Publication information

PN: 95-01085, Rev. A
July 2008
Declaration of conformity

DECLARATION OF CONFORMITY according to FCC Part 15
Responsible Party Name: Xplore Technologies Corp.
Address: 14000 Summit Drive, Suite 900, Austin, Texas 78728
Telephone: 512.336.7797

Declares that product: Model Series: iX104C4 complies with Part 15 of the FCC Rules.
This device complies with Part 15 of the FCC rules. Operation is subject to the
following two conditions: (1) This device may not cause harmful interference, and, (2)
This device must accept any interference received, including interference that may
cause undesired operation.

WARNING
Changes or modifications to this unit not expressly approved by the party responsible for
compliance may void the user's authority to operate this equipment.

For more information about FCC rules and their applicability to the iX104, see
Appendix E, “Agency Notices.”

Warranty information

The iX104C4 is backed by a standard 36-month International Limited Warranty. An
extended International Limited Warranty is available. Check the service kit included
with your computer for warranty terms and conditions.

Important safety information

Before you use the iX104C4 (referred to as the tablet), read these safety
instructions and the operation instructions in this handbook.

Failure to observe all these instructions voids the Limited Warranty and may lead
to suspension or denial of services to the offender, or legal action, or both.
Follow any special regulations governing the use of the tablet and, if radio-enabled,
always switch it off in areas where radio devices are forbidden or when the radio device
can cause interference or danger.
Always follow any safety laws and regulations pertaining to the use of cell phones and
two-way radios, because these laws and regulations typically apply to the use of the
wireless-enabled tablet.
Observe all restrictions on the use of radio equipment in fuel depots (fuel storage and
distribution areas), chemical plants, and wherever blasting operations are in progress or
in any area in which restrictions on radio transmissions are imposed.
Switch off the tablet when in an aircraft. The tablet is not FAA-approved for use on
aircraft. The effect of the use of the tablet in aircraft is unknown. Using the tablet in an
aircraft may affect aircraft instrumentation, communication, and performance; may
disrupt the network; and may be illegal.
Operating the wireless-enabled tablet may interfere with the functioning of
inadequately protected medical devices such as pacemakers. Consult a physician or the
manufacturer of the medical device if you have any questions.
Radio signals from your tablet will not affect the operation of most modern equipment, but certain electronic equipment, including automotive systems, may not be shielded against radio signals from your tablet. Check with the manufacturer of your motor vehicle or the manufacturer’s representative to determine whether using the tablet will present any safety issues.

Avoid using the tablet in any environment that requires your full attention, such as when driving a vehicle. If you need to use your tablet while driving, have a passenger use it for you or find a safe location to halt your vehicle.

**WARNING**

Use only battery types specified in this handbook. Using any other type of battery can be dangerous and can disable the tablet.

**WARNING**

Do not use any dock or any other accessory or attachment that is not manufactured or supplied by Xplore or an authorized Xplore accessories supplier. Use of any accessory or attachment that is not supplied or approved for use with the tablet by Xplore is not permitted because it may cause hazards.

Operate the tablet only from the type of power source indicated on the marking label. (See page 54 for more information about the battery and power supply.) Route power supply cords so that they are not likely to be walked on or pinched by items placed upon or against them. Pay particular attention to cords at plugs and convenience receptacles, and at the point where cords exit from the tablet or its dock. Do not overload wall outlets, extension cords, or integral convenience receptacles because this can cause fire or electric shock.

Unplug the tablet and refer the tablet and dock for service to qualified service personnel if any of the following conditions occur:

- The power supply cord or plug is damaged.
- The tablet or dock does not operate normally when you follow the instructions in this book.
- The tablet or dock exhibits a distinct change in performance.

Adjust only controls for which there are instructions in this book. An improper adjustment of other controls can result in damage and may require extensive work by a qualified technician to restore the tablet or dock to normal operation.

**CAUTION**

Avoid prolonged physical contact with the exposed metal surfaces on the front and back of the tablet. While the tablet may not feel hot to the touch, if you maintain physical contact with the tablet for a long time (for example, if you rest the tablet on your lap for a long time), your skin may suffer low-heat injury. In addition, be careful when you remove a PC card that has been used for a long time, because the card may be hot.
Welcome

Welcome to the Xplore Technologies® iX104C™ tablet PC, the rugged tablet designed, tested, and manufactured to meet the environmental and physical real-world challenges faced by today’s mobile workers. Based on years of experience in rugged mobile applications, the iX104C is designed to withstand the abuses of everyday wear and tear.

Advanced technology, innovative design, and a rugged case are just a few highlights of your iX104C system.

Note: This handbook assumes that you have basic experience using computers and Microsoft® Windows®.
About your computer

The iX104C⁴ is a high-performance tablet PC that runs on Microsoft Windows XP® Professional Tablet PC Edition and Vista Business operating systems.

The method you use to control the tablet depends on the tablet model, as follows:

<table>
<thead>
<tr>
<th>Tablet Model</th>
<th>Digitizer/Touchscreen</th>
<th>Control Method</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

Note: In this handbook, all information applies to all models unless otherwise noted.
All iX104C4 tablets have been engineered and tested to meet Military Standards for Environmental Extremes (MIL STD 810F). Your tablet includes the following features that make it exceptionally rugged and durable:

- Durable, long-lasting, dense magnesium enclosure
- Interior and exterior multi-layer magnesium frames and cavities
- ISODAMP® shock absorbing materials in patented bumpering system and gasket protection mechanisms
- Shock-isolated hard disk
- Integrated, protected wireless LAN and WAN antennas for dual mode operation
- Locked in place memory, cables, and connectors
- Proprietary thermal management system

**Package contents**

Check to make sure your package includes the following items:

- Quick Start Guide
- Battery pack
- Power cord
- AC adapter
- Pen
- Pen tether
- iX104C4 tablet PC
- Warranty information kit
Optional accessories

Your package also includes any optional accessories you ordered.

Docking options
- xStand Desktop Docking Station
- xDock Vehicle Docking Station

Carrying cases
- Shoulder cases
- Portfolio case
- Dockable case

Storage options
- External USB floppy disk drive
- External USB CD-ROM drive

Memory
- 2 GB RAM
- 32 GB 2.5-inch solid state hard drive

Power options
- AC adapter with U.S. cord
- Main battery pack (41 watt hours)
- Extended life battery pack (55 watt hours)
- Auto adapter (cigarette lighter adapter)

Additional accessories
- USB non-rugged mini keyboard (83-key)
- USB rugged, backlit keyboard (83-key)
- Screen protectors (2-pack)
- Active stylus
- Pen tether
Contacting Xplore – service and questions

**Note:** To troubleshoot problems (including wireless and GPS problems), before you call, read the FAQ page of the Xplore Technologies Web site. Go to [http://www.xploretech.com](http://www.xploretech.com); then select Customer Support; then FAQ.

