Ranger X Windows USB driver setup

Prerequisites:

1. Micro USB to USB male cable

2. Android USB driver modified for Ranger X.

Setup:

1. Acquire USB driver and extract contents to local folder on Windows system.

2. Attach micro side of USB cable to Ranger X.

3. Attach remaining full size USB end to Windows system.

4. Open device manager select the Tomcat-U. Double-click the TomCat-U device.

5. Select update driver.
6. Select to browse computer for driver software. Browse location of the extracted USB driver. If prompted, select to install this driver software anyway.

7. Click to close the below dialog. At this point remove and re-attach the USB cable from the Windows system.
Ranger X Windows USB driver setup

Windows has successfully updated your driver software.

Windows has finished installing the driver software for this device.
