconnected network devices in the media library.
7. Once you are done adding folders, click OK to close the Media Library preferences window. CyberLink PowerDVD will scan the folder and import all the supported movie files.

**Note:** if you want to remove a folder from the movie library, hover your mouse over the folder in the list and then select .
**TV Shows**

Click on the **TV Shows** tab to set what folders CyberLink PowerDVD imports TV shows from. TV shows are video files recorded with a PVR and saved on your computer's hard drive and connected network devices.

The TV shows in the folders you specify are imported into the **TV Shows** section of the media library. See [Movies/TV in the Media Library](#) for more information.

**TV show library**

In the TV show library list are the folders that CyberLink PowerDVD imports supported TV shows from. See [Supported Movie File/TV Show Formats](#) for a list of the supported file formats.

*Note: these folders are continuously scanned for new media, so if you add or remove media from them, the PowerDVD media library is updated automatically.*

To add folders to the TV show library, do this:

1. Click the **Add TV Show Folder** button.
2. Browse to the folder you want to add. The folders can be on your computer's hard drive or on a connected network device.
3. Click the **Select Folder** button to add it to the list.
4. Repeat the above steps to add more folders if necessary.
5. If required, select the **Ignore videos that are under** option and enter a duration in minutes in the field provided. This will help to filter out shorter home or other videos you may not want in your TV show library.
6. If required, select the **Show disconnected media** option if you want to see TV shows on disconnected network devices in the media library.
7. Once you are done adding folders, click **OK** to close the Media Library preferences window. CyberLink PowerDVD will scan the folder and import all the supported movie files.

*Note: if you want to remove a folder from the TV show library, hover your mouse over the folder in the list and then select**
Organizing TV Shows

For easing browsing, TV shows are organized by series and season. CyberLink PowerDVD does this automatically based on the TV show file and folder names. For best results, ensure the TV show file and folder names are as follows:

- the TV show name should be in either the file name or in the name of the file's parent folder.
- where "XX" indicates the season number, it should be in either the file name as "SXX", or as "Season XX" the file's parent folder.
- where "YY" indicates the episode number, it should be in either the file name as "YY" or "EYY".

Naming Examples

The following are some examples of how you can organize your TV shows so that they are organized properly in the TV show library:

<table>
<thead>
<tr>
<th>Top Folder Name</th>
<th>Parent Folder Name</th>
<th>File Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>--</td>
<td>TV Shows</td>
<td>The.PowerDVD.Show.S01E01.MP4, The.PowerDVD.Show.S01E02.MP4,</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The.PowerDVD.Show.S02E01.MP4,</td>
</tr>
<tr>
<td></td>
<td></td>
<td>...</td>
</tr>
<tr>
<td>TV Shows</td>
<td>The PowerDVD Show</td>
<td>S01E01.MP4, S01E02.MP4, S02E01.MP4,</td>
</tr>
<tr>
<td></td>
<td></td>
<td>...</td>
</tr>
<tr>
<td>The PowerDVD Show</td>
<td>Season 1</td>
<td>E01.MP4, S01E02.MP4,</td>
</tr>
<tr>
<td></td>
<td></td>
<td>...</td>
</tr>
<tr>
<td>The PowerDVD Show</td>
<td>Season 1</td>
<td>01.MP4, 02.MP4,</td>
</tr>
</tbody>
</table>

**Note:** if there is additional text in the file name between the episode number and file extension, it will be ignored and not displayed in the TV show library.
Videos/Photos

Click on the Videos/Photos tab to set what folders CyberLink PowerDVD imports videos and photos from. It is recommended that you import video files that are home movies, or other short clips, that you may not want to include in the Movie Library section. See Videos in the Media Library for more information.

The photos you choose to import are available for slideshows, sharing, and other features. See Photos in the Media Library for more information.

Video/Photo libraries

In the Video/Photo libraries list are the folders that CyberLink PowerDVD imports supported video files and photos from. See both Supported Video File Formats and Supported Photo Formats for a list of the supported file formats.

Note: these folders are continuously scanned for new media, so if you add or remove media from them, the PowerDVD media library is updated automatically.

To add folders to the video and photo libraries, do this:

1. Click the Add Video/Photo Folder button.
2. Browse to the folder you want to add. The folders can be on your computer's hard drive or on a connected network device.
3. Click the Select Folder button to add it to the list.
4. Repeat the above steps to add more folders if necessary.
5. If required, select the either of the following import options:

   • Ignore photo files less than: select this option if you do not want to import photo files that are less than the size you select from the drop-down.