If you purchased your tablet from an authorized Xplore dealer, contact the dealer for service and support.

If you purchased your tablet directly from Xplore, use any of the following methods to contact Xplore for service and support:

<table>
<thead>
<tr>
<th>Method</th>
<th>Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Web site</td>
<td><a href="http://www.xploretech.com">http://www.xploretech.com</a></td>

<td><a href="mailto:customersupport@xploretech.com">customersupport@xploretech.com</a></td>
</tr>
<tr>
<td>Toll free</td>
<td>1-866-296-8541, extension 222</td>
</tr>
<tr>
<td>Fax</td>
<td>1-512-336-7791</td>
</tr>
</tbody>
</table>

Before you contact Xplore, have the following information ready so that the customer support representative can quickly provide a solution:

- **Product name:** iX104C4
- **Product serial number**
- **Purchase date**
- **Conditions under which the problem occurred**
- **Any error messages that were displayed**
- **Type of device connected, if any**

The serial number is on the back of the tablet. See page 21.
1 Getting Started

This chapter contains detailed instructions for using the tablet.

**Turning on the computer**

1. Make sure the computer is off.

   *When the computer is off, the Status LED is off.*

![Image of Power On/Off/Suspend/Resume button]

2. Make sure the battery is charged or that the computer is plugged into an external power source.

3. Press the Power On/Off/Suspend/Resume button.

![Image of Power On/Off/Suspend/Resume button]
Chapter 2. Using the Tablet

Turning off the computer

1. If the computer is in Suspend mode, press the Power On/Off/Suspend/Resume button to resume operation. (See page 34 for information about Suspend mode.)

2. Make sure the battery is charged or that the computer is plugged in to an external power source.

3. Save your work and close all programs.

4. From the Windows Start menu, click Turn Off Computer.

5. The Turn off computer dialog box opens.

6. Click Turn Off.

Using the Reset switch

If the computer does not seem to be accepting input and you cannot turn it off by using the method described in “Turning off the computer,” press the Reset switch. (Use the stylus or a similar instrument to press the switch.)
Suspending and resuming operation

To conserve battery power when you do not want to turn off the computer or when you need to install a charged battery pack, put the computer into Suspend mode. (You can suspend operation without closing any programs or Windows.)

When you suspend operation:

- Programs that are running stop (but do not close).
- Active data is saved.
- The system enters one of the following low-power modes:
  - Suspend-to-RAM mode – The Status LED light is continuously yellow. Active data is saved in RAM and most other components are turned off. Although the computer uses very little power when in Suspend-to-RAM mode, eventually the battery’s power does run out. If you do not plan to use the computer for an extended period of time, turn the computer off or put it in Hibernation mode instead of using Suspend-to-RAM.
  - Hibernation mode – Active data is saved on the hard disk and power usage is reduced to the same level as when the computer is turned off. In Hibernation mode, there is no danger of losing data if battery power is lost.

**Note:** For more information, see “Using power options – Windows XP” on page 58 or “Using power options – Windows Vista” on page 62.

If you have set your computer to turn power off (in the Power Options utility in Windows Control Panel), you cannot suspend operation. To change power settings, see “Using power options – Windows XP” on page 58 or “Using power options – Windows Vista” on page 62.
Suspending and resuming operation

If the Suspend action of the Power On/Off/Suspend/Resume button has been disabled to prevent accidental interruption, pressing the button does not suspend the computer. You must use a software application to suspend the computer. For more information, contact your help desk or your iX104C4 dealer.

If your computer is connected to a network, the network may automatically log you off after a period of inactivity while system operation is suspended. Contact your help desk or system administrator to learn your log-off time limit.

**Suspending operation**

Use one of the following methods to suspend operation:

**Method 1**

Press and hold the Power (On/Off)/Backlight (On/Off)/Resume button for 4 seconds.

Note: In order to suspend operation, the Suspend option must be enabled in Windows Power Options. See “Using power options – Windows XP” on page 58 or “Using power options – Windows Vista” on page 62.
Chapter 2. Using the Tablet

Suspending and resuming operation

Method 2 – Windows XP

1. From the Windows Start menu, press Turn Off Computer.
   The Turn off computer dialog box opens.
2. Press Stand By.

When operation is suspended, the Status LED displays a continuous yellow light.

Method 2 – Windows Vista

1. From the Windows Start menu, press the right arrow in the lower right corner.
2. Press Sleep.

When operation is suspended, the Status LED displays a continuous yellow light.
Chapter 2. Using the Tablet

Suspending and resuming operation

Resuming operation

To resume operation when the computer is in Suspend mode, press the Power (On/Off)/Backlight (On/Off)/Resume button.

Note: Press the button only once.

After a minute or two, the computer resumes normal operation. When the Status LED displays a continuous green light, you can begin using the computer.

Note: Resuming operation from Hibernation mode takes a little longer than from Suspend-to-RAM mode.
Using the pen

You can use the pen to select items and to navigate through programs.

**If your computer is an iX104C4:**

Use the special multi-function pen provided with the computer.

**If your computer is an iX104C4 Dual Mode:**

You can use any of the following input methods:

- **Auto-Sense mode:** Use either the multi-function pen or your finger interchangeably. The computer distinguishes between the two input modes and automatically adjusts accordingly. This is the tablet’s default state.
- **Active mode:** Use only the special multi-function pen provided with the computer.
- **Touch mode:** Use your finger or another similar pointing device.

For more information, see “Selecting Auto-Sense, Active, or Touch mode” on page 38.

**WARNING**

Do not use items such as a ball point pen or a screwdriver that can damage the tablet. Damage caused by using an item not provided with the tablet is not covered by the tablet warranty.

**Note:** During the first use of the tablet, or if the action you are trying to perform does not occur when you use the pen or your finger to touch the screen, calibrate the digitizer as described in “Calibrating the digitizer” on page 85.
Chapter 2. Using the Tablet

Using the pen

**Selecting Auto-Sense, Active, or Touch mode**

If your computer is the iX104C4 Dual Mode or iX104C4 Dual Mode AllVue Xtreme, use the **Fn-P2** key combination to select Auto-Sense mode (the default mode), Active-only mode, or Touch-only mode.

In **Auto-Sense** mode, you can use the multi-function pen provided with the tablet, your finger, or any other similar pointing device interchangeably, on the fly.

In **Active** mode, you can use only the special multi-function pen provided with the tablet.

In **Touch** mode, you can use your finger or another similar pointing device.