   • Ignore video files less than: select this option if you do not want to import video files that are less than the size you select from the drop-down.

6. If required, select the Show disconnected media option if you want to see videos/photos on disconnected network devices in the media library.

7. Once you are done adding folders, click OK to close the Media Library preferences window. CyberLink PowerDVD will scan the folder and import all the supported video files and photos.
**Note:** if you want to remove a folder from the video or photo library, hover your mouse over the folder in the list and then select 🗑.

## Music

Click on the **Music** tab to set what folders CyberLink PowerDVD imports audio files from. You can import any type of audio file into the music library that is a supported format, but the files are imported into the **Music** tab of the media library. See [Music in the Media Library](#) for more information.

### Music library

In the Music library list are the folders that CyberLink PowerDVD imports supported music from. See [Supported Audio Formats](#) for a list of the supported file formats.

**Note:** these folders are continuously scanned for new media, so if you add or remove media from them, the PowerDVD media library is updated automatically.

To add folders to the music library, do this:

1. Click the **Add Music Folder** button.
2. Browse to the folder you want to add. The folders can be on your computer’s hard drive or on a connected network device.
3. Click the **Select Folder** button to add it to the list.
4. Repeat the above steps to add more folders if necessary.
5. If required, select the **Show disconnected media** option if you want to see music files on disconnected network devices in the media library.
6. Once you are done adding folders, click **OK** to close the Media Library preferences window. CyberLink PowerDVD will scan the folder and import all the supported audio files.

**Note:** if you want to remove a folder from the music library, hover your mouse over the folder in the list and then select 🗑.
Home Media (DLNA) Preferences

On the Home Media (DLNA) preferences tab* you can make media in the media library available on a network and allow other network devices to stream media to your computer's CyberLink PowerDVD.

* this feature is not available in some versions of CyberLink PowerDVD.

Home Media (DLNA) preferences is composed of two tabs: Access Control and Folder Sharing.

Access Control

On the Access Control tab you can allow other network devices to stream media to your computer's CyberLink PowerDVD, and enable the sharing of media in your library on a network. The available preferences are as follows:

- **Allow other home media computers or devices to play their media content to this PowerDVD**: select this option to give permission to a network computer/device to play media with CyberLink PowerDVD on the current computer.

- **Stream contents of PowerDVD library to other home media computers or devices**: select this option if you want to share the media in the media library with computers and devices connected to the same network. Once selected, select one of the following two options:
  - **Stream to all home media devices**: select this option if you want to share the media in the library with all of the computers and devices connected to the network.
  - **Stream only to the devices selected below**: if you only want to share media with certain computers and devices, select this option. Next, select each of the devices in the list that you want to share the media with and then click to add it to the Allowed list.

* if a computer or device you want to share is not displayed in either list, ensure it is enabled and connected to the network. Then click to refresh the list of home media computers and devices.
Folder Sharing

On the Folder Sharing tab you can set which folders in the media library are available on a network. The available preferences are as follows:

- **All the media in the library**: select this option if you want to share all of the media that is in the media library.
- **Only the selected folders below**: select this option if you want to specify which media library folders are shared. You share them by selecting them from available the list.

3D Display Preferences

On the 3D Display* preferences tab you can enable 3D playback, set up your 3D display device, and more.

3D Display preferences is composed of two tabs: General and Display Device.

General

On the General tab, set the 3D display configuration. The available preferences are as follows:

Play 3D media in 3D

Select this option to auto enable playback of all 3D media (3D** Blu-ray Disc or DVD, 3D video file, 3D photos). Once enabled, CyberLink PowerDVD will automatically play 3D media in 3D once playback starts. Once enabled, you won't need to enable 3D playback every time you play 3D media.

**Note: **if your version of CyberLink PowerDVD supports 3D Blu-ray Disc playback, you may have to enable playback in settings. See Blu-ray 3D for information on enabling it.
Convert 2D media to 3D

Select this option if you want CyberLink PowerDVD to convert all 2D media (2D Blu-ray Discs, DVDs, video files, YouTube videos, photos) to 3D using TrueTheater 3D when playback starts. Once enabled, you won’t need to enable 3D playback every time you want to convert 2D media.