**Note:** The input methods available to you depend on the way your tablet has been configured. See Appendix F, “Configuring Dual Mode Tablet Digitizer Input Methods.”
Using the digitizer to perform mouse functions

<table>
<thead>
<tr>
<th>To perform this function...</th>
<th>Do this</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select an object (left button click)</td>
<td>Tap the pen tip once on the object.</td>
</tr>
<tr>
<td>Perform a double-click.</td>
<td>Quickly tap the pen tip twice on the object.</td>
</tr>
</tbody>
</table>
| Perform a right-click. | If your computer is an iX104C²:  
  Hold the pen directly on the object for 1 second. The right-click icon appears.  
  or  
  Press the right-click button on the pen while you click the object.  
  If your computer is an iX104C²Dual Mode:  
  **Touch mode:**  
  In the Windows taskbar, press the right-click icon; then click the object.  
  **Active mode:**  
  Hold the pen directly on the object for 1 second. The right-click icon appears.  
  or  
  Press the right-click button on the pen while you click the object. |
| Move or drag an object. | Place the pen tip on the object; then continue to hold the pen tip against the screen as you move the pen. |
Changing the pen double-click speed

The pen double-click speed is in sync with the mouse double-click speed. To change the speed, follow the instructions below.

Changing the pen double-click speed – Windows XP
1. Click the Windows Start button.
2. Click the Settings option.
3. Click the Control Panel option.
4. In the Control Panel window:
   If your computer is an iX104C³ Tablet PC:
      Click the Tablet and Pen Settings icon.
   If your computer is an iX104C³ Dual Mode:
      In Active mode: Click the Tablet and Pen Settings icon.
      In Touch mode: Click the Pointer Devices icon.
5. Click the Windows tab.
6. Follow the instructions that appear in the Windows tab.

Changing the pen double-click speed – Windows Vista
1. Click the Windows Start button.
2. Click the Control Panel option.
3. In the Control Panel window:
   If your computer is an iX104C⁴:
      Click the Pen and Input Devices icon.
   If your computer is an iX104C⁴ Dual Mode:
      a. Press the Pen and Input Devices icon.
      b. In the Pen Options tab, select Double-tap.
      c. Press Settings.
4. Drag the slider to a faster or slower speed; then press OK.
Positioning the pen and pen tether

The pen tether helps prevent the loss of your pen. The following illustrations show how to position the pen and pen tether.

_Tether anchored at the top_
Chapter 2. Using the Tablet

Using the pen

*Tether anchored on the side*
Using the fingerprint scanner

The fingerprint scanner and the associated Protector Suite QL software enable you to use fingerprint verification to protect the security of your data.

The first step for using fingerprint verification is to enroll your fingerprint to create an association between your username, password, and fingerprint.

After fingerprint enrollment you will be able to:

- Use your fingerprint as part of computer login security.
- Register Web pages and Windows applications to use your fingerprint instead of passwords.
- Launch applications by swiping your finger the sensor.
- Store confidential information in an encrypted form in a protected folder.

To launch the Enrollment Wizard, select:
Start > All Programs > Protector Suite QL > User Enrollment and follow the wizard’s instructions.

For more information about using the fingerprint scanner, see the Protector Suite QL User’s Guide PDF included on your hard disk in the Protector Suite QL folder.
Changing the screen orientation

To rotate the screen orientation from portrait (vertical) to landscape (horizontal) mode or from landscape to portrait mode, press the screen rotation key.
Chapter 2. Using the Tablet

Adjusting the screen brightness

Windows XP

To adjust the screen brightness, click the brightness control icon on the Windows taskbar; then use the slider bar to make the adjustment.

Windows Vista

To adjust the screen brightness:

1. Click Start.
2. Open the Control Panel.
3. Double-click the Windows Mobility Center icon.
4. Use the Display brightness slider to adjust the brightness.
Enabling automatic backlight control

When the Auto Light sensor is enabled, the computer automatically controls the amount of backlight sent to the screen to provide optimum brightness for the lighting conditions in which you are working.

To enable automatic backlight control, see page 100.
Optimizing screen settings for outdoor use

Windows XP

1. Click Start; then select Control Panel.
2. Click the Desktop tab and set the background to None.
3. In the Control Panel, click Display.
4. Click the Appearance tab.
5. From the drop-down menu, select Windows Classic.
6. From the Windows and buttons drop-down menu, select High Contrast White.
7. Click the Effects button. Make sure that Use the following method to smooth edges of screen fonts is checked and that ClearType is selected from the drop-down list. Click OK.
8. Click the Settings tab. Make sure the Screen resolution setting is 1024 by 768 pixels and that the Color quality setting is Highest (32 bit). Click OK.

Windows Vista

1. Click Start; then select Control Panel.
2. In the Control Panel, click Control Panel Home.
3. Click Appearance and Personalization.
4. Click Change desktop background. In the Location area, select Solid Colors. For the background color, select white; then click OK.
5. In the Appearance and Personalization window, click Customize Colors.
6. Select Frost. Move the Color intensity slider bar to the far right; then click OK.
Docking the tablet

If you have the optional xStand office dock or xDock vehicle dock, connect it to the tablet at the docking port. (See the iX104 Docking Stations Handbook.)

Docking port

Guide pin receptacles
Connecting devices

Refer to the following subsections for information about connecting external devices to your computer.

**Note:** If the device you want to use does not appear to be working with your computer, the device may need to be enabled in the computer’s configuration program. Contact your local help desk or Xplore reseller.

**Connecting to a local area network**

Connect a local area network (LAN) cable’s RJ-45 connector to the internal LAN interface card. (See your network system administrator for more information.)

**Connecting USB-compatible devices**

Connect any USB-compatible devices to the computer’s USB ports.

Devices must be in compliance with USB Standard Revision 2.0.
Connecting an external microphone

Adjusting microphone volume – Windows XP
If necessary, adjust the volume of the microphone as follows:
1. Press the Windows Start key; then open the Control Panel.
2. In the Control Panel window, double-click the Sounds and Audio Properties icon.
3. In the Sounds and Audio Properties window, click the Audio tab.
4. In the Sound recording area, click the Volume button.
5. Adjust the volume.
6. Click OK.

Adjusting microphone volume – Windows Vista
If necessary, adjust the volume of the microphone as follows:
1. Press the Windows Start key; then open the Control Panel.
2. In the Control Panel window, double-click the Sound icon.
3. In the Sound Properties window, click the Recording tab.
4. Select Microphone; then press Properties.
5. Select the Levels tab.
6. Adjust the microphone volume or boost.
7. Click OK.
Connecting a headphone or speakers

Adjusting headphone or speaker volume – Windows XP
1. Click the audio icon in the Status area of the Windows taskbar. The volume control area opens.
2. If the Mute check box is checked, uncheck it.
3. Move the slider bar up or down to increase or decrease the volume.

Adjusting headphone or speaker volume – Windows Vista
1. Click the audio icon in the Status area of the Windows taskbar. The volume control area opens.
2. If the Mute button indicates that sound is muted, click the button to turn on the sound.
3. Move the slider bar up or down to increase or decrease the volume.
Connecting a monitor or projection panel

Activating the monitor or projection panel

To change the video output to the monitor or projection panel:
Press the Fn-P1 key combination.

To change the video output back to the computer:

Press the Fn-P1 key combination again.
Connecting a device to the optional serial port

If your tablet includes the optional serial port, you can connect a terminal or other device that uses the RS-232, RS-422, or RS-485 data transfer standard.

Connecting an XPL snap-on expansion module
Using the battery

You can recharge, remove, and replace the battery pack.

**Charging the battery pack**

**If you do not have an external battery charger**

Follow these steps to charge the battery while it is installed in the computer:

1. Connect a power source, such as an AC adapter or cigarette lighter adapter, to the power connector on the computer.

   ![Power connector diagram]

   If the battery charge is below 90%, the battery begins charging and the Status LED flashes green. (If the battery charge is higher than 90%, the battery will not charge, preventing battery overcharge.)

2. Check the level of charge. (See “Checking battery power status” on page 60.)

   The charging process continues until the battery charge reaches 100%.
Table 4 shows the approximate time required to charge the battery level to 100%.

**Table 4  Approximate battery charge time**

<table>
<thead>
<tr>
<th>Battery pack capacity</th>
<th>Charge time</th>
</tr>
</thead>
<tbody>
<tr>
<td>41 watt hours (5700 mAh)</td>
<td>2.5 hours</td>
</tr>
<tr>
<td>55 watt hours (7600 mAh)</td>
<td>3.5 hours</td>
</tr>
</tbody>
</table>

**If you have an external battery charger**

1. Remove the battery pack (see page 55).
2. Use the external battery charger to charge the battery.
3. Install the battery (see page 57).

**Removing and installing the battery**

You can remove the battery and use an (optional) external charger to charge it.

**Removing the battery**

1. **To swap with a charged battery:**
   
   Use one of the methods described in “Suspending operation” on page 34 to suspend operation.

2. **If a charged battery is not available:**
   
   Save your work and close all running programs; then shut down the computer or put the computer in Hibernation mode (see “Suspending operation” on page 34).

   **Note:** To avoid losing unsaved data, wait until the computer has completed switching to Suspended mode before removing the battery.
Chapter 2. Using the Tablet

Using the battery

2. Use the stylus or a pen to depress the battery lock button.

3. On the computer, slide the battery release latch toward the lock button.

   The battery unlocks and slightly rises from the computer.

4. Pull the battery away from the computer and remove it.

**Note:** After removing the battery, you must replace the battery or connect the computer to an external power supply within 3 to 5 minutes or the computer completely loses power.
Installing the battery

1. Orient the battery with the slides in the empty battery tray.

2. Slide the battery into the tray and press it firmly until it is seated.

3. Slide the battery release latch to its original position.
   The lock button pops back into the locked position, securing the battery in place.

Discarding batteries

Dispose of batteries in accordance with your local government regulations. Under federal, state, or local law, it may be illegal to put batteries in the trash. Contact your system administrator, municipal waste disposal department/provider for information.
Chapter 2. Using the Tablet

Using power options – Windows XP

Displaying power options

On the Windows taskbar, click the battery icon. The Power Options Properties window opens.
Changing the computer’s power schemes

In the Power Options Properties window, select the Power Schemes tab; then select options from the drop-down lists.

Changing battery alarm settings

In the Power Options Properties window (page 58), select the Alarms tab; then use the slider bars to change the alarm settings.
Chapter 2. Using the Tablet

Using power options – Windows XP

Checking battery power status

In the Power Options Properties window (page 58), select the Power Meter tab. The window shows the amount of power left in the battery.

Selecting power settings

In the Power Options Properties window (page 58), select the Advanced tab; then select the power settings options you want to use.
Enabling Hibernation mode

In the Power Options Properties window (page 58), select the Hibernate tab; then check the Enable Hibernation check box.
Using power options – Windows Vista

Checking battery power status

On the Windows taskbar, click the battery icon.
The following window opens, displaying the percentage of power remaining in the battery:

![Battery Status Window]

Selecting a power plan

1. On the Windows taskbar, click the battery icon.
The following window opens:

![Power Plan Window]

2. Select one of the following power plans:
   - Balanced – A balance between computer performance and battery life.
   - Power Saver – Longer battery life and lower performance.
   - High performance – Higher performance and shorter battery life.
Chapter 2. Using the Tablet

Using power options – Windows Vista

Selecting power options

1. On the Windows taskbar, right-click the battery icon.
2. Select Power Options.
   The following window opens.

   ![Power Options Window]

3. Under the selected power plan, press Change plan settings.
4. Select the power options you want to use.
Using power options – Windows Vista

Selecting Power (On/Off)/Backlight(On/Off)/Resume button options

To change what happens when you press the button:

1. On the Windows taskbar, right-click the battery icon.
2. Select Power Options.

The following window opens.

3. Press Choose what the power buttons do.
4. Select the options you want to use.
Chapter 2. Using the Tablet

Using power options – Windows Vista

Tips for conserving battery power

The following tips help you extend the life of your battery by conserving battery power:

■ Use an external power source such as the AC or auto adapter whenever available.

■ Suspend operation if you know that you will not be using the system for a while. (See “Suspending operation” on page 34.)

■ If you do not plan to use the computer for an extended period of time, turn it off.

Note: If your computer is running Windows XP, you also have the option of placing it in Hibernation mode. (See “Enabling Hibernation mode” on page 61.)

■ Adjust power options to automatically conserve power. (See “Using power options – Windows XP” on page 58 or “Using power options – Windows Vista” on page 62.)
Chapter 2. Using the Tablet

Accessing the hard disk drive compartment

When you install a new hard disk drive, follow the instructions in this section to access the hard disk drive compartment.

**WARNING** Failure to follow this procedure can result in damage to the case and the cover, which is not covered under the Xplore Technologies warranty. Xplore recommends that you use an approved Xplore Technologies service center for this procedure.

1. Turn off the computer.
2. Remove all power from the unit, including batteries and other power sources such as power supplies, cigarette lighter adapters, and mobile power sources.
3. Use an M1 Phillips screwdriver to remove the 10 screws from the compartment cover. (Do not use a power screwdriver.)
Re-installing the hard disk drive compartment cover

1. Make sure the sealing gasket is properly placed.
2. Reposition the cover on the compartment.
3. Use the M1 Phillips screwdriver and a torque wrench to replace the 10 screws.

   **Notes:** Use a maximum torque of 3 kg-cm (2.6 lb-in) for each screw.

   Do not use power tools.
Chapter 2. Using the Tablet

Accessing the PCMCIA compartment

Accessing the PCMCIA compartment

Note: This compartment can handle most PCMCIA cards, but additional equipment may be required for some items to function with the computer.

When you install a PCMCIA card, follow the instructions in this section to access the PCMCIA compartment.