- **3D scene depth**: if required, use the slider to adjust the amount of 3D scene depth on the video image, until the resulting 3D image is optimized for your specific setup and viewing experience. The 3D scene depth slider can be used to adjust the scene depth on both native 3D and TrueTheater 3D converted content.

Swap eye view

During the playback of 3D content, if you begin to feel uncomfortable or uneasy, it may be because the layout of the 3D image is displayed differently than most standard content. If this occurs, try selecting the opposite eye view. This switches the way the 3D content is displayed on your display device, and may reduce the discomfort.

Display Device

On the Display Device tab you can set up your 3D display device. The available preferences are as follows:

Choose 3D display

- **Auto detect**: select this option to have CyberLink PowerDVD automatically detect your device for you. If you do not have a 3D display, CyberLink PowerDVD plays 3D content in Anaglyph Red/Cyan mode and then you can watch content in 3D with anaglyphic (red/cyan) 3D glasses.

- If you want to manually select your 3D display device, select the other radio button and then select it from the drop-down menu. If you do not have a 3D display device, select **Anaglyph Red/Cyan Mode** and then use anaglyphic (red/cyan) 3D glasses to watch 3D content.
# Chapter 11: PowerDVD Hotkeys

This section lists all the hotkeys that are available in CyberLink PowerDVD.

<table>
<thead>
<tr>
<th>Hotkey</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>'</td>
<td>Access the Play Speed Navigator.</td>
</tr>
<tr>
<td>B or [</td>
<td>Reverse through media content. Press repeatedly to increase the reverse speed.</td>
</tr>
<tr>
<td>E or ,</td>
<td>Pause playback and go to the previous frame of video. Press repeatedly to step backward through media one frame at a time.</td>
</tr>
<tr>
<td>P</td>
<td>Return to previous chapter or media file in a playlist/folder. Also return to previous song on a music disc.</td>
</tr>
<tr>
<td>S</td>
<td>Stop playback.</td>
</tr>
<tr>
<td>Space bar</td>
<td>Play/pause media playback.</td>
</tr>
<tr>
<td>N</td>
<td>Go to the next chapter or media file in a playlist/folder. Also go to next song on a music disc.</td>
</tr>

</tr>
</tbody>
</table>

#### Extra Hotkeys for Special Keyboards

- **Apps**: Displays context menu.
- **Previous**: Time seek previous five seconds.
- **Next**: Time seek next five seconds.
- **Select**: Accepts the selected option.
### User Defined
(Can be customized in **Hotkeys/Mouse Wheel Settings**)

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ctrl+Right/Left arrow key</td>
<td>Skip forward 30s/backward 8s (default).</td>
</tr>
<tr>
<td>Shift+Right/Left arrow key</td>
<td>Skip forward/backward 2 min (default).</td>
</tr>
<tr>
<td>Alt+Right/Left arrow key</td>
<td>Skip forward/backward 5 min (default).</td>
</tr>
<tr>
<td>Mouse wheel</td>
<td>Increase/decrease volume (default).</td>
</tr>
<tr>
<td>Ctrl+Mouse wheel</td>
<td>Instant zoom (default).</td>
</tr>
<tr>
<td>Shift+Mouse wheel</td>
<td>Fast forward/rewind (default).</td>
</tr>
</tbody>
</table>

**Note:** **increase/decrease brightness amount is dependent on display device's capability. Some display devices do not support the brightness adjustment by CyberLink PowerDVD.**

Python 27

CyberLink PowerDVD uses Python, related license files are available in C:\Program
Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\python27/*.txt and in C:
\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\python27
\from_pydocs\*.html.

Pthreads-win32

Cyberlink H.264 video decoder is a software work uses open-source PThread library
(namely PThreadVC2.dll) which is under LGPL (GNU Lesser General Public License).

0. Pthreads-win32 license file only deals with license of PThread library, not
including the license of other parts of Cyberlink H.264 video decoder. The
Pthreads-win32 license file could be found in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\pthreads-win32/copying.html.

1. The PThread library is available at http://sources.redhat.com/pthreads-win32/.

2. One copy of LGPL is provided in C:\Program Files\CyberLink\PowerDVD15 \Custom\Setting\FreeLicenses\licenses\gpl-2.1.txt. It is also available at http://www.gnu.org/copyleft/lesser.html.

**Intel OpenCV**

CyberLink PowerDVD uses Intel Open Source Computer Vision Library. The License Agreement For Open Source Computer Vision Library is in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\opencv\license.txt.

**simplejson**

CyberLink PowerDVD uses simplejson. It's licensed under MIT License which is attached in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\simplejson\license.txt.

**CSystemTray**

CyberLink PowerDVD uses "CSystemTray" in code project. It's licensed under CPOL license. Related files are located in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\systemtray and C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\licenses/CPOL.html.

**boost C++ Libraries**

CyberLink PowerDVD uses boost C++ Libraries. It's licensed under boost license.

Related file is located in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\licenses\boost_license_1_0.txt.
**multiprocessing**

CyberLink PowerDVD uses multiprocessing. It's licensed under BSD license. Related files are located in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\multiprocessing\license.txt.

**oauth2**

CyberLink PowerDVD uses oauth2. It's licensed under MIT License which is attached in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\oauth2\LICENSE.txt.

**httplib2**

CyberLink PowerDVD uses httplib2. It's licensed under MIT License which is attached in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\httplib2\license.txt.

**beautifulsoup**

CyberLink PowerDVD uses beautifulsoup. It's licensed under Creative Commons License which is attached in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\beautifulsoup\license.txt.

**socksipy**

CyberLink PowerDVD uses socksipy. It's licensed under BSD style License which is attached in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\socksipy\license.txt.

**Monkey’s Audio**

CyberLink PowerDVD uses "Monkey’s Audio" as source filter in code project. The Monkey's Audio license file could be found in C:\Program Files\CyberLink\PowerDVD15\Custom\Setting\FreeLicenses\Monkeys Audio\license.
CyberLink PowerDVD

html.

**SQLite3**

CyberLink PowerDVD uses "SQLite3" as database engine in code project. The SQLite3 license file could be found in C:\Program Files\CyberLink\PowerDVD15 \Custom\Setting\FreeLicenses\licenses\sqlite3_copyright-release.html.

**rapidjson**

CyberLink PowerDVD uses rapidjson. It's licensed under MIT License which is attached in C:\Program Files\CyberLink\PowerDVD15 \Custom\Setting\FreeLicenses\licenses\license_rapidjson.txt.
Chapter 13:

Technical Support

If you require technical support, then this chapter can help. It includes all the information you need to find the answers you are looking for. You may also find answers quickly by contacting your local distributor/dealer.

Before Contacting Technical Support

Before contacting CyberLink technical support, please take advantage of one or more of the following free support options:

- consult the user’s guide or the online help installed with your program.
- refer to the Knowledge Base at the following link on the CyberLink web site: http://www.cyberlink.com/support/search-product-result.do
- check the Help Resources page in this document.

When contacting technical support by e-mail or phone, please have the following information ready:

- registered product key (your product key can be found on the software disc envelope, the box cover, or in the e-mail received after you purchased CyberLink products on the CyberLink store).
- the product name, version and build number, which generally can be found by clicking on the product name image on the user interface.
- the version of Windows installed on your system.
- list of hardware devices on your system (capture card, sound card, VGA card) and their specifications. For fastest results, please generate and attach your system info using the DxDiag.txt.

**Note:** here are the steps to generate the system info DxDiag.txt file: Click Windows (start) button, and then search for "dxdiag". Click Save All Information button to save the DxDiag.txt file.

- the wording of any warning messages that were displayed (you may want to write this down or take a screen capture).
• a detailed description of the problem and under what circumstances it occurred.

**Web Support**

Solutions to your problems are available 24 hours a day at no cost on the CyberLink web site:

*Note: you must first register as a member before using CyberLink web support.*

CyberLink provides a wide range of web support options, including FAQs, in the following languages:

<table>
<thead>
<tr>
<th>Language</th>
<th>Web Support URL</th>

**Help Resources**

The following is a list of help resources that may assist you when using any of CyberLink's products.

• Access CyberLink's **Knowledge base** and **FAQ** (frequently asked questions): http://www.cyberlink.com/cs-resource

• View **video tutorials** for your software: http://directorzone.cyberlink.com/tutorial/
• Ask questions and get answers from our users on the **CyberLink Community Forum**: http://forum.cyberlink.com/forum/forums/list/ENU.page

  **Note:** CyberLink’s user community forum is only available in English and German.