**WARNING** Failure to follow this procedure can result in damage to the case and the cover, which is not covered under the Xplore Technologies warranty. Xplore recommends that you use an approved Xplore Technologies service center for this procedure.

1. Turn off the computer.
2. Remove all power from the unit, including batteries and other power sources such as power supplies, cigarette lighter adapters, and mobile power sources.
3. Remove the battery. (See “Removing and installing the battery” on page 55.)
4. Use an M1 Phillips screwdriver to remove the 6 screws from the compartment cover. (Do not use a power screwdriver.)
Re-installing the PCMCIA compartment cover

1. Make sure the sealing gasket is properly placed.
2. Reposition the cover on the compartment.
3. Use the M1 Phillips screwdriver and a torque wrench to replace the 6 screws.

   **Notes:** Use a maximum torque of 3 kg-cm (2.6 lb-in) for each screw.

   Do not use power tools.
Chapter 2. Using the Tablet

Programming hot keys

Xplore pre-programs the P1, P2, and P3 hot keys and Function mode hot key combinations to perform certain functions by default. However, you can program them to perform different functions, as described in this section.

Table 5  Programmable hot keys

<table>
<thead>
<tr>
<th>Key</th>

<tr>
<td>Fn P3</td>
<td>iX104C4 Dual Mode: Selects the input device (see page 38).</td>
</tr>
<tr>
<td>Fn P3</td>
<td>Starts the pen calibration program.</td>
</tr>
</tbody>
</table>
Programming hot keys to start applications, open documents, or go to a Web site

1. In the Status area of the Windows taskbar, click the iX104C4 Configuration icon. The Launch Button QuickShow dialog box opens.

2. Click the Configure button. The Panel Control Center window opens.
Chapter 2. Using the Tablet

Programming hot keys

3. Click the Change button next to the key or key combination you want to program.

   The following options appear:

   ![Image of Panel Control Center]

4. Click Launch an Application, Document or Web site.

   The following options appear:

   ![Image of Panel Control Center]
5. To start an application:
   a. Click Launch an Application.
   b. Press Browse to find the application you want the hot key or Function mode hot key combination to start (for example: word.exe, notepad.exe, excel.exe).
   c. Click Change.

6. To open a document:
   a. In the Click Open a Document.
   b. Press Browse to find the document you want the hot key or Function mode hot key combination to open. (For example: spreadsheet.xls, airports.doc, wiringdiagram.jpg)
   c. Click Change.
Chapter 2. Using the Tablet

Programming hot keys

7. To open a multimedia file:
   a. Click Open a Multimedia file.
   b. Press Browse to find the name of the multimedia file you want the hot key or Function mode hot key combination to open. (For example: 911training.dir, demo.ppt)
   c. Click Change.

8. To open a Web page:
   a. Click Open a Web page.
   b. Press Browse to find the URL of the Web page you want the hot key or Function mode hot key combination to open. (For example: http://www.xploretech.com)
   c. Click Change.

9. Program more hot keys, or click Close to close the Panel Control Center window.
Programming hot keys to perform pre-defined functions

1. In the Status area of the Windows taskbar, click the iX104C4 Configuration icon.

   The Launch Button QuickShow dialog box opens.

   ![Launch Button Quickshow dialog box]

2. Click the Configure button.

   The Panel Control Center window opens.

   ![Panel Control Center window]

3. Next to the key or key combination you want to program, click the Change button.
Chapter 2. Using the Tablet

Programming hot keys

The following options appear:

4. Click Start a pre-defined function.
5. In the Function selection drop-down list, select an option.

6. Program more hot keys, or click Close to close the Panel Control Center window.
Chapter 2. Using the Tablet

Programming hot keys

Programming hot keys to perform other key functions

1. In the Status area of the Windows taskbar, click the iX104C⁴ Configuration icon.

   The Launch Button QuickShow dialog box opens.

2. Click the Configure button.

   The Panel Control Center window opens.

3. Next to the key or key combination you want to program, click the Change button.
Chapter 2. Using the Tablet

Programming hot keys

The following options appear:

![Diagram](image1.png)

4. Click Press a key or key combination.

The following options appear:

![Diagram](image2.png)
5. If you want the hot key or hot key combination to perform the function of a single key:
   a. If the Ctrl, Alt, or Shift boxes are checked, uncheck them.
   b. Click the key you want the hot key or hot key combination to perform. (For example: F6, G, or Caps Lock)

   If you want the hot key or hot key combination to perform the function of a key combination:
   a. Check the Ctrl, Alt, or Shift box.
   b. From the drop-down list, select the additional key, or click the key on the keyboard.

   Examples
   To cause the hot key to perform the print screen function (Alt-Print Scrn): Check the Alt check box; then select PrtSc from the drop-down list.

   To cause the hot key to perform the paste function (Ctrl-V): Check the Ctrl check box; then click the V key.

6. Program more hot keys, or click Close to close the Panel Control Center window.
3 Maintaining the Tablet

This chapter provides instructions for maintaining your tablet.

Caring for the tablet

This section provides information about how to keep your tablet in top working condition.

Checking power cords and connectors

Check AC and DC power cords and power connectors periodically for damage. Replace the power cord immediately if you find any damage.

Protecting the computer from damage

- Your computer is designed to sustain a multiple-axis drop to a non-yielding surface. Do not intentionally drop the computer, because the cumulative effects of multiple drops may damage the computer.
- Do not place heavy objects on the computer.
- Do not disassemble the computer.
- Keep the computer at least 5 inches (13 centimeters) away from any electrical appliance that generates a strong magnetic field, such as a motor, magnet, TV, refrigerator, or large audio speakers.
Preventing the computer from overheating

The computer monitors its internal temperature. As the internal temperature approaches the tolerable limits of heat-sensitive components, system functions are automatically limited or turned off to prevent damage.

To prevent the computer from overheating, do not obstruct the computer’s air vents.
Chapter 3. Maintaining the Tablet

Caring for the tablet

Storing the computer

You can store the computer in the Off state for about 30 days with a fully charged battery installed. After this period, recharge the battery or replace it with a charged battery.

If you intend to store the computer for more than 30 days, remove the battery pack and keep it in a cool place.

Caring for the display screen

To clean the display screen, dampen a soft cotton cloth with water and gently wipe the screen surface.

Note: Do not use isopropyl alcohol to clean the screen. Alcohol may damage the surface of the screen.

Protecting the display screen

The screen protector is a durable, replaceable writing surface that protects the display screen from abrasion.

To obtain additional screen protectors, check with your reseller, or go to the Xplore Web site at www.xploretch.com for ordering information. Additional information about installation is included with the screen protectors.
Chapter 3. Maintaining the Tablet

When to replace the pen

**Removing the screen protector**

Slide your fingernail under the edge of the screen protector and pull the protector away from the screen.

**Installing a new screen protector**

Follow the instructions included with your screen protector replacement kit.

**Note:** If a screen protector is already installed on the display screen, remove it before installing the new screen protector.

**When to replace the pen**

With use, the pen tip may become worn and can scratch the screen. If your pen exhibits one of the following problems, replace the pen:

- The pen does not move freely across the screen.
- The pen does not perform as expected.
Calibrating the digitizer

Calibrating the digitizer adjusts the cursor position on the screen relative to the position of the pen tip or finger. Calibrate the digitizer to adjust the distance error between where the pen or finger is actually touching the screen and where the computer is registering the pen or finger touch.

You may need to calibrate the digitizer in the following situations:

- You are using the computer for the first time.
- The previous user of the computer writes with the opposite hand or at a different pen angle.
- The computer has not been used for some time.
- The computer has been serviced.
Calibrating the digitizer: iX104C4 – Windows XP

Follow these instructions if your computer is running Windows XP.

1. From the Start menu, select Control Panel.
   The Control Panel opens.

2. Click the Tablet and Pen Settings icon.
   The Tablet and Pen Settings window opens.
3. In the Calibration area drop-down list, select the mode for which you want to calibrate the pen: Landscape or Portrait; then click Calibrate.

   The Calibration program starts.

4. Follow the instructions that appear on the screen.

5. When you finish, click OK.
Chapter 3. Maintaining the Tablet

Calibrating the digitizer

Calibrating the digitizer: iX104C4 – Windows Vista

Follow these instructions if your computer is running Windows Vista.

1. From the Start menu, select Control Panel.

The Control Panel opens.

2. Double-click the Tablet PC Settings icon.

The Tablet PC Settings window opens.
3. In the General tab, press the Calibrate button.
4. Follow the instructions that appear on the screen.
5. When you finish, click OK.
6. 
Calibrating the digitizer: iX104C4 Dual Mode – Windows XP

Follow these instructions if your computer is running Windows XP.

In Active mode, you can use only the stylus included with the computer as the pointing device.

In Touch mode, you can use the stylus, a similar pointing device, or your finger.

Follow the instructions in the sections below to calibrate the digitizer for each mode.

Calibrating the digitizer: Active mode

1. From the Start menu, select Control Panel.

   The Control Panel opens.

2. Click the Tablet and Pen Settings icon.

   The Tablet and Pen Settings window opens.
3. In the Calibration area drop-down list, select the mode for which you want to calibrate the pen: Landscape or Portrait; then click Calibrate.

The Calibration program starts.

4. Follow the instructions that appear on the screen.

5. When you finish, click OK.
Chapter 3. Maintaining the Tablet

Calibrating the digitizer

Calibrating the digitizer: Touch mode

1. From the Start menu, select All Programs > Touch Utility. The Touch Utility window opens.

2. Click the appropriate Calibration button.

Note: Xplore Technologies recommends 5 Pt or 9 Pt calibration, for greater accuracy.

The Calibration program starts.

3. Follow the instructions that appear on the screen.

4. When you finish, click OK.
Calibrating the digitizer: iX104C4 Dual Mode – Windows Vista

Follow these instructions if your computer is running Windows Vista.
In Active mode, you can use only the stylus included with the computer as the pointing device.
In Touch mode, you can use the stylus, a similar pointing device, or your finger.
Follow the instructions in the sections below to calibrate the digitizer for each mode.

**Calibrating the digitizer: Active mode**

1. From the Start menu, select Control Panel.
   
The Control Panel opens.
2. Double-click the Tablet PC Settings icon.

   ![Tablet PC Settings icon]

   See "Selecting Auto-Sense, Active, or Touch mode" on page 38.
Chapter 3. Maintaining the Tablet

Calibrating the digitizer

The Tablet PC Settings window opens.

3. In the General tab, press the Calibrate button.
   The Calibration program starts.
4. Follow the instructions that appear on the screen.
5. When you finish, click OK.
Calibrating the digitizer: Touch mode

1. From the Start menu, select All Programs > Touch Utility.
   
   The iTouch window opens.

2. Select the Device tab.

3. Select the appropriate calibration button.

   **Note:** Xplore Technologies recommends 5 Pt or 9 Pt calibration, for greater accuracy.

4. Press Exit.
Table 7 contains solutions to some problems. If you cannot solve the problem by taking the actions described, contact your local help desk or your reseller for further assistance.

</thead>
</table>
| Display screen is blank or difficult to read.        | • Confirm that the computer is on (the Power icon is displayed continuously in the Status area).  
 • The brightness may be set too low, causing the screen to appear too dark. To change system brightness, press the Fn and Start keys to open the Xplore menu and adjust the brightness. (See page 30.)  
 • An external monitor may be selected. Press the Fn and P1 keys to select the computer display screen. (See page 30.)  
 • The video time-out may have expired. Tap the display screen to reactivate the display.  
   **Note:** This is a normal, power-saving feature.  
 • If the Status light is blinking red, the computer is in Suspend-to-RAM mode because the temperature is below -20°C or above 60°C. When the temperature returns to a safe operating range, the display screen automatically comes back on. If possible, move the computer to a warmer or cooler location.  
 • If the Status light is continually yellow, the computer is in Suspend or Hibernate mode. Press the Power On/Off key to resume. |
| Cursor is not tracking the pen.                       | Calibrate the pen. See “Calibrating the digitizer” on page 85.                                                                                                                                                           |
| Computer is not responding to the pen.               | Connect an external USB keyboard to the computer. If the computer does not respond to the external keyboard, the application or operating system may have been corrupted. Press the Reset key. (See page 32.) If the system responds to a keyboard but not to the pen, contact your local help desk or reseller for further assistance. |
| Headphone or speaker volume is too low.             | • The volume may be in Mute mode or set too low. Follow the instructions in “Adjusting headphone or speaker volume – Windows XP” on page 51.                                                                                     |
|                                                      | • Make sure the volume control in your audio software is set to an audible level.                                                                                                                                       |
| An external device is not working with the computer. | The device may need to be enabled in the computer's configuration program (BIOS Setup). Contact your local help desk or reseller.                                                                                      |
Using BIOS and AOS Functions

This appendix explains how to use the application and navigation buttons with the Basic Input-Output System (BIOS) program and the Advanced Operating System (AOS) Options menu.

Note: These functions are typically for use only by your system administrator or by authorized service technicians.

Appendix B. Using BIOS and AOS Functions

Disabling the Auto Power feature

When Auto Power is enabled, the tablet automatically turns on if you dock it and the following conditions exist:

- The tablet is off or in Hibernation or Standby mode.
- The dock or the tablet is connected to an external power source (including power applied when a vehicle’s ignition is started).

If you dock the tablet and the tablet is off and no power is present, the tablet turns on as soon as power is applied.

To disable the Auto Power feature:

1. When the computer is booting, press the P2 button to access the BIOS Setup Utility.
2. Select the Advanced tab.
3. Disable the Dock with Auto Power On option.

Enabling automatic LCD backlight control

When the LCD backlight control is in manual mode, the ambient light sensor is disabled and the computer does not automatically control the screen brightness.

Follow these steps to enable automatic LCD backlight control:

1. When the computer is booting, press the P2 button to start the BIOS Setup Utility.
2. Select the Main tab.
3. In the LCD Backlight Control drop-down list, select Automatic.
4. Click OK.

Note: When the tablet is in the docking station, it will shut down or go into Hibernation or Standby mode the same as it does when not in the docking station.
Glossary

**Adapter.** A device that provides an interface between two dissimilar electronic devices. For example, the AC adapter modifies the power from a wall outlet for use by the computer.

**Advanced Power Management (APM).** A facility consisting of one or more layers of software that support power management. The APM software interface enables applications, operating systems, device drivers, and the APM BIOS to work together to reduce power consumption.

**Alternating Current (AC).** Electric current that reverses its direction of flow at regular intervals.

**Analog signal.** A signal with characteristics such as amplitude and frequency that vary in proportion to (are an analog of) the value to be transmitted. Voice communications are analog signals.

**Application.** A program that performs specific tasks on your computer, such as word processing or creating spreadsheets.

**BIOS.** Programs that contain such basic hardware operations as an interaction with diskette drives, hard disk drives, and the memory.

**Board.** A circuit board. An internal card containing electronic components called chips, which perform a specific function or increase the capabilities of the system.

**Boot.** To load a program or operating system into system memory.

**Bits Per Second (BPS).** In serial transmission, the instantaneous bit speed with which a device or channel transmits a character.

**Card.** Synonym for board; see board.

**Compact Disk-Read Only Memory (CD-ROM).** Stores data on metal-plated plastic discs.
Compatibility. 1. The ability of one computer to accept and process data in the same method as another computer without modifying the data or the media upon which it is being transferred. 2. The ability of one device to connect or communicate with another system or component.

Configuration. The specific combination of hardware components of the computer, and their operating status. The configuration of your computer includes pre-defined memory, type and speed of microprocessor, type of and size of hard disk drive, etc.

Default. The preset parameter value automatically selected by the computer when you or a program do not provide instructions.

Device driver. A program that controls communication between a specific peripheral device (such as a printer or the pen/stylus) and the computer.

Disk drive. The physical device that enables the computer to read from, and write to, a disk.

Display. An image-producing device used to view computer output.

Double-click. To press and release the pen/stylus twice within a time frame you define, without moving the pointer off the choice.

Hard disk drive (HDD). A sealed mass storage device used for storage and fast retrieval of programs and data. The factory installs this disk and only a trained engineer can remove it for servicing.

Hardware. The physical electronic and mechanical components of a computer system. Typically, the computer itself, CPU, memory, etc.

Hertz. A unit of wave frequency that equals one cycle per second.

Interface. 1. Hardware and/or software components used specifically to connect one computer or device to another. 2. To physically connect one system or device to another to exchange information. 3. The point of contact between user, the computer, and the program (for example, the pen/stylus or a menu).
Kilobyte (KB). A unit of 1024 bytes measuring storage space, typically in memory or on storage media such as a diskette or hard disk drive.

Local area network (LAN). Assembly of separate computers into an integrated network that connects the various computers together and to common devices such as printers and fax machines.

Light Emitting Diode (LED). A semiconductor device that emits light when a current is applied.

Liquid Crystal Display (LCD). Liquid crystal sealed between two sheets of glass coated with transparent conducting material. Applying a voltage between the glass sheets darkens the liquid crystal to provide contrast to lighted portions of the display.

Megabyte (MB). A unit of data storage equal to 1024 kilobytes.

Megahertz (MHz). A unit of wave frequency that equals 1 million cycles per second.

Modem. A device that connects your computer to a telephone line, allowing it to communicate with another computer at another location.

PC Card. A plug-in accessory card that conforms to the PCMCIA standard.

Pen. See stylus.

Peripheral device. An input/output device that is external to the central processor and/or main memory such as a printer or scanner.

Pixel. Picture elements (tiny dots) that compose a screen image.

Port. The electrical connection through which the computer sends and receives data to and from devices or other computers.

Program. A set of instructions a computer can execute to tell the system what to do and how to do it.

Random Access Memory (RAM). A hardware component of your computer that temporarily stores active program code and data.
Reset. The act of hard stopping/shutting down the operating system.

Resolution. The number of pixels displayed on the screen. A higher resolution provides greater clarity and allows more information to be displayed on the screen at once.

Restart. Resetting a computer without turning it off (also called warm boot or soft reset).

Resume. The act of returning the computer to an active, operational state.

Read Only Memory (ROM). The portion of your computer’s memory that contains permanent instructions, and which cannot be modified.

Status Indicator (LED). A light above the LCD screen which indicates the current status of a particular device or hardware component.

Stylus. A writing instrument. For pen computers, the stylus is used to interface with the LCD and digitizer.

Subscriber Identity Module (SIM). A smart card inside a GSM (Global System for Mobile communications) cellular device that encrypts voice and data transmissions and stores data about the specific user so that the user can be identified and authenticated by the network supplying the phone service. A SIM can be moved from one device to another and/or different SIMS can be inserted into any GSM radio.

Suspend mode. A power conservation mode in which electrical current is removed from most components of the computer.

Universal Serial Bus (USB). A serial interface that enables communication between devices and the computer.

Agency Notices

FCC notices
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Modifications not expressly approved by Xplore Technologies could void this user’s authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

RF exposure
Tests for SAR are conducted using standard operating positions specified by the FCC with the tablet PC transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the tablet PC while operating can be well below the maximum value. This is because the tablet PC is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.
Before a tablet PC model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government-adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., worn on the body) as required by the FCC for each model. (Body-worn measurements may differ among tablet PC models, depending upon available accessories and FCC requirements). While there may be differences between the SAR levels of various tablet PCs and at various positions, they all meet the government requirement for safe exposure.

This device was evaluated and shown to comply with FCC SAR guidelines. Avoid covering or holding antennas when transmitting. Antenna locations are shown in the following figure.

![Antennas](image)

**Health and Safety Information**

**Exposure to Radio Frequency (RF) Signals**

Your wireless tablet PC is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on the safety standards previously set by both U.S. and international standards bodies:

- American National Standards Institute (ANSI) IEEE. C95.1-1992
International Commission on Non-Ionizing Radiation Protection (ICNIRP) 1996

Ministry of Health (Canada), Safety Code 6. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

The exposure standard for wireless mobile tablet PCs employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg.

Note: In the U.S. and Canada, the SAR limit for mobile tablet PCs used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations.

DOC (Industry Canada Notices)

Notice to Users of Radio and Television

This Class B digital apparatus meets all requirements of Canadian Interference-Causing Equipment Regulations

CET appareil numérique de la class B respecte toutes les exigence du Règlement sur le matériel brouilleur du Canada.

Notice to Users of the Canadian Telephone Network

Note: This equipment meets the applicable Industry Canada Terminal Equipment Technical Specifications. This is confirmed by the registration number. The abbreviation, IC, before the registration number signifies that registration was performed based on a Declaration of Conformity indicating that Industry Canada technical specifications were met. It does not imply that Industry Canada approved the equipment.

Before connecting this equipment to a telephone line the user should ensure that it is permissible to connect this equipment to the local telecommunication facilities. The user should be aware that compliance with the certification standards does not prevent service degradation in some situations.

Repairs to telecommunication equipment should be made by a Canadian authorized maintenance facility. Any repairs or alterations not expressly approved by Xplore or any equipment failures may give the telecommunication company cause to request the user to disconnect the equipment from the telephone line.
Appendix E. Agency Notices

Notice: The Ringer Equivalence Number (REN) for this terminal equipment is 0.0. The REN assigned to each terminal equipment provides an indication of the maximum number of terminals allowed to be connected to a telephone interface. The termination on an interface may consist of any combination of devices subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed five.

UL Notice
This unit requires an AC adapter to operate. Use only UL Listed Class 2 Adapters with an output rating of 19 VDC, with a current of 3.75 A. AC Adapter output polarity:

⚠️ For authorized repair technicians only

WARNING
For continued protection against risk of fire, replace only with the same type and rating fuse.

WARNING
Danger of explosion if Lithium (clock) battery is incorrectly replaced. Replace only with the same equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer’s instruction.

System disposal
In the event of system disposal, observe the following information regarding proper procedures in the State of Vermont.
The liquid crystal display (LCD) lamps used in this system contain mercury. In the event of system disposal, be sure to follow local guidelines.
Configuring Dual Mode Tablet Digitizer
Input Methods

This section explains how to use the BIOS Setup Utility and the Panel Control Center to configure the iX104C4 Dual Mode tablet digitizer input settings.

- Use the **BIOS Setup Utility** to set the default input method.
- Use the **Panel Control Center** to set controls for temporary changes to input methods for single sessions.

The section “Summary: Dual Mode digitizer input method settings” on page 121 provides an overview of settings to make in the BIOS Setup Utility and the Panel Control Center to achieve various input method configurations.

The section “Sample implementations” on page 126 explains how to set up two sample configurations.
Appendix F. Configuring Dual Mode Tablet Digitizer Input Methods

Using the BIOS Setup Utility to set input method defaults

Using the BIOS Setup Utility to set input method defaults

Starting the BIOS Setup Utility

If your computer is running Windows XP:

When the computer is starting up, press the P2 key.

If your computer is running Windows Vista:

From the Start menu, select BIOS Setup Utility.

The BIOS Setup Utility window opens.

In this appendix, Windows Vista screens are shown. If your computer is running Windows XP, your screens look a little different.
Selecting the digitizer input method

1. Select the Startup Configuration tab.

2. In the Digitizer Selection field, select the value from the drop-down list as follows:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
</table>
| Auto         | Enables automatic sensing (Auto Sense) of inputs from touch and from the active pen.  
              | **Note**: This is the default setting. |
| Touch Only   | Enables touch input only. Active digitizer, pen inputs, and Auto Sense are all disabled. |
| Digitizer Only | Enables inputs from the active pen only. Touch input and Auto Sense are disabled. |
### Setting digitizer input method security

Follow these steps to specify whether the tablet user can change the digitizer input method settings:

1. In the BIOS Setup Utility, select the Password tab.
2. In the Password Setting field, select a value from the drop-down list as follows:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>No passwords set</td>
<td>Anyone can change the digitizer input settings.</td>
<td>This setting is not controlled by Windows User groups.</td>
</tr>
<tr>
<td>Supervisor password set only</td>
<td>A supervisor password must be entered in order to change the input settings.</td>
<td>The supervisor password must be entered before the BIOS Setup Utility will open.</td>
</tr>
<tr>
<td>User password set</td>
<td>The user cannot change the input settings.</td>
<td>Only the supervisor can change the input settings.</td>
</tr>
</tbody>
</table>

3. Click OK.
4. Reboot the computer.
Appendix F. Configuring Dual Mode Tablet Digitizer Input Methods

Using the Panel Control Center to configure temporary changes to the input method

Using the Panel Control Center to configure temporary changes to the input method

The Panel Control Center enables you to configure temporary, session-based changes to the Dual Mode tablet input method.

Notes:
Administrator rights are not required to make temporary settings.

When the tablet is restarted, the temporary settings are lost and the default values set in the BIOS Setup Utility are restored.

1. In the Windows taskbar, click the Panel Control Center icon.

2. Click the Configure button.

3. Click the Change button next to the P key for the function you want to change.

4. Check Start a pre-defined function; then click Next.
Appendix F. Configuring Dual Mode Tablet Digitizer Input Methods

Using the Panel Control Center to configure temporary changes to the input method

5. From the drop-down list, select Digitizer Selection or Touch Panel Toggle.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Digitizer Selection</td>
<td>If the digitizer input method is set to Auto in the BIOS Setup Utility, toggles from Auto to Digitizer Only to Touch Only.</td>
</tr>
<tr>
<td>Touch Panel Toggle</td>
<td>If the digitizer input method is set to Auto or Touch Only in the BIOS Setup Utility, temporarily disables touch only.</td>
</tr>
</tbody>
</table>

6. Click Close.
Summary: Dual Mode digitizer input method settings

Sample implementations

This section provides settings for two sample configurations. See “Using the BIOS Setup Utility to set input method defaults” on page 116 and “Using the Panel Control Center to configure temporary changes to the input method” on page 119 for information about how to make the settings.

**Sample 1**

To set the tablet to the following configuration:

- Default digitizer input control is **Touch only**.
- The user can turn off the touch screen.
- The user cannot change any digitizer input control settings.

Configure settings as follows:

1. Use the BIOS Setup Utility to set a Supervisor password. (This protects the digitizer selection and all other BIOS Setup Utility controls.)
2. In Windows Administrator mode, use the Panel Control Center to set one of the P keys to **Touch Panel Toggle**.
3. Use the **Add new user** function to create a user account.

**Note:** If the user already exists, the setting the administrator has set replicates to all the users of the computer.

**Sample 2**

To set the tablet to the following configuration:

- Default digitizer input control is **Auto Sense**.
The user can temporarily change the digitizer input control settings.

The user can change the default digitizer input control settings.

Configure settings as follows:

1. Do not use the BIOS Setup Utility to set a Supervisor password.
2. Use the Panel Control Center to set one of the P keys to Digitizer Selection.
3. Use the Add new user function to create a user account.

Note: If the user already exists, the setting the administrator has set replicates to all the users of the computer.
